# Introduction

## Overview

The CLI is divided into various modes. Each mode has a group of commands available in it.

Users are assigned privilege levels. Each privilege level can access the CLI modes permitted to that level. User privilege levels are described in the section below.

## User (Privilege) Levels

Users may be created with one of the following user levels:

- Level 1 – Users with this level can only run User EXEC mode commands. Users at this level cannot access the web GUI.
- Level 7 – Users with this level can run commands in the User EXEC mode and a subset of commands in the Privileged EXEC mode. Users at this level cannot access the web GUI.
- Level 15 – Users with this level can run all commands. Only users at this level can access the web GUI.

A system administrator (user with level 15) can create passwords that allow a lower level user to temporarily become a higher level user. For example, the user may go from level 1 to level 7, level 1 to 15, or level 7 to level 15.

## CLI Command Modes

The Command Line Interface (CLI) is divided into four command modes. The command modes are (in the order in which they are accessed):

- User EXEC mode
- Privileged EXEC mode
- Global Configuration mode
- Interface Configuration mode

Each command mode has its own unique console prompt and set of CLI commands. Entering a question mark at the console prompt displays a list of available commands for the current mode and for the level of the user. Specific commands are used to switch from one mode to another. Users are assigned privilege levels that determine the modes and commands available to them.

## User EXEC Mode

Users with level 1 initially log into User EXEC mode. User EXEC mode is used for tasks that do not change the configuration, such as performing basic tests and listing system information.

The user-level prompt (default host name) is the switch's model name followed by a #. Eg.

EGS7228P#

The default host name can be changed via the hostname command in Global Configuration mode.

## Privileged EXEC Mode

A user with level 7 or 15 automatically logs into Privileged EXEC mode. Users with level 1 can enter Privileged Exec mode by entering the enable command and when prompted, the password for level 15.

To return from the Privileged EXEC mode to the User EXEC mode, use the disable command.

## Global Configuration Mode

The Global Configuration mode is used to run commands that configure features at the system level, as opposed to the interface level. Only users with command level of 7 or 15 can access this mode. To access Global Configuration mode from Privileged EXEC mode, enter the configure command at the Privileged EXEC mode prompt and press Enter. The Global Configuration mode prompt, consisting of the device host name followed by (config)#, is displayed:

EGS7228P(config)#

Use any of the following commands to return from Global Configuration mode to the Privileged EXEC mode:

- exit
- end
- Ctrl+Z

## Interface or Line Configuration Modes

Various submodes may be entered from Global Configuration mode. These submodes enable performing commands on a group of interfaces or lines. For instance to perform several operations on a specific port or range of ports, you can enter the Interface Configuration mode for that interface.

The following submodes are available:

- **Interface** – Contains commands that configure a specific interface (port, VLAN, port channel, or tunnel) or range of interfaces. The Global Configuration mode command `interface` is used to enter the Interface Configuration mode. The `interface` Global Configuration command is used to enter this mode.
- **Line Interface** – Contains commands used to configure the management connections for the console, Telnet and SSH. These include commands such as line timeout settings, etc. The `line` Global Configuration command is used to enter the Line Configuration command mode.
- **VLAN Database** – Contains commands used to configure a VLAN as a whole. The `vlan` database Global Configuration mode command is used to enter the VLAN Database

Interface Configuration mode.

- **Management Access List** – Contains commands used to define management access-lists. The `management access-list` Global Configuration mode command is used to enter the Management Access List Configuration mode.
- **Port Channel** – Contains commands used to configure port-channels; for example, assigning ports to a port-channel. Most of these commands are the same as the commands in the Ethernet interface mode, and are used to manage the member ports as a single entity. The `interface port-channel` Global Configuration mode command is used to enter the Port Channel Interface Configuration mode.
- **QoS** – Contains commands related to service definitions. The `qos` Global Configuration mode command is used to enter the QoS services configuration mode.
- **MAC Access-List** – Configures conditions required to allow traffic based on MAC addresses. The `mac access-list` Global Configuration mode command is used to enter the MAC access-list configuration mode.

To return from any Interface Configuration mode to the Global Configuration mode, use the `exit` command.

## Accessing the CLI

The Switch's serial port's default settings are as follows:

- 115200 baud
- no parity
- 8 data bits
- 1 stop bit

A computer running a terminal emulation program capable of emulating a VT-100 terminal and a serial port configured as above are then connected to the Switch's Console port. With the serial port properly connected to a management computer, press the Enter key and enter the username and password.

## Shortcuts

This table identifies some shortcuts in the CLI.

Key(s)	Description
(up/down arrow keys)	Scrolls through the list of recently-used commands. You can edit any command or press [ENTER] to run it again.
[TAB]	Auto-completes the keyword you are typing if possible. For example, type config, and press [TAB]. The Switch finishes the word configure.
[CTRL]+A	Moves the cursor to the beginning of the command line.
[CTRL]+E	Moves the cursor to the end of the command line.
[CTRL]+U	Clears the current command.
[CTRL]+Z / End	Returns back to the Privileged EXEC mode from any configuration mode.

# Chapter 1

# 802.1X

# **dot1x**

## **Syntax**

dot1x

no dot1x

## **Parameter**

None

## **Default**

Default is disabled

## **Usage**

The “dot1x” command enables the global settings of IEEE 802.1X port-based network access control. Only when it is enabled, can the port-based setting work.

Use the no form of this command to disable.

## **Example**

The following example shows how to enable 802.1X access control on port 1:

```
Switch(config)#
```

```
    dot1x
```

```
switch(config)# interface fa1
```

```
switch(config-if)#
```

```
    dot1x auto
```

```
switch(config-if)#
```

```
    exit
```

```
switch(config)#
```

```
    show dot1x
```

```
802.1x protocol is: Enabled
```

```
802.1x protocol version: 2
```

```
switch(config)#
```

```
    show dot1x interfaces fa1
```

```
Port | Mode | Current State | Reauth Control | Reauth Period
```

```
fa1 Authentication | Initialize | Enabled | 3600
```

```
Quiet Period: 60 Second
```

```
Supplicant timeout: 30 Second
```

```
Max req: 2
```

```
Session Time (HH:MM:SS): 0: 0: 0: 0
```

## Syntax

dot1x (auto|force-auth|force-unauth)

no dot1x

## Parameter

<b>auto</b>	Port control will depends on the outcome of authentication.
<b>force-auth</b>	Force this port to be unconditional authorized.
<b>force-unauth</b>	Force this port to be unconditional unauthorized

## Default

Default is disabled.

## Mode

Interface Configuration

## Usage

The “dot1x” command enables the global settings of IEEE 802.1X port-based network access control. Only when it is enabled can the port-based setting work. Use the no form of this command to disable it.

## Example

The following example shows how to enable 802.1X access control on port 1:

Switch(config)#

dot1x

```
switch(config)#  
    interface fa1  
switch(config-if)#  
    dot1x auto  
switch(config-if)#  
    exit  
switch(config)#  
    show dot1x  
802.1x protocol is: Enabled  
802.1x protocol version: 2  
switch(config)#  
    show dot1x interfaces fa1  
Port | Mode | Current State | Reauth Control | Reauth Period  
fa1 Authentication | Initialize | Enabled | 3600  
Quiet Period: 60 Second  
Supplicant timeout: 30 Second  
Max req: 2  
Session Time (HH:MM:SS): 0: 0: 0: 0
```

# **dot1x Reauthentication**

## **Syntax**

dot1x reauth

no dot1x reauth

## **Parameter**

None

## **Default**

Default is disabled

## **Mode**

Interface Configuration

## **Usage**

Use the “dot1x reauth” command to enable 802.1X periodical reauthentication function on port. Use the no form of this command to disable this function.

## **Example**

The following example shows how to enable 802.1X access control on port 1.

```
switch(config)# i
```

```
nterface fa1
```

```
switch(config-if)#  
    dot1x reauth  
switch(config-if)#  
    exit  
switch(config)#  
    show dot1x  
802.1x protocol is: Enabled  
802.1x protocol version: 2  
switch(config)#  
    show dot1x interfaces fa1  
Port | Mode | Current State | Reauth Control | Reauth Period  
fa1 Authentication | Initialize | Enabled | 3600  
Quiet Period: 60 Second  
Supplicant timeout: 30 Second  
Max req: 2  
Session Time (HH:MM:SS): 0: 0: 0: 0
```

# **dot1x Timeout Reauth-Period**

## **Syntax**

`dot1x timeout reauth-period <30-65535>`

`no dot1x timeout reauth-period`

## **Parameter**

`<30-65535>` Specify the re-authentication period.

## **Default**

3600 seconds

## **Mode**

Interface Configuration

## **Usage**

Use the “`dot1x timeout reauth-period`” command to configure the re- authentication period. Use the `no` form of this command to restore the period to default value.

## **Example**

The example shows how to configure re-authentication period to 300 sec. on port 1

```
switch(config)#
```

```
    interface fa1
```

```
switch(config-if)#  
    dot1x timeout reauth-period 300
```

```
switch(config-if)#  
    exit  
switch(config)#  
    show dot1x interfaces fa1
```

Port | Mode | Current State | Reauth Control | Reauth Period

fa1 Authentication | Initialize | Enabled | 300

Quiet Period: 60 Second

Supplicant timeout: 30 Second

Max req: 2

Session Time (HH:MM:SS): 0: 0: 0: 0

# **dot1x Timeout Quiet-Period**

## **Syntax**

`dot1x timeout quiet-period <0-65535>`

`no dot1x timeout quiet-period`

## **Parameter**

`<0-65535>` Specify the quiet period

## **Default**

60 seconds

## **Mode**

Interface Configuration

## **Usage**

Use the “`dot1x timeout quiet-period`” command to configure the quiet period. Use the `no` form of this command to restore the period to its default value.

## **Example**

The example shows how to configure quiet period to 300 sec. on port 1.

```
switch(config)#
```

```
    interface fa1
```

```
switch(config-if)#  
    dot1x timeout quiet-period 300  
switch(config-if)#  
    exit  
switch(config)#  
    show dot1x interfaces fa1  
  
Port | Mode | Current State | Reauth Control | Reauth Period  
fa1 Authentication | Initialize | Enabled | 3600  
Quiet Period: 300 Second  
Supplicant timeout: 30 Second  
Max req: 2  
Session Time (HH:MM:SS): 0: 0: 0: 0
```

# **dot1x Timeout Supp-Timeout**

## **Syntax**

`dot1x timeout supp-timeout <1-65535>`

`no dot1x timeout quiet-period`

## **Parameter**

`<1-65535>` Specify the supplicant period.

## **Default**

30 seconds

## **Mode**

Interface Configuration

## **Usage**

Use the “`dot1x timeout supp-timeout`” command to configure the supplicant period. Use the `no` form of this command to restore the period to default value

## **Example**

The example shows how to configure supplicant period to 300 sec. on port 1.

```
switch(config)#
```

```
    interface fa1
```

```
switch(config-if)#  
    dot1x timeout supp-timeout 300  
switch(config-if)#  
    exit  
switch(config)#  
    show dot1x interfaces fa1  
  
Port | Mode | Current State | Reauth Control | Reauth Period  
fa1 Authentication | Initialize | Enabled | 3600  
Quiet Period: 60 Second  
Supplicant timeout: 300 Second  
Max req: 2  
Session Time (HH:MM:SS): 0: 0: 0: 0
```

# **dot1x Timeout Max-Req**

## **Syntax**

`dot1x max-req <1-10>`

`no dot1x max-req`

## **Parameter**

`<1-10>` Specify the maximum request retries.

## **Default**

2 times

## **Mode**

Interface Configuration

## **Usage**

Use the “`dot1x timeout supp-timeout`” command to configure the supplicant period. Use the `no` form of this command to restore the period to its default value.

## **Example**

The example shows how to configure maximum request retries to 4 times on port 1.

```
switch(config)#
```

```
    interface fa1
```

```
switch(config-if)#  
    dot1x max-req 4  
switch(config-if)#  
    exit  
switch(config)#  
    show dot1x interfaces fa1  
  
Port | Mode | Current State | Reauth Control | Reauth Period  
fa1 Authentication | Initialize | Enabled | 3600  
Quiet Period: 60 Second  
Supplicant timeout: 30 Second  
Max req: 4  
Session Time (HH:MM:SS): 0: 0: 0: 0
```

# **dot1x Guest VLAN**

## **Syntax**

```
dot1x guest-vlan <1-4094>
```

```
no dot1x guest-vlan
```

## **Parameter**

<1-4094> Specify VLAN ID to enable 802.1X guest vlan

## **Default**

Default is disabled

## **Mode**

Global Configuration

## **Usage**

Use the `dot1x guest-vlan` command to globally enable the guest VLAN function. Use the `no` form of this command to disable the guest VLAN function. For a port to become a member of the guest VLAN after an authentication failure, you should also enable guest VLAN on that port.

## **Example**

The example shows how to configure VLAN 2 as guest VLAN and enable guest VLAN on port 1.

```
switch(config)#
```

```
dot1x guest-vlan 2
```

```
switch(config)#  
    interface fa1  
switch(config-if)#  
    dot1x auto  
switch(config-if)#  
    dot1x guest-vlan  
switch(config-if)#  
    exit  
switch(config)#  
    show dot1x guest-vlan
```

Guest VLAN ID: 2

Port | Guest VLAN | In Guest VLAN

fa1 | Enabled | No

fa2 | Disabled | ---

fa3 | Disabled | ---

fa4 | Disabled | ---

fa5 | Disabled | ---

fa6 | Disabled | ---

fa7 | Disabled | ---

# Show dot1x

## Syntax

show dot1x

## Parameter

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use "show dot1x" command to show dot1x enabling status.

## Example

This example shows how to show the dot1x enabling status.

Switch#

```
show dot1x
```

802.1x protocol is: Disabled

802.1x protocol version: 2

# Show dot1x Authentication-Hosts

## Syntax

```
show dot1x auth-hosts
```

## Parameter

None

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “show dot1x auth-hosts” command to show all dot1x authorized hosts.

## Example

This example shows how to show the dot1x authorized hosts.

Switch#

```
show dot1x auth-hosts
```

User Name | Port | Session Time |

Authentication Method | MAC Address

8389\_1 | FE3 | 0: 0: 0:20 |

Remote | 00:16:E6:D5:5C:19

# Show dot1x Interface

## Syntax

```
show dot1x interface IF_PORTS
```

## Parameter

*IF\_PORTS* Select port to show dot1x configurations.

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use "show dot1x interfaces" command to show dot1x information of the specified port.

## Example

This example shows how to show dot1x configurations on interface fa1.

Switch#

```
show dot1x interfaces fa1
```

Port | Mode | Current State | Reauth Control | Reauth Period

fa1 | 802.1X Disabled | - | Enabled |

3600

Quiet Period: 60 Second

Supplicant timeout: 30 Second

Max req: 2

Session Time (HH:MM:SS): 0: 0: 0: 0

# Show dot1x Guest VLAN

## Syntax

```
show dot1x guest-vlan
```

## Parameter

None

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “show dot1x guest-vlan” command to show dot1x guest-vlan status.

## Example

This example shows how to show the dot1x guest-vlan status.

```
Switch#: show dot1x guest-vlan
```

Guest VLAN ID: 2

This example shows how to show the dot1x guest-vlan status.

Switch#

```
show dot1x guest-vlan
```

Guest VLAN ID: 2

# Chapter 2

## AAA

# AAA Authentication

## Syntax

```
aaa authentication (login | enable) (default | LISTNAME) METHODLIST[METHODLIST] [METHODLIST] [METHODLIST]  
no aaa authentication (login | enable) LISTNAME
```

## Parameter

login	Add/Edit login authentication list
enable	Add/Edit enable authentication list
default	Edit default authentication list
<i>LISTNAME</i>	Specify the list name for authentication type
<i>METHODLIST</i>	Specify the authenticate method, including none, local, enable, tacacs+, radius.

## Default

Default authentication list name for type login is “default” and default method is “local”.

Default authentication list name for type enable is “default” and default method is “enable”

## Mode

Global Configuration

## Usage

Login authentication is used when user try to login into the switch. Such as CLI login dialog and WEBUI login web page. Enable authentication is used only on CLI for user trying to switch from User EXEC mode to Privileged EXEC mode. Both of them support following authenticate methods.

**Local:** Use local user account database to authenticate. (This method is not supported for enable authentication)

**Enable:** Use local enable password database to authenticate.

**Tacacs+:** Use remote Tacacs+ server to authenticate.

**Radius:** Use remote Radius server to authenticate.

**None:** Do nothing and just make user to be authenticated.

Each list allows you to combine these methods with different orders. For example, If you want to authenticate a login user with the remote Tacacs+ server, but server may have crashed, you'll need a backup plan, such as another Radius server. You can configure the list with the Tacacs+ server as the first authentication method and the Radius server as a second one. Use the no form to delete the existing list. However, the "default" list is not allowed to be removed.

### **Example**

This example shows how to add a login authentication list to authenticate with order tacacs+, radius, local.

```
Switch(config)#
```

```
    aaa authentication login test1
```

```
        tacacs+ radius local
```

This example shows how to show existing login authentication lists

```
Switch#
```

```
    show aaa authentication login lists
```

```
Login List Name | Authentication Method List
```

```
default | local
```

```
test1 | tacacs+ radius local
```

This example shows how to add an enable authentication list to authenticate with order tacacs+, radius, enable.

Switch(config)#

```
aaa authentication enable test1
```

```
tacacs+ radius enable
```

This example shows how to show existing enable authentication lists

Switch#

```
show aaa authentication login lists
```

```
Enable List Name | Authentication Method List
```

```
default | enable
```

```
test2 | tacacs+ radius enable
```

# Login Authentication

## Syntax

login authentication LISTNAME

no login authentication

## Parameter

LISTNAME Specify the login authentication list name to use.

## Default

Default login authentication list for each line is "default".

## Mode

Line Configuration

## Usage

Different access methods are allowed to bind different login authentication lists. Use "login authentication" command to bind the list to specific line (console, telnet, ssh).

Use no form to bind the "default" list back.

## Example

This example shows how to create a new login authentication list and bind to telnet line.

Switch(config)#

```
aaa authentication login test1
```

```
tacacs+ radius local
```

```
Switch(config)#
```

```
    line telnet
```

```
Switch(config-line)#
```

```
        login authentication test1
```

This example shows how to show line binding lists.

```
Switch#
```

```
    show line lists
```

```
Line Type | AAA Type | List Name
```

```
console | login | default
```

```
| enable | default
```

```
| exec | default
```

```
| commands | default
```

```
| accounting-exec | default
```

```
telnet | login | test1
```

```
| enable | default
```

```
| exec | default
```

```
| commands | default
```

```
| accounting-exec | default
```

```
ssh | login | default  
| enable | default  
| exec | default  
| commands | default  
| accounting-exec | default  
http | login | default  
https | login | default
```

# IP http Login Authentication

## Syntax

```
ip (http | https) login authentication LISTNAME
```

```
no ip (http | https) login authentication
```

<b>http</b>	Bind login authentication list to user access WEBUI with http protocol.
<b>https</b>	Bind login authentication list to user access WEBUI with https protocol.
<b>LISTNAME</b>	Specify the login authentication list name to use.

## Default

Default login authentication list for each line is "default".Mode

## Mode

Global Configuration

## Usage

Different access methods are allowed to bind different login authentication lists. Use the "ip (http | https) login authentication" command to bind the list to WEBUI access from http or https. Use no form to bind the "default" list back.

## Example

This example shows how to create two new login authentication lists and bind to http and https.

This example shows how to create two new login authentication lists and bind to http and https.

```
Switch(config)#
  aaa authentication login test1
    tacacs+ radius local
Switch(config)#
  aaa authentication login test2
    radius local
Switch(config)#
  ip http login authentication test1
Switch(config)#
  ip https login authentication test2
```

This example shows how to show line binding lists.

```
Switch#
  show line lists
Line Type | AAA Type | List Name
console | login | default
| enable | default
| exec | default
```

```
| commands | default
| accounting-exec | default
telnet | login | default
| enable | default
| exec | default
| commands | default
| accounting-exec | default
ssh | login | default
| enable | default
| exec | default
| commands | default
| accounting-exec | default
http | login | test1
https | login | test2
```

# Enable Authentication

## Syntax

enable authentication LISTNAME

no enable authentication

## Parameter

*LISTNAME* Specify the enable authentication list name to use.

## Default

Default enable authentication list for each line is “default”.

## Mode

Line Configuration

## Usage

Different access methods are allowed to bind different enable authentication lists. Use the “enable authentication” command to bind the list to specific line (console, telnet, ssh). Use no form to bind the “default” list back.

## Example

This example shows how to create a new enable authentication list and bind it to the telnet line.

Switch(config)#

```
aaa authentication enable test1
```

```
tacacs+ radius enable
```

```
Switch(config)#  
  line telnet  
Switch(config-line)#  
    enable authentication test1  
  
This example shows how to show line binding lists.  
  
Switch#  
  show line lists  
  
Line Type | AAA Type | List Name  
console | login | default  
| enable | default  
| exec | default  
| commands | default  
| accounting-exec | default  
telnet | login | default  
| enable | test1  
| exec | default  
| commands | default  
| accounting-exec | default  
ssh | login | default
```

| enable | default  
| exec | default  
| commands | default  
| accounting-exec | default  
http | login | default  
https | login | default

# Show AAA Authentication

## Syntax

```
show aaa authentication (login | enable) lists
```

## Parameter

<b>login</b>	Show login authentication list
<b>enable</b>	Show enable authentication list

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use “show aaa authentication” command to show login authentication or enable authentication method lists.

## Example

This example shows how to show existing login authentication lists.

Switch#

```
show aaa authentication login lists
```

Login List Name | Authentication Method List

default | local

test1 | tacacs+ radius local

This example shows how to show existing enable authentication lists

Switch#

```
show aaa authentication login lists
```

Enable List Name | Authentication Method List

default | enable

test2 | tacacs+ radius enable

# Show Line Lists

## Syntax

Show line lists

## Parameter

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use the “show line lists” command to show all of the lines’ binding list of all authentication, authorization, and accounting functions.

## Example

This example shows how to show line binding lists.

Switch#

```
show line lists
```

Line Type | AAA Type | List Name

console | login | default

| enable | default

| exec | default

| commands | default

| accounting-exec | default

telnet | login | default

| enable | default

| exec | default

| commands | default

| accounting-exec | default

ssh | login | default

| enable | default

| exec | default

| commands | default

| accounting-exec | default

http | login | default

https | login | default

# tacacs Default-Config

## Syntax

```
tacacs default-config [key TACACSKEY] [timeout <1-30>]
```

## Parameter

Key	TACACSKEY Specify default tacacs+ server key string
Timeout	<1-30> Specify default tacacs+ server timeout value

## Default

Default tacacs+ key is "".

Default tacacs+ timeout is 5 seconds.

## Mode

Global Configuration

## Usage

Use the “tacacs default-config” command to modify the default values of the tacacs+ server. These default values will be used when a user tries to create a new tacacs+ server and doesn’t assign these values.

## Example

This example shows how modify default tacacs+ configuration

This example shows how to modify default tacacs+ configuration

```
Switch(config)#
```

```
    tacacs default-config timeout 20
```

```
Switch(config)#
```

```
    tacacs default-config key tackey
```

This example shows how to show default tacacs+ configurations.

```
Switch#
```

```
    show tacacs default-config
```

```
Timeout | Key
```

```
10 | tackey
```

This example shows how to create a new tacacs+ server with above default config and show results.

```
Switch(config)#
```

```
    tacacs host 192.168.1.111
```

```
Switch#
```

```
    show tacacs
```

```
Prio | Timeout | IP Address | Port |
```

```
Key
```

1|10|192.168.1.111|49|

tackey

# tacacs Host

## Syntax

```
tacacs host HOSTNAME [port <0-65535>] [key TACPLUSKEY] [priority <0-65535>] [timeout <1-30>]  
no tacacs [host HOSTNAME]
```

## Parameter

<b>Host</b>	HOSTNAME Specify tacacs+ server host name, both IP address and domain name are available.
<b>Port&lt;0-65535&gt;</b>	Specify tacacs+ server udp port
<b>Key</b>	TACPLUSKEY Specify tacacs+ server key string
<b>Priority&lt;0-65535&gt;</b>	Specify tacacs+ server priority
<b>Timeout &lt;1-30&gt;</b>	Specify tacacs+ server timeout value

## Default

Default tacacs+ key is "".

Default tacacs+ timeout is 5 seconds

## Mode

Global Configuration

## Usage

Use "tacacs host" command to add or edit tacacs+ server for authentication, authorization or accounting. Use no form to delete one or all tacacs+ servers from database.

## Example

This example shows how to create a new tacacs+ server

```
Switch(config)#
```

```
    tacacs host 192.168.1.111 port 12345
```

```
key tacacs+ priority 100 timeout 10
```

This example shows how to show existing tacacs+ server.

```
Switch#
```

```
    show tacacs
```

```
Prio | Timeout | IP Address | Port | Key
```

```
100 | 10 | 192.168.1.111 | 12345 |
```

```
tacacs+
```

# Show tacacs Default-Config

## Syntax

show tacacs default-config

## Parameter

None

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use "show tacacs default-config" command to show tacacs+ default configurations.

## Example

This example shows how to show default tacacs+ configurations.

Switch#

```
show tacacs default-config
```

Timeout | Key

10 | tackey

# Show tacacs

## Syntax

Show tacacs

## Parameter

None

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use "show tacacs" command to show existing tacacs+ servers.

## Example

This example shows how to show existing tacacs+ server.

Switch#

```
show tacacs
```

Prio | Timeout | IP Address | Port | Key

100 | 10 | 192.168.1.111 | 12345 | tacacs+

# Radius Default-Config

## Syntax

```
radius default-config [key RADIUSKEY] [retransmit <1-10>] [timeout <1-30>]
```

## Parameter

<b>Key</b>	RADIUSKEY Specify default radius server key string
<b>Retransmit</b>	<1-10> Specify default radius server retransmit value
<b>Timeout</b>	<1-30> Specify default radius server timeout value

## Default

Default radius key is "".

Default radius retransmit is 3 times.

Default radius timeout is 3 seconds.

## Mode

Global Configuration

## Usage

Use the “radius default-config” command to modify the default values of the radius server. These default values will be used when a user tries to create a new radius server and isn’t assigned these values.

## Example

This example shows how to modify default radius configuration

```
Switch(config)#  
radius default-config timeout 20
```

```
Switch(config)#  
radius default-config key radiuskey
```

```
Switch(config)#  
radius default-config retransmit 5
```

This example shows how to show default radius configurations.

```
Switch#  
show radius default-config  
Retries| Timeout| Key  
5 | 20 | radiuskey
```

This example shows how to create a new radius server with above default config and show results.

```
Switch(config)#  
radius host 192.168.1.111  
Switch#  
show radius
```

Prio | IP Address | Auth-Port| Retries|

Timeout| Usage-Type| Key

1 | 192.168.1.111 | 1812 | 5 |

20 | All | radiuskey

# Radius Host

## Syntax

```
radius host HOSTNAME [auth-port <0-65535>] [key RADIUSKEY] [priority <0-65535>] [retransmit <1-10>] [timeout <1-30>] [type (login|802.1x|all)]
```

```
no radius [host HOSTNAME]
```

## Parameter

<b>Host</b>	HOSTNAME Specify radius server host name, both IP address and domain name are available.
<b>Auth-port &lt;0- 65535&gt;</b>	Specify radius server udp port
<b>Key RADIUSKEY</b>	Specify radius server key string
<b>priority &lt;0-65535&gt;</b>	Specify radius server priority
<b>Retransmit &lt;1-10&gt;</b>	Specify radius server retransmit times
<b>Timeout &lt;1-30&gt;</b>	Specify radius server timeout value
<b>Type</b>	Usage type of this server
<b>Login</b>	Use for login
<b>802.1X</b>	Use for 802.1X authentication
<b>All</b>	Use for both login and 802.1X authentication

## Default

Default radius key is "".

Default radius timeout is 3 seconds.

## **Mode**

Global Configuration

## **Usage**

Use “radius host” command to add or edit an existing radius server. Use no form to delete one or all radius servers from database.

## **Example**

This example shows how to create a new radius server

```
Switch(config)#
```

```
    radius host 192.168.1.111 auth-port 12345 key radiuskey priority 100 retransmit 5 timeout 10 type all
```

This example shows how to show existing radius server.

```
Switch#
```

```
    show radius
```

```
Prio | IP Address | Auth-Port| Retries|
```

```
Timeout| Usage-Type| Key
```

```
100 | 192.168.1.111 | 12345 | 5 | 10
```

```
| All |radiuskey
```

# Show Radius Default-Config

## Syntax

```
show radius default-config
```

## Parameter

None

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use the “show radius default-config” command to show radius default configurations.

## Example

This example shows how to show default radius configurations.

Switch#

```
show radius default-config
```

Retries| Timeout| Key

```
5 | 20 | radiuskey
```

# Show Radius

## Syntax

Show radius

## Parameter

None

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use "show radius" command to show existing radius servers.

## Example

This example shows how to show existing radius server.

Switch#

```
show radius
```

Prio | IP Address | Auth-Port| Retries|

Timeout| Usage-Type| Key

100 | 192.168.1.111 | 12345 | 5 | 10

| All |radiuskey

# Chapter 3

## ACL

# MAC ACL

## Syntax

mac acl NAME

no mac acl NAME

## Parameter

NAME Specify the name of MAC ACL

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the mac acl command to create a MAC access list and to enter mac-acl configuration mode. The name of the ACL must be unique and cannot have same name as another ACL or QoS policy. Once an ACL is created, an implicit "deny any" ACE is created at the end of the ACL. That is, if there are no matches, the packets are denied. Use the no form of this command to delete it.

## Example

The example shows how to create a ip acl. You can verify settings by the following show acl commands:

```
Switch334455(config)#
```

```
    mac acl test
```

```
Switch334455(mac-al)#
```

```
    show acl
```

```
MAC access list test
```

# Permit (MAC)

## Syntax

```
[sequence <1-2147483647>] permit (A:B:C:D:E:F/A:B:C:D:E:F|any) (A:B:C:D:E:F/A:B:C:D:E:F|any) [vlan <1-4094>] [cos <0-7> <0-7>]
```

```
[ethertype <1501-65535>]
```

```
no sequence <1-2147483647>
```

## Parameter

<1-2147483647>	(Optional) Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
(A:B:C:D:E:F/A:B:C:D:E:F any)	Specify the source MAC address and mask of packet or any MAC address.
(A:B:C:D:E:F/A:B:C:D:E:F any)	Specify the destination MAC address and mask of packet or any MAC address
[vlan <1-4094>]	(Optional) Specify the vlan ID of packet.
[cos <0-7> <0-7>]	(Optional) Specify the Class of Service value and mask of packet.
[ethertype <1501-65535>]	(Optional) Specify Ethernet protocol number of packet

## Default

No default is defined.

## Mode

MAC ACL Configuration

## Usage

## Usage

Use the permit command to add permit conditions for a mac ACE that bypass those packets that hit the ACE. The “sequence” also represents the hit priority when an ACL binds to an interface. An ACE that doesn’t specify a “sequence” index would assign a sequence index which is the largest existed index plus 20. If the packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if it has the same conditions as existing ACE.

## Example

The example shows how to add an ACE that permit packets with the source MAC address 22:33:44:55:66:77, VLAN 3, and the Ethernet type 1999. You can verify settings by the following show acl command.

```
Switch334455(config)#
```

```
    mac acl test
```

```
Switch334455(mac-al)#
```

```
    sequence 999 permit
```

```
22:33:44:55:66:77/FF:FF:FF:FF:FF:FF any vlan 3 ethtype 1999
```

```
Switch334455(mac-al)#
```

```
    show acl
```

```
MAC access list test
```

```
sequence 999 permit 22:33:44:55:66:77/FF:FF:FF:FF:FF:FF any vlan 3 ethtype 1999
```

# Deny (MAC)

## Syntax

```
[sequence <1-2147483647>] deny (A:B:C:D:E:F/A:B:C:D:E:F|any) (A:B:C:D:E:F/A:B:C:D:E:F|any) [vlan <1-4094>] [cos <0-7> <0-7>]
```

```
[ethertype <1501-65535>] [shutdown]
```

```
no sequence <1-2147483647>
```

## Parameter

<1-2147483647>	(Optional) Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
(A:B:C:D:E:F/A:B:C:D:E:F any)	Specify the source MAC address and mask of packet or any MAC address.
(A:B:C:D:E:F/A:B:C:D:E:F any)	Specify the destination MAC address and mask of packet or any MAC address.
[vlan <1-4094>] (Optional)	Specify the vlan ID of packet.
[cos <0-7> <0-7>]	(Optional) Specify the Class of Service value and mask of packet.
[ethertype <1501-65535>]	(Optional) Specify Ethernet protocol number of packet.
[shutdown]	(Optional) Shutdown interface while ACE hit.

## Default

No default is defined

## Mode

MAC ACL Configuration

## Usage

Use the deny command to add deny conditions for a mac ACE that drop those packets hit the ACE. The “sequence” also represents hit priority when ACL bind to an interface. An ACE that does not specify a “sequence” index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as an existing ACE. Use “shutdown” to shutdown the interface while ACE is hit.

### Example

The example shows how to add an ACE that denies packets with destination MAC address aa:bb:cc:xx:xx:xx and VLAN 9. You can verify settings by the following show acl command.

```
Switch334455(config)#
```

```
    mac acl test
```

```
Switch334455(mac-al)#
```

```
    sequence 30 permit any any
```

```
Switch334455(mac-al)# deny any aa:bb:cc:00:0:00/FF:FF:FF:00:00:00 vlan 9 shutdown
```

```
Switch334455(mac-al)#
```

```
    show acl
```

```
MAC access list test
```

```
sequence 30 permit any any
```

```
sequence 50 deny any AA:BB:CC:00:00:00/FF:FF:FF:00:00:00 vlan 9 shutdown
```

# IP ACL

## Syntax

IP acl NAME

no IP acl NAME

## Parameter

NAME Specify the name of IPv4 ACL

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the ip acl command to create an IPv4 access list and to enter the ip-acl configuration mode. The name of the ACL must be unique and cannot have same name with as another ACL or QoS policy. Once an ACL is created, an implicit "deny any" ACE created at the end of the ACL. That is, if there are no matches, the packets are denied. Use the no form of this command to delete it.

## **Example**

The example shows how to create an IP ACL. You can verify settings by the following show acl command.

```
Switch334455(config)#
```

```
    ip acl iptest
```

```
Switch334455(ip-al)#
```

```
    show acl
```

```
IP access list iptest
```

# Permit (IP)

## Syntax

[sequence <1-2147483647>] permit (<0-255>|ipinip|egp|igp|hmp|rdp|ipv6| ipv6:rout|ipv6: frag|rsvp|ipv6: icmp|ospf|pim||l2tp|ip) (A.B.C.D/A.B.C.D|any) [(dscp|precedence) VALUE]

[sequence <1-2147483647>] permit icmp (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) (<0-255>|echo-reply|destination-unreachable|sourcequench| echo-request|

no sequence <1-2147483647>

## Parameter

<b>&lt;1-2147483647&gt;</b>	(Optional) Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
<b>(A.B.C.D/A.B.C.D any)</b>	Specify the source IPv4 address and mask of packet or any IPv4 address.
<b>(A.B.C.D/A.B.C.D any)</b>	Specify the destination IPv4 address and mask of packet or any IPv4 address.
<b>[dscp VALUE]</b>	(Optional) Specify the DSCP of packet.
<b>[precedence VALUE]</b>	(Optional) Specify the IP precedence of packet.
<b>icmp-type</b>	Specify ICMP message type for filtering ICMP packet. Enter a type name of list or a number of ICMP message type.
<b>icmp-code</b>	Specify ICMP message code for filtering ICMP packet.
<b>igmp-type</b>	Specify IGMP type for filtering IGMP packet. Enter a type name of list or a number of IGMP type.
<b>l4-source-port</b>	Specify TCP/UDP source port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
<b>l4-destination-port</b>	Specify TCP/UDP destination port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
<b>match-all</b>	Specify tcp flag for TCP packet. If a flag should be set it is prefixed by "+\".If a flag should be unset it is prefixed by "-\". Available options are +urg, +ack, +psh, +rst, +syn, +fin, -urg, -ack, -psh, -rst, -syn and -fin.To define more than 1 flag-enter additional flags one after another without a space (example +syn-ack).

## **Default**

No default is defined.

## **Mode**

IP ACL Configuration

## **Usage**

Use the permit command to add permit conditions for an IP ACE that bypass those packets hit the ACE. The “sequence” also represents hit priority when ACL bind to an interface. An ACE not specifies “sequence” index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as existed ACE.

## **Example**

The example shows how to add a set of ACEs. You can verify settings by the following show acl command. This command shows how to permit a source IP address subnet.

This command shows how to permit a source IP address subnet.

```
Switch334455(ip-al)#
permit ip 192.168.1.0/255.255.255.0
```

This command shows how to permit ICMP echo-request packet with any IP address.

```
Switch334455(ip-al)#
permit icmp any any echo-request any
```

This command shows how to permit any IP address HTTP packets with DSCP 5.

```
Switch334455(ip-al)#

```

```
    permit tcp any any any www dscp 5

```

This command shows how to permit any source IP address SNMP packet connect to destination IP address 192.168.1.1.

```
Switch334455(ip-al)#

```

```
    permit udp any any 192.168.1.1/255.255.255.255 snmp

```

```
Switch334455(ip-al)#

```

```
    show acl

```

```
IP access list iptest

```

```
sequence 1 permit ip 192.168.1.0/255.255.255.0 any

```

```
sequence 21 permit icmp any any echo-request any

```

```
sequence 41 permit tcp any any any www dscp 5

```

```
sequence 61 permit udp any any 192.168.1.1/255.255.255.255 snmp

```

# Deny (IP)

## Syntax

```
[sequence <1-2147483647>] deny (<0-255>|ipinip|egp|igp|hmp|rdp|ipv6 ipv6:rout|ipv6:frag1

no sequence <1-2147483647>
```

## Parameter

<1-2147483647>	(Optional) Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
(A.B.C.D/A.B.C.D any)	Specify the source IPv4 address and mask of packet or any IPv4 address.
(A.B.C.D/A.B.C.D any)	Specify the destination IPv4 address and mask of packet or any IPv4 address.
[dscp VALUE]	(Optional) Specify the DSCP of packet.
[precedence VALUE]	(Optional) Specify the IP precedence of packet.
icmp-type	Specify ICMP message type for filtering ICMP packet. Enter a type name of list or a number of ICMP message type.
icmp-code	Specify ICMP message code for filtering ICMP packet.
igmp-type	Specify IGMP type for filtering IGMP packet. Enter a type name of list or a number of IGMP type.
l4-source-port	Specify TCP/UDP source port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
l4-destination-port	Specify TCP/UDP destination port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port
match-all	Specify tcp flag for TCP packet. If a flag should be set it is prefixed by "+"-. If a flag should be unset it is prefixed by "-". Available options are +urg, +ack, +psh, +rst, +syn, +fin, -urg, -ack, - psh, -rst, -syn and -fin. To define more than 1 flag - enter additional flags one after another without a space (example +syn-ack).
[shutdown]	(Optional) Shutdown interface while ACE hit

## Default

No default is defined.

## **Mode**

IP ACL Configuration

## **Usage**

Use the deny command to add deny conditions for an IP ACE that drop those packets hit the ACE. The “sequence” also represents hit priority when ACL bind to an interface. An ACE not specifies “sequence” index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if has the same conditions as existed ACE. Use “shutdown” to shutdown interface while ACE hit.

## **Example**

The example shows how to add an ACE that denies packets with the source IP address 192.168.1.80. You can verify settings by the following show acl command.

```
Switch334455(config)#
```

```
    ip acl iptest
```

```
Switch334455(ip-al)#
```

```
    deny ip 192.168.1.80/255.255.255.255 any
```

```
Switch334455(ip-al)#
```

```
    show acl
```

```
IP access list iptest
```

```
sequence 1 deny ip 192.168.1.80/255.255.255.255 any
```

# IPv6 ACL

## Syntax

ipv6 acl NAME

no ipv6 acl NAME

## Parameter

NAME Specify the name of IPv6 ACL

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the `ipv6 acl` command to create an IPv6 access list and to enter `ipv6-acl` configuration mode. The name of ACL must be unique that can not have same name with other ACL or QoS policy. Once an ACL is created, an implicit “deny any” ACE is created at the end of the ACL. That is, if there are no matches, the packets are denied. Use the `no` form of this command to delete.

## Example

The example shows how to create an IPv6 ACL. You can verify settings by the following `show acl` command

Switch334455(config)#

  ipv6 acl ipv6test

Switch334455(ipv6-al)#

  show acl

IPv6 access list iptest

# Permit (IPv6)

## Syntax

```
[sequence <1-2147483647>] permit (<0-255>|ipv6) (X:X::X:X/<0- 128>|any) (X:X::X:X/<0-128>|any)
[(dscp|precedence) VALUE]

[sequence <1-2147483647>] permit icmp (X:X::X:X/<0-128>|any) (X:X::X:X/<0-128>|any) (<0-255>|destination-
unreachable|packet-too-big|

[(dscp|precedence) VALUE]

[sequence <1-2147483647>] permit udp (X:X::X:X/<0-128>|any) (<0-65535>|echo|discard|time|nameserver|ta
cacs-ds|domain| bootps|bootpc|tftp|sunrpc|ntp|netbios-ns|snmp|snmptrap|who|syslog| talk|rip|PORT_RANGE|any)
(X:X::X:X/<0-128>|any) (<0- 65535>|echo|discard|time|nameserver|tacacs-ds|domain| bootps|bootpc|tftp|sunrpc|ntp|ne
tbios-ns| snmp|snmptrap|who|syslog|PORT RANGE|any) [(dscp|precedence) VALUE]

no sequence <1-2147483647>
```

## Parameter

<1-2147483647> (Optional)	Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
(A.B.C.D/A.B.C.D any)	Specify the source IPv4 address and mask of packet or any IPv4 address.
(A.B.C.D/A.B.C.D any)	Specify the destination IPv4 address and mask of packet or any IPv4 address.
[dscp VALUE] (Optional)	Specify the DSCP of packet.
[precedence VALUE] (Optional)	Specify the IP precedence of packet.
icmp-type	Specify ICMP message type for filtering ICMP packet. Enter a type name of list or a number of ICMP message type.
icmp-code	Specify ICMP message code for filtering ICMP packet.
igmp-type	Specify IGMP type for filtering IGMP packet. Enter a type name of list or a number of IGMP type.
l4-source-port	Specify TCP/UDP source port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port
l4-destination-port	Specify TCP/UDP destination port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
match-all	Specify tcp flag for TCP packet. If a flag should be set it is prefixed by "+"-. If a flag should be unset it is prefixed by "-". Available options are +urg, +ack, +psh, +rst, +syn, +fin, -urg, -ack, - psh, -rst, -syn and -fin. To define more than 1 flag - enter additional flags one after another without a space (example +syn-ack).

## Default

No default is defined.

## **Mode**

IP ACL Configuration

## **Usage**

Use the permit command to add permit conditions for an IP ACE that bypass those packets that hit the ACE. The “sequence” also represents hit priority when ACLs bind to an interface. An ACE not specifying a “sequence” index would assign a sequence index which is the largest existing index plus 20. If the packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can't be added if has the same conditions as an existing ACE.

## **Example**

The example shows how to add a set of ACEs. You can verify settings by the following show acl command.

This command shows how to permit a source IP address subnet.

```
Switch334455(ipv6-al)#
    permit permit ipv6 fe80:1122:3344:5566::1/64 any
```

```
Switch334455(ipv6-al)#
    show acl
IPv6 access list ipv6test
sequence 1 permit ipv6 fe80:1122:3344:5566::1/64 any
```

# Deny IP

## Syntax

```
[sequence <1-2147483647>] deny (<0-255>|ipinip|egp|igp|hmp|rdp|ipv6|
ipv6:rout|ipv6:frag|rsvp|ipv6:icmp|ospf|pim||2tp|ip) (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) [(dscp|precedence)
VALUE]] [shutdown]

[sequence <1-2147483647>] deny icmp (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) (<0-255>|echo-reply|destination-
unreachable| source-quench|echo-request|router-advertisement|router-solicitation| time-exceeded|timestamp|
timestamp-reply|traceroute|any) (<0-255>|any) [(dscp|precedence) VALUE] [shutdown]

[sequence <1-2147483647>] deny igmp (A.B.C.D/A.B.C.D|any) (A.B.C.D/A.B.C.D|any) (<0-255>|host-query|host-
report|dvmrp|pim| cisco-trace|host-report-v2|host-leave-v2|host-report-v3|any) [(dscp|precedence) VALUE] [shutdown]

[sequence <1-2147483647>] deny tcp (A.B.C.D/A.B.C.D|any) (<0-65535>|echo| discard|daytime|ftp-data|ftp|telnet|s
mtp|time|hostname|whois|tacacs-ds|domain|www|pop2|pop3| syslog|talk|klogin|kshell|sunrpc|drip|PORT_RANGE|any)
(A.B.C.D/A.B.C.D|any) (<0-65535>|echo|discard|daytime|ftp-data|ftp|telnet| smtp|time|hostname|whois|tacacs-ds|dom
ain|www|pop2|pop3|syslog|talk| klogin|kshell|sunrpc|drip|PORT_RANGE|any) [match-all TCP_FLAG] [(dscp|precedence)
VALUE] [shutdown]

netbios-ns|snmp|snmptrap|who|syslog|PORT_RANGE|any)[(dscp|precedence) VALUE] [shutdown]no sequence <1-
2147483647>
```

## Parameter

<b>&lt;1-2147483647&gt; (Optional)</b>	Specify sequence index of ACE, the sequence index represent the priority of an ACE in ACL.
<b>(A.B.C.D/ A.B.C.D any)</b>	Specify the source IPv4 address and mask of packet or any IPv4 address.
<b>(A.B.C.D/ A.B.C.D any)</b>	Specify the destination IPv4 address and mask of packet or any IPv4 address.
<b>[dscp VALUE] (Optional)</b>	Specify the DSCP of packet.
<b>[precedence VLAUE] (Optional)</b>	Specify the IP precedence of packet.
<b>icmp-type</b>	Specify ICMP message type for filtering ICMP packet. Enter a type name of list or a number of ICMP message type.
<b>icmp-code</b>	Specify ICMP message code for filtering ICMP packet.
<b>igmp-type</b>	Specify IGMP type for filtering IGMP packet. Enter a type name of list or a number of IGMP type.
<b>I4-source-port</b>	Specify TCP/UDP source port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
<b>I4-destination-port</b>	Specify TCP/UDP destination port of for filtering TCP/UDP packet. Enter a port name of list or a number of TCP/UDP port.
<b>match-all</b>	Specify tcp flag for TCP packet. If a flag should be set it is prefixed by "+"\. If a flag should be unset it is prefixed by "-\". Available options are +urg, +ack, +psh, +rst, +syn, +fin, -urg, -ack, - psh, -rst, -syn and -fin. To define more than 1 flag - enter additional flags one after another without a space (example +syn-ack).
<b>[shutdown] (Optional)</b>	Shutdown interface while ACE hit

## **Default**

No default is defined.

## **Mode**

IP ACL Configuration

## **Usage**

Use the deny command to add deny conditions for an IPv6 ACE that then drops those packets that hit the ACE. The “sequence” also represents hit priority when the ACL binds to an interface. An ACE that doesn’t specify the “sequence” index would assign a sequence index which is the largest existed index plus 20. If packet content can match more than one ACE, the lowest sequence ACE is hit. An ACE can not be added if it has the same conditions as existing ACEs. Use “shutdown” to shutdown the interface while ACE hits

## **Example**

The example shows how to add an ACE that denies packets with destination IP address fe80::abcd. You can verify settings by the following show acl command

```
Switch334455(config)#
```

```
    ipv6 acl ipv6test
```

```
Switch334455(ip-al)#
```

```
    deny ipv6 any fe80::abcd/128
```

```
Switch334455(ip-al)#
```

```
    show acl.
```

```
IPv6 access list ipv6test
```

sequence 1 deny ipv6 any fe80::abcd/128

# Bind ACL

## Syntax

(mac|ip|ipv6) acl NAME

[no] (mac|ip|ipv6) acl NAME

## Parameter

<b>(mac ip ipv6)</b>	Specify a type of ACL to binding to interface
<b>NAME</b>	Specify the name of the ACL

## Default

No default is defined

## Mode

Interface Configuration

## Usage

Use the (mac|ip|ipv6) acl NAME command to bind an ACL to interfaces. An interface can bind only one ACL or QoS policy.  
Use the no form of this command to return to unbind an ACL from interface

## Example

The example shows how to bind an existed ACL to interface.

```
switch(config)#
```

```
    interface fa1
```

```
switch(config-if)#  
  mac acl test  
switch(config-if)#  
  do show running-config interfaces fa1  
interface fa1  
  mac acl test
```

# Show ACL

## Syntax

show acl

show (mac|ip|ipv6) acl

show (mac|ip|ipv6) acl NAME

## Parameter

(mac ip ipv6)	Specify a type of ACL to show
NAME	Specify the name of the ACL

## Default

No default is defined

## Mode

Global Configuration

Context Configuration

## Usage

Use the show acl command to show created ACLs. You can specify mac ip or ipv6 to show specific type ACL or specify unique name string to show ACL with the name.

## Example

The example shows how to show all IP ACL.

Switch334455(config)#

show ip acl

IP access list iptest

sequence 1 deny ip 192.168.1.80/255.255.255.255 any

# Show ACL Utilization

## Syntax

show acl utilization

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show acl utilization command to show the usage of PIE of ASIC. When a ACL bind to interface, it needs ASIC PIE resource to help to filter packet. An ASIC has limited PIE resource. This command help user to know the PIE usage of AISC.

## Example

The example shows how to show PIE utilization.

Switch334455(config)#

    show acl utilization

Group Index : 1

Group Assign to : Mac-based ACL and IPv4-based ACL

Group Maximum ACEs : 128

Group Remain ACEs : 125

Group Used ACEs : 3

ACEs Used by ACL : 3

ACEs Used by QoS : 0

Group Index : 2

Group Assign to : None

Group Maximum ACEs : 128

Group Remain ACEs : 128

# Chapter 4

# Administration

# Enable

## Syntax

enable [<1-15>]

disable [<1-14>]

## Parameter

<1-15>	Specify privileged level to enable
<1-14>	Specify privileged level to disable

## Default

Default privilege level is 15 if no privilege level is specified on enable command.

Default privilege level is 1 if no privilege level is specified on disable command.

## Mode

User EXEC

## Usage

In User EXEC mode, user only allows to do a few actions. Most of commands are only available in privileged EXEC mode. Use “enable” command to enter the privileged mode to do more actions on switch. In privileged EXEC mode, use “exit” command is able to go back to user EXEC mode with original user privilege level. If you need to go back to user EXEC mode with different privilege level, use “disable” command to specify the privilege level you need. In privileged EXEC mode, the prompt will show “Switch#”

## Example

This example shows how to enter privileged EXEC mode and show current privilege level.

Switch>

  enable

Switch#

  show privilege

Current CLI Username:

Current CLI Privilege: 15

This example show how to enter user EXEC mode with privilege 3.

Switch#

  disable 3

Switch>

  show privilege

Current CLI Username:

Current CLI Privilege: 3

# **Exit**

## **Syntax**

exit

## **Parameter**

None

## **Default**

No default value for this command.

## **Mode**

User EXEC

Privileged EXEC

Global Configuration

Interface Configuration

Line Configuration

## **Usage**

In User EXEC mode, “exit” command will close current CLI session. In other modes, “exit” command will go to the parent mode. And every mode has the “exit” command.

## **Example**

This example shows how to enter privileged EXEC mode and use exit command to go back to user EXEC mode.

Switch>

  enable

Switch#

  exit

Switch>

# Configure

## Syntax

configure

## Parameter

None

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use “configure” command to enter global configuration mode. In global configuration mode, the prompt will show as “Switch(config)#”.

## Example

This example shows how to enter global configuration mode.

Switch#

  configure

Switch(config)#

# Interface

## Syntax

interface IF\_PORTS

interface range IF\_PORTS

## Parameter

IF\_PORTS Specify the port to select. This parameter allows partial port name and ignore case. For Example:

fa1

FastEthernet3

Gigabit4

If port range is specified, the list format is also available. For Example:

fa1,3,5

fa2,gi1-3

## Default

No default value for this command

## Mode

Global Configuration

## **Usage**

Some configurations are port based. In order to configure these configurations, we need to enter Interface Configuration mode to configure them. Use “interface” command to enter the Interface Configuration mode and select the port to be configured. In Interface Configuration mode, the prompt will show as “Switch(configif)#”

## **Example**

This example shows how to enter Interface Configuration mode.

```
Switch#
```

```
  configure
```

```
Switch(config)#
```

```
  interface fa1
```

```
Switch(config-if)#
```

# Line

## Syntax

```
line ( console | telnet | ssh )
```

## Parameter

console	Select console line to configure.
telnet	Select telnet line to configure.
ssh	Select ssh line to configure.

## Default

No default value for this command.

## Mode

Global Configuration

## Usage

Some configurations are line based. In order to configure these configurations, we need to enter Line Configuration mode to configure them. Use “line” command to enter the Line Configuration mode and select the line to be configured. In Line Configuration mode, the prompt will show as “Switch(config-line)♯”

## **Example**

This example shows how to enter Interface Configuration mode.

Switch#

  configure

Switch(config)#

  line console

Switch(config-line)#

# **End**

## **Syntax**

end

## **Parameter**

None

## **Default**

No default value for this command.

## **Mode**

Privileged EXEC

Global Configuration

Interface Configuration

Line Configuration

## **Usage**

Use “end” command to return to privileged EXEC mode directly. Every mode except User EXEC mode has the “end” command.

## Example

This example shows how to enter Interface Configuration mode and use end command to go back to privileged EXEC mode

Switch#

```
configure
```

Switch(config)#

```
    interface fa1
```

Switch(config-if)#

```
    end
```

Switch#

# **Reboot**

## **Syntax**

reboot

## **Parameter**

None

## **Default**

No default value for this command.

## **Mode**

Privileged EXEC

## **Usage**

Use the “reboot” command to make the system do a hot restart.

## **Example**

This example shows how to restart the system

Switch#

reboot

# **System Name**

## **Syntax**

system name NAME

## **Parameter**

NAME Specify system name string.

## **Default**

Default name string is "Switch".

## **Mode**

Global Configuration

## **Usage**

Use "system name" command to modify system name information of the switch. The system name is also used to be CLI prompt.

## **Example**

This example shows how to modify contact information

Switch(config)#

```
    system name myname
```

myname(config)#

This example shows how to show system name information

Switch#

  show info

System Name : myname

System Location : Default Location

System Contact : Default Contact

MAC Address : DE:AD:BE:EF:01:02

IP Address : 192.168.1.1

Subnet Mask : 255.255.255.0

Loader Version : 1.3.0.26225

Loader Date : Thu May 17 15:19:42 CST 2012

Firmware Version : 2.5.0-beta.32811

Firmware Date : Mon Sep 24 19:33:42 CST 2012

System Object ID : 1.3.6.1.4.1.27282.3.2.10

System Up Time : 0 days, 0 hours, 2 mins, 37 secs

# System Contact

## Syntax

system contact CONTACT

## Parameter

CONTACT Specify contact string.

## Default

Default contact string is “Default Contact”.

## Mode

Global Configuration

## Usage

Use “system contact” command to modify contact information of the switch.

## Example

This example shows how to modify contact information

Switch(config)#

```
system contact callme
```

This example shows how to show system contact information

Switch#

show info

System Name : Switch

System Location : Default Location

System Contact : callme

MAC Address : DE:AD:BE:EF:01:02

IP Address : 192.168.1.1

Subnet Mask : 255.255.255.0

Loader Version : 1.3.0.26225

Loader Date : Thu May 17 15:19:42 CST 2012

Firmware Version : 2.5.0-beta.32811

Firmware Date : Mon Sep 24 19:33:42 CST 2012

System Object ID : 1.3.6.1.4.1.27282.3.2.10

System Up Time : 0 days, 0 hours, 2 mins, 37 secs

# **System Location**

## **Syntax**

CONTACT Specify location string.

## **Parameter**

None

## **Default**

Default location string is "Default Location".

## **Mode**

Global Configuration

## **Usage**

Use the "system location" command to modify location information of the switch.

## **Example**

This example shows how to modify contact information

```
Switch(config)#
```

```
    system location home
```

This example shows how to show system location information

Switch#

show info

System Name :

System Location : home

System Contact : Default Contact

MAC Address : DE:AD:BE:EF:01:02

IP Address : 192.168.1.1

Subnet Mask : 255.255.255.0

Loader Version : 1.3.0.26225

Loader Date : Thu May 17 15:19:42 CST 2012

Firmware Version : 2.5.0-beta.32811

Firmware Date : Mon Sep 24 19:33:42 CST 2012

System Object ID : 1.3.6.1.4.1.27282.3.2.10

System Up Time : 0 days, 0 hours, 2 mins, 37 secs

# Username

## Syntax

```
username WORD<0-32> [privilege (admin | user | <0-15>)] (password | secret) WORD<0-32>
no username WORD<0-32>
```

## Parameter

<b>username WORD&lt;0-32&gt;</b>	Specify user name to add/delete/edit.
<b>privilege admin</b>	Specify privilege level to be admin (privilege 15)
<b>privilege user</b>	Specify privilege level to be user (privilege 1) privilege <0-15> Specify custom privilege level
<b>password WORD&lt;0-32&gt;</b>	Specify password string and make it not encrypted. secret WORD<0-32>

## Default

Default username "" has password "" with privilege 1. Default username "admin" has password "admin" with privilege 15.

## Mode

Global Configuration

## Usage

Use "username" command to add a new user account or edit an existing user account. And use "no username" to delete an existing user account. The user account is a local database for login authentication.

## Example

## Example

This example shows how to add a new user account.

```
Switch(config)#
```

```
    username test secret passwd
```

This example shows how to show existing user accounts.

```
Switch#
```

```
    show username
```

```
Priv | Type | User Name |
```

```
Password
```

```
01 | secret ||
```

```
dnXenc|RwfIV6
```

```
15 | secret | admin |
```

```
FzjrG06vfbERY
```

```
15 | secret | test |
```

```
7p57T9yMkViSUS
```

# Enable Password

## Syntax

```
enable [privilege <0-15>] (password | secret) WORD<032>  
no enable [privilege <0-15>]
```

## Parameter

privilege <0-15>	Specify the privilege level to configure. If no privilege level is specified, default is 15.
password WORD<0-32>	Specify password string and make it not encrypted.
secret WORD<0-32>	Specify password string and make it encrypted.

## Default

Default enable password for all privilege levels are "".

## Mode

Global Configuration

## Usage

Use the "enable password" command to edit passwords for each privilege level for enabling authentication. Use the "no enable" command to restore password enabling to a default empty value. The only way to show this configuration is using "show running-config".

## Example

This example shows how to edit enable password for privilege level 15

## **Example**

This example shows how to edit enable password for privilege level 15

```
Switch(config)#
```

```
enable secret enblpasswd
```

# IP Address

## Syntax

```
ip address A.B.C.D [mask A.B.C.D]
```

## Parameter

<b>address A.B.C.D</b>	Specify IPv4 address for switch
<b>mask A.B.C.D</b>	Specify net mask address for switch

## Default

Default IP address is 192.168.1.1 and default net mask is 255.255.255.0.

## Mode

Global Configuration

## Usage

Use the “ip address” command to modify administration ipv4 addresses. This address is very important. When you try to use telnet, ssh, http, https, snmp, etc. to connect to the switch, you need to use this ip address to access it.

## Example

This example shows how to modify the ipv4 address of the switch.

```
Switch(config)# ip address 192.168.1.200 mask 255.255.255.0
```

This example shows how to show current ipv4 address of the switch.

Switch#

show ip

IP Address: 192.168.1.200

Subnet Netmask: 255.255.255.0

Default Gateway: 192.168.1.254

# IP Default Gateway

## Syntax

```
ip default-gateway A.B.C.D  
no ip default-gateway
```

## Parameter

A.B.C.D Specify default gateway IPv4 address for switch.

## Default

Default IP address of default gateway is 192.168.1.254.

## Mode

Global Configuration

## Usage

Use “ip default-gateway” command to modify default gateway address. And use “no ip default-gateway” to restore default gateway address to factory default.

## Example

This example shows how to modify the ipv4 address of the switch.

Switch#

```
show ip
```

IP Address: 192.168.1.1

Subnet Netmask: 255.255.255.0

Default Gateway: 192.168.1.100

# IP DNS

## Syntax

ip dns A.B.C.D [A.B.C.D]

no ip dns [A.B.C.D]

## Parameter

A.B.C.D Specify the DNS server ip address.

## Default

Default IP address of DNS server is 168.95.1.1 and 168.95.192.1

## Mode

Global Configuration

## Usage

Use “ip dns” command to modify DNS server address. And use “no ip dns” to delete existing DNS server.

## Example

This example shows how to modify the DNS server of the switch.

Switch(config)#

```
ip dns 111.111.111.111 222.222.222.222
```

This example shows how to show current DNS server of the switch.

Switch#

show ip dns

DNS Server 1 : 111.111.111.111

DNS Server 2 : 222.222.222.222

# IP DHCP

## Syntax

ip dhcp

no ip dhcp

## Parameter

None

## Default

.Default DHCP client is disabled.

## Mode

Global Configuration

## Usage

Use “ip dhcp” command to enable dhcp client to get IP address from remote DHCP server. Use “no ip dhcp” command to disable dhcp client and use static ip address.

## Example

This example shows how to enable dhcp client.

Switch(config)#

  ip dhcp

This example shows how to show current dhcp client state of the switch.

Switch#

show ip dhcp

DHCP Status : enabled

# IPv6 Autoconfig

## Syntax

ipv6 autoconfig

no ipv6 autoconfig

## Parameter

None

## Default

Default IPv6 auto config is enabled.

## Mode

Global Configuration

## Usage

Use the “`ipv6 autoconfig`” command to enable the IPv6 auto configuration feature. Use “`no ipv6 autoconfig`” command to disable the IPv6 auto configuration feature.

## Example

This example shows how to disable IPv6 auto config.

```
Switch(config)# no ipv6 autoconfig
```

This example shows how to show current IPv6 auto config state.

Switch#

show ipv6

IPv6 DHCP Configuration : Disabled

IPv6 DHCP DUID :

IPv6 Auto Configuration : Disabled

IPv6 Link Local Address :

fe80::dcad:beff:feef:102/64

IPv6 static Address :

fe80::20e:2eff:fef1:4b3c/128

IPv6 static Gateway Address : ::

IPv6 in use Address :

fe80::dcad:beff:feef:102/64

IPv6 in use Gateway Address : ::

# IPv6 Address

## Syntax

```
ipv6 address X:X::X:X prefix <0-128>
```

## Parameter

<b>address X:X::X:X</b>	Specify IPv6 address for switch
<b>prefix &lt;0-128&gt;</b>	Specify IPv6 prefix length for switch

## Default

No default ipv6 address on the switch.

## Mode

Global Configuration

## Usage

Use “ipv6 address” command to specify static IPv6 address.

## Example

This example shows how to add static ipv6 address of the switch.

```
Switch(config)#
```

```
    ipv6 address
```

```
fe80::20e:2eff:fef1:4b3c prefix 128
```

This example shows how to show current ipv6 address of the switch.

Switch#

show ipv6

IPv6 DHCP Configuration : Disabled

IPv6 DHCP DUID :

IPv6 Auto Configuration : Enabled

IPv6 Link Local Address :

fe80::dcad:beff:feef:102/64

IPv6 static Address :

fe80::20e:2eff:fef1:4b3c/128

IPv6 static Gateway Address : ::

IPv6 in use Address :

fe80::dcad:beff:feef:102/64

IPv6 in use Gateway Address : ::

# IPv6 Default Gateway

## Syntax

```
ipv6 default-gateway X:X::X:X
```

## Parameter

X:X::X:X Specify default gateway IPv6 address for switch

## Default

No default ipv6 default gateway address on the switch.

## Mode

Global Configuration

## Usage

Use “`ipv6 default-gateway`” command to modify default gateway IPv6 address.

## Example

This example shows how to modify the ipv6 default gateway address of the switch.

```
Switch(config)#
```

```
    ipv6 default-gateway fe80::dcad:beff:feef:103
```

```
Switch#
```

```
show ipv6
```

IPv6 DHCP Configuration : Disabled

IPv6 DHCP DUID :

IPv6 Auto Configuration : Enabled

IPv6 Link Local Address :

fe80::dcad:beff:feef:102/64

IPv6 static Address :

fe80::20e:2eff:fef1:4b3c/128

IPv6 static Gateway Address :::

IPv6 in use Address :

fe80::dcad:beff:feef:102/64

IPv6 in use Gateway Address ::

# IPv6 DHCP

## Syntax

ipv6 dhcp

no ipv6 dhcp

## Parameter

None

## Default

Default DHCPv6 client is disabled.

## Mode

Global Configuration

## Usage

Use “ipv6 dhcp” command to enable dhcpcv6 client to get IP address from remote DHCPv6 server. Use “no ipv6 dhcp” command to disable dhcpcv6 client and use static ipv6 address or ipv6 auto config address.

## Example

This example shows how to enable dhcp client.

Switch(config)#

  ipv6 dhcp

This example shows how to show current dhcpcv6 client state of the switch.

Switch#

show ipv6 dhcp

DHCPv6 Status : enabled

# IP Service

## Syntax

ip (telnet | ssh | http | https)

no ip (telnet | ssh | http | https)

## Parameter

<b>telnet</b>	Enable/Disable telnet service
<b>ssh</b>	Enable/Disable ssh service
<b>http</b>	Enable/Disable http service
<b>https</b>	Enable/Disable https service

## Default

Default telnet service is disabled.

Default ssh service is disabled.

Default http service is enabled.

Default https service is disabled.

## Mode

Global Configuration

## **Usage**

Use “ip service” command to enable all kinds of ip services. Such as telnet, ssh, http and https. Use no form to disable service.

## **Example**

This example shows how to enable telnet service and show current telnet service status.

```
Switch(config)#
```

```
    ip telnet
```

```
Telnetd daemon enabled.
```

```
Switch(config)#
```

```
    exit
```

```
Switch#
```

```
    show line telnet
```

## **Telnet**

```
Telnet Server : enabled
```

```
Session Timeout : 10 (minutes)
```

```
History Count : 128
```

```
Password Retry : 3
```

```
Silent Time : 0 (seconds)
```

This example shows how to enable https service and show current https

service status.

Switch(config)#

  ip https

Switch(config)#

  exit

Switch# show ip https

HTTPS daemon : enabled

Session Timeout : 10 (minutes)

# IP Session Timeout

## Syntax

```
ip (http | https) session-timeout <0-86400>
```

## Parameter

<b>http</b>	Specify session timeout for http service.
<b>https</b>	Specify session timeout for https service.
<b>&lt;0-86400&gt;</b>	Specify session timeout minutes. 0 means never timeout.

## Default

Default session timeout for http and https is 10 minutes.

## Mode

Global Configuration

## Usage

Use "ip session-timeout" command to specify the session timeout value for http or https service. When user login into WEBUI and do not do any action after session timeout will be logged out.

## Example

This example shows how to change http session timeout to 15min and https session timeout to 20min

```
Switch(config)#
```

```
ip http session-timeout 15
```

```
Switch(config)#
```

```
  ip https session-timeout 20
```

This example shows how to enable https service and show current https service status.

```
Switch#
```

```
  show ip http
```

HTTPS daemon : enabled

Session Timeout : 15 (minutes)

```
Switch#
```

```
  show ip https
```

HTTPS daemon : disabled

Session Timeout : 20 (minutes)

# Exec-Timeout

## Syntax

```
exec-timeout <0-65535>
```

## Parameter

<0-65535> Specify session timeout minutes. 0 means never timeout

## Default

Default session timeout for all lines are 10 minutes.

## Mode

Line Configuration

## Usage

Use “exec-timeout” command to specify the session timeout value for CLI running on console, telnet or ssh service. When user login into CLI and do not do any action after session timeout will be logged out from the CLI session.

## Example

This example shows how to change console session timeout to 15min ,telnet session timeout to 20 min and ssh session timeout to 25 min.

```
Switch(config)#
```

```
line console
```

```
Switch(config-line)#
```

```
  exec-timeout 15
```

```
Switch(config-line)#
```

```
  exit
```

```
Switch(config)#
```

```
  line telnet
```

```
Switch(config-line)#
```

```
  exec-timeout 20
```

```
Switch(config-line)#
```

```
  exit
```

```
Switch(config)#
```

```
  line ssh
```

```
Switch(config-line)#
```

```
  exec-timeout 25
```

```
Switch(config-line)#
```

```
  exit
```

This example shows how show line information.

Switch#

  show line

### **Console**

  Session Timeout : 15 (minutes)

  History Count : 128

  Password Retry : 3

  Silent Time : 0 (seconds)

### **Telnet**

  Telnet Server : disabled

  Session Timeout : 20 (minutes)

  History Count : 128

  Password Retry : 3

  Silent Time : 0 (seconds)

### **SSH**

  SSH Server : disabled

  Session Timeout : 25 (minutes)

  History Count : 128

  Password Retry : 3

Silent Time : 0 (seconds)

# **Password-Thresh**

## **Syntax**

```
password-thresh <0-120>
```

## **Parameter**

<0-120> Specify password fail retry number. 0 means no limit.

## **Default**

Default password fail retry number is 3.

## **Mode**

Line Configuration

## **Usage**

Use “password-thresh” command to specify the password fail retry number for CLI running on console, telnet or ssh service. When user input password to login and authenticate failed, the fail retry number will increase one. After fail retry number exceed configured one, the CLI will block login for the period of silent time which configured by the command “silent-time”.

## **Example**

This example shows how to change the console fail retry number to 4, the telnet fail retry number to 5 and the ssh fail retry number to 6.

```
Switch(config)#  
line console  
Switch(config-line)#  
password-thresh 4  
Switch(config-line)#  
exit  
Switch(config)#  
line telnet  
Switch(config-line)#  
password-thresh 5  
Switch(config-line)#  
exit  
Switch(config)#  
line ssh  
Switch(config-line)#  
password-thresh 6  
Switch(config-line)#  
exit
```

This example shows how show line information.

Switch#

  show line

### **Console**

  Session Timeout : 10 (minutes)

  History Count : 128

  Password Retry : 4

  Silent Time : 0 (seconds)

### **Telnet**

  Telnet Server : disabled

  Session Timeout : 10 (minutes)

  History Count : 128

  Password Retry : 5

  Silent Time : 0 (seconds)

### **SSH**

  SSH Server : disabled

  Session Timeout : 10 (minutes)

  History Count : 128

  Password Retry : 6

Silent Time : 0 (seconds)

# Silent-Time

## Syntax

```
silent-time <0-65535>
```

## Parameter

<0-65535> Specify silent time with unit seconds. 0 means do not silent.

## Default

Default silent time is 0.

## Mode

Line Configuration

## Usage

Use “silent time” command to specify the silent time for CLI running on console, telnet or ssh service. When user input password to login and authenticate failed, the fail retry number will increase one. After fail retry number exceed configured one, the CLI will block login for the period of silent time which configured by the command “silent-time”.

## Example

This example shows how to change the console silent time to 10, the telnet silent time to 15, and the ssh silent time to 20.

```
Switch(config)#
```

```
line console
```

```
Switch(config-line)#
```

```
    silent-time 10
```

```
Switch(config-line)#
```

```
    exit
```

```
Switch(config)#
```

```
    line telnet
```

```
Switch(config-line)#
```

```
    silent-time 15
```

```
Switch(config-line)#
```

```
    exit
```

```
Switch(config)#
```

```
    line ssh
```

```
Switch(config-line)#
```

```
    silent-time 20
```

```
Switch(config-line)#
```

```
    exit
```

This example shows how show line information.

```
Switch#
```

```
    show line
```

## **Console**

Session Timeout : 10 (minutes)

History Count : 128

Password Retry : 3

Silent Time : 10 (seconds)

## **Telnet**

Telnet Server : disabled

Session Timeout : 10 (minutes)

History Count : 128

Password Retry : 3

Silent Time : 15 (seconds)

## **SSH**

SSH Server : disabled

Session Timeout : 10 (minutes)

History Count : 128

Password Retry : 3

Silent Time : 20 (seconds)

# History

## Syntax

history <1-256>

no history

## Parameter

<1-256> Specify maximum CLI history entry number.

## Default

Default maximum history entry number is 128.

## Mode

Line Configuration

## Usage

Use the "history" command to specify the maximum commands of history numbers for the CLI running on the console, telnet, or ssh service. Every command input by the user will record in the history buffer. If all history commands exceed the configured history number, older commands will be deleted from the buffer. Use the "no history" to disable the history feature. Use the "show history" to show all history commands.

## Example

This example shows how to change console history number to 100, telnet history number to 150 and ssh history number to 200.

```
Switch(config)#  
  line console  
  
Switch(config-line)#  
  history 100  
  
Switch(config-line)#  
  exit  
  
Switch(config)#  
  line telnet  
  
Switch(config-line)#  
  history 150  
  
Switch(config-line)#  
  exit  
  
Switch(config)#  
  line ssh  
  
Switch(config-line)#  
  history 200  
  
Switch(config-line)#  
  exit
```

This example shows how show line information.

Switch#

  show line

### **Console**

  Session Timeout : 10 (minutes)

  History Count : 100

  Password Retry : 3

  Silent Time : 0 (seconds)

### **Telnet**

  Telnet Server : disabled

  Session Timeout : 10 (minutes)

  History Count : 150

  Password Retry : 3

  Silent Time : 0 (seconds)

### **SSH**

  SSH Server : disabled

  Session Timeout : 10 (minutes)

  History Count : 200

  Password Retry : 3

Silent Time : 0 (seconds)

Switch#

  show history

Maximun History Count: 100

1. enable

2. configure

3. line console

4. exit

5. show history

6. line

7. exit

8. show history

9. configure

10. line

11. line console

12. exit

13. line console

15. exit

16. show history

17. exit

18. show history

# Clear Service

## Syntax

```
clear (telnet | ssh)
```

## Parameter

<b>telnet</b>	Clear all telnet sessions.
<b>ssh</b>	Clear all ssh sessions

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “clear service” command to kill all existing sessions for the select service.

## Example

This example shows how to enable the telnet service and show the current telnet service status.

Switch#

```
clear telnet
```

# **SSL**

## **Syntax**

ssl

## **Parameter**

## **Default**

No default value for this command.

## **Mode**

Global Configuration

## **Usage**

Use "ssl" command to generate security certificate files such as RSA, DSA.

## **Example**

This example shows how to generate certificate files.

Switch(config)#

ssl

This example shows how to show the certificate file lists.

Switch#

show flash

# Ping

## Syntax

```
ping HOSTNAME [count <1-999999999>]
```

## Parameter

HOSTNAME	Specify IPv4/IPv6 address or domain name to ping.
count <1- 999999999>	Specify how many times to ping.

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “ping” command to do network ping diagnostic.

## Example

This example shows how to ping remote host 192.168.1.111.

Switch#

```
ping 192.168.1.111
```

```
PING 192.168.1.111 (192.168.1.111): 56 data bytes
```

```
64 bytes from 192.168.1.111: icmp_seq=0 ttl=128 time=10.0 ms time=10.0 ms
```

64 bytes from 192.168.1.111: icmp\_seq=1 ttl=128 time=0.0 ms

64 bytes from 192.168.1.111: icmp\_seq=2 ttl=128 time=0.0 ms

64 bytes from 192.168.1.111: icmp\_seq=3 ttl=128 time=0.0 ms

192.168.1.111 ping statistics

4 packets transmitted, 4 packets received, 0% packet loss

round-trip min/avg/max = 0.0/2.5/10.0 ms

# Traceroute

## Syntax

```
traceroute A.B.C.D [max_hop <2-255>]
```

## Parameter

A.B.C.D	Specify IPv4 to trace.
max_hop <2-255>	Specify maximum hop to trace.

## Default

No default value for this command.

## Mode

User EXEC

Privileged EXEC

## Usage

Use “traceroute” command to do network trace route diagnostic.

## Example

This example shows how to trace route host 192.168.1.111.

Switch#

```
traceroute 192.168.1.111
```

traceroute to 192.168.1.111 (192.168.1.111), 30 hops

max, 40 byte packets

1 192.168.1.111 (192.168.1.111) 0 ms 10 ms 0 ms

# Clear ARP

## Syntax

clear arp [A.B.C.D]

show arp

## Parameter

A.B.C.D Specify specific arp entry to clear.

## Default

No default value for this command.

## Mode

User EXEC

Privileged EXEC

## Usage

Use the “clear arp” command to clear all or specific one arp entry. Use the “show arp” command to show all arp entries.

## Example

This example shows how to show arp entries.

Switch#

show arp

Address Hwtype Hwaddress Flags

Mask Iface

192.168.1.111 ether 00:0E:2E:F1:4B:3C C eth0

This example shows how to clear all arp entries.

Switch(config)#

clear arp

# Show Version

## Syntax

show version

## Parameter

None

## Default

No default value for this command.

## Mode

User EXEC

Privileged EXEC

## Usage

Use “show version” command to show loader and firmware version and build date.

## Example

This example shows how to show system version.

Switch#

```
show version
```

```
Loader Version : 1.3.0.26225
```

Loader Date : Thu May 17 15:19:42 CST 2012

Firmware Version : 2.5.0-beta.32811

Firmware Date : Mon Sep 24 19:33:42 CST 2012

# Show Info

## Syntax

show info

## Parameter

None

## Default

No default value for this command.

## Mode

User EXEC

Privileged EXEC

## Usage

Use “show info” command to show system summary information.

## Example

This example shows how to show system version.

Switch#

```
show info
```

System Name : Switch

System Location : Default Location

System Contact : Default Contact

MAC Address : DE:AD:BE:EF:01:02

IP Address : 192.168.1.1

Subnet Mask : 255.255.255.0

Loader Version : 1.3.0.26225

Loader Date : Thu May 17 15:19:42 CST 2012

Firmware Version : 2.5.0-beta.32811

Firmware Date : Mon Sep 24 19:33:42 CST 2012

System Object ID : 1.3.6.1.4.1.27282.3.2.10

System Up Time : 0 days, 1 hours, 49 mins, 29 secs

# Show History

## Syntax

show history

## Parameter

None

## Default

No default value for this command.

## Mode

User EXEC

Privileged EXEC

Global Configuration

## Usage

Use “show history” to show commands we input before.

## Example

This example shows how show history commands.

Switch#

show history

Maximun History Count: 100

1. enable
2. configure
3. line console
4. exit
5. show history
6. line
7. exit
8. show history
9. configure
10. line
11. line console
12. exit
13. line console
14. history 100
15. exit
16. show history
17. exit
18. show history

# Show Username

## Syntax

show username

## Parameter

None

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “show username” command show all user accounts in local database.

## Example

This example shows how to show existing user accounts.

Switch#

```
show username
```

```
Priv | Type | User Name |
```

```
Password
```

01 | secret ||

dnXencJRwfIV6

15 | secret | admin |

FzjrG06vfbERY

15 | secret | test |

7p57T9yMkViSUS

# Show IP

## Syntax

show ip

## Parameter

None

## Default

No default value for this command

## Mode

User EXEC

Privileged EXEC

## Usage

Use “show ip” command to show system IPv4 address, net mask and default gateway.

## Example

This example shows how to show current ipv4 address of the switch.

Switch#

```
show ip
```

IP Address: 192.168.1.200

Subnet Netmask: 255.255.255.0

Default Gateway: 192.168.1.254

# Show IP DHCP

## Syntax

show ip dhcp

## Parameter

None

## Default

No default value for this command.

## Mode

User EXEC

Privileged EXEC

## Usage

Use “show ip dhcp” command to show IPv4 dhcp client enable state.

## Example

This example shows how to show current dhcp client state of the switch.

Switch#

```
show ip dhcp
```

DHCP Status : enabled

# Show IPv6

## Syntax

show ipv6

## Parameter

None

## Default

No default value for this command.

## Mode

User EXEC

Privileged EXEC

## Usage

Use the “show ipv6” command to show the system IPv6 address, net mask, default gateway and auto config state.

## Example

This example shows how to show current ipv6 address of the switch.

Switch#

```
show ipv6
```

IPv6 DHCP Configuration : Disabled

IPv6 DHCP DUID :

IPv6 Auto Configuration : Enabled

IPv6 Link Local Address :

fe80::dcad:beff:feef:102/64

IPv6 static Address :

fe80::20e:2eff:fef1:4b3c/128

IPv6 static Gateway Address :::

IPv6 in use Address :

fe80::dcad:beff:feef:102/64

IPv6 in use Gateway Address :::

# Show IPv6 DHCP

## Syntax

```
show ipv6 dhcp
```

## Parameter

## Default

No default value for this command

## Mode

User EXEC

Privileged EXEC

## Usage

Use “show ipv6 dhcp” command to show system IPv6 dhcp client enable state.

## Example

This example shows how to show current dhcipv6 client state of the switch.

Switch#

```
show ipv6 dhcp
```

DHCPv6 Status : enabled

# Show Line

## Syntax

```
show line [(console | telnet | ssh)]
```

## Parameter

<b>console</b>	Select console line to show.
<b>telnet</b>	Select telnet line to show.
<b>ssh</b>	Select ssh line to show.

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use “show line” command to show all line configurations including session timeout, history count, password retry number and silent time. For telnet and ssh, it also shows the service enable/disable state.

## Example

This example shows how show all lines' information.

Switch#

```
show line
```

## **Console**

Session Timeout : 15 (minutes)

History Count : 128

Password Retry : 3

Silent Time : 0 (seconds)

## **Telnet**

Telnet Server : disabled

Session Timeout : 20 (minutes)

History Count : 128

Password Retry : 3

Silent Time : 0 (seconds)

## **SSH**

SSH Server : disabled

Session Timeout : 25 (minutes)

History Count : 128

Password Retry : 3

Silent Time : 0 (seconds)

# Chapter 5

# Cable Diagnostics

# Show Cable-Diag Interfaces

## Syntax

logging

no logging

## Parameter

N/A

## Default

logging

## Mode

Global Configuration

## Usage

Display the estimated length of copper cable attached to the ports.

show cable-diag interface all

Display the estimated length of copper cables attached to all ports.

show cable-diag interface

Disable the estimated length of copper cable attached to port fa1.

## **Example**

```
Switch(config)#  
    show cable-diag interfaces fa1
```

Port | Length [meters]

fa1 | 5.55

# Chapter 6

# DHCP Snooping

# IP DHCP Snooping

## Syntax

ip dhcp snooping

no ip dhcp snooping

## Parameter

None

## Default

DHCP snooping is disabled

## Mode

Global Configuration

## Usage

Use the ip dhcp snooping command to enable DHCP Snooping function. Use the no form of this command to disable.

## Example

The example shows how to enable DHCP Snooping on VLAN 1. You can verify settings by the following show ip dhcp snooping command.

```
switch(config)#
```

```
    ip dhcp snooping
```

```
switch(config)#  
  ip dhcp snooping vlan 1  
switch(config)#  
  show ip dhcp snooping  
DHCP Snooping : enabled  
Enable on following Vlans : 1  
circuit-id default format: vlan-port  
remote-id: : 00:11:22:33:44:55 (Switch Mac in Byte Order)
```

# IP DHCP Snooping VLAN

## Syntax

```
ip dhcp snooping vlan VLAN-LIST
```

## Parameter

VLAN-LIST Specify VLAN ID or a range of VLANs to enable or disable dynamic Arp inspection

## Default

Default is disabled on all VLANs

## Mode

Global Configuration

## Usage

Use the ip arp inspection vlan command to enable VLANs on DHCP Snooping function. Use the no form of this command to disable VLANs on DHCP Snooping function

## Example

The example shows how to enable VLAN 1-100 on DHCP Snooping, and then disable VLAN 30- 40 on DHCP Snooping. You can verify settings by the following show ip dhcp snooping command.

```
switch(config)#
```

```
vlan 1-100
```

```
switch(config)#
exit
switch(config)#
  ip dhcp snooping
switch(config)#
  ip dhcp snooping vlan 1-100
switch(config)#
  show ip dhcp snooping
DHCP Snooping : enabled
Enable on following Vlans : 1-100
circuit-id default format: vlan-port
remote-id: : 00:11:22:33:44:55 (Switch Mac in Byte Order)
switch(config)#
  no ip dhcp snooping vlan 30-40
switch(config)#
  show ip dhcp snooping
DHCP Snooping : enabled
Enable on following Vlans : 1-29,41-100
circuit-id default format: vlan-port
```

remote-id: : 00:11:22:33:44:55 (Switch Mac in Byte Order)

# IP DHCP Snooping Trust

## Syntax

ip dhcp snooping trust

no ip dhcp snooping trust

## Parameter

None

## Default

DHCP snooping trust is disabled

## Mode

Interface Configuration

## Usage

Use the ip dhcp snooping trust command to set trusted interface. The switch does not check DHCP packets that are received on the trusted interface; it simply forwards it. Use the no form of this command to set untrusted interface.

## Example

The example shows how to set interface gi1 to trust. You can verify settings by the following show ip dhcp snooping interface command.

```
switch(config)#
```

```
interface gi1
```

```
switch(config)#  
    ip dhcp snooping trust  
switch(config)#  
    do show ip dhcp snooping interface gi1  
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |  
gi1 | Trusted | None | disabled | disabled |
```

# IP DHCP Snooping Verify

## Syntax

```
ip dhcp snooping verify mac-address
```

```
[no] ip dhcp snooping verify mac-address
```

## Parameter

None

## Default

DHCP snooping verify mac-address is disabled.

## Mode

Interface Configuration

## Usage

Use the ip dhcp snooping verify command to verify MAC address function on interface. The “mac-address” drop DHCP packets that chaddr and ethernet-source-mac is not match.

## Example

The example shows how to set interface gi1 to validate “mac-address”. You can verify settings by the following show ip dhcp snooping interface command.

```
switch(config)#
```

```
interface gi1
```

```
switch(config-if)#  
    ip dhcp snooping verify mac-address  
switch(config)#  
    do show ip dhcp snooping interface gi1  
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |  
gi1 | Untrusted | None | enabled | disabled |
```

# IP DHCP Snooping Rate Limit

## Syntax

```
ip dhcp snooping rate-limit <1-50>
```

```
[no] ip dhcp snooping rate-limit
```

## Parameter

<1-50> Set 1 to 50 PPS of DHCP packet rate limitation

## Default

Default is un-limited of DHCP packet

## Mode

Interface Configuration

## Usage

Use the ip dhcp snooping rate-limit command to set rate limitation on interface. The switch drop DHCP packets after receives more than configured rate of packets per second. Use the no form of this command to return to default settings.

## Example

The example shows how to set rate limit to 30 pps on interface gi1. You can verify settings by the following show ip dhcp snooping interface command.

```
switch(config)#
```

```
interface gi1
```

```
switch(config)# ip dhcp snooping rate-limit 30
switch(config)# do show ip dhcp snooping interface gi1
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |
gi1 | Untrusted | 30 | disabled | disabled |
```

# Clear IP DHCP Snooping Statistics

## Syntax

```
clear ip dhcp snooping interfaces IF_PORTS statistics
```

## Parameter

IF\_PORTS specifies ports to clear statistics

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the clear ip dhcp snooping interfaces statistics command to clear statistics that are recorded on interface.

## Example

The example shows how to clear statistics on interface gi1. You can verify settings by the following show ip dhcp snooping interface statistics command.

switch#

```
clear ip dhcp snooping interfaces gi1 statistics
```

switch#

```
show ip dhcp snooping interfaces gi1 statistics
```

Interfaces | Forwarded | Chaddr Check Dropped | Untrust Port Dropped |

Untrust Port With Option82 Dropped | Invalid Drop

gi1 | 0 | 0 | 0 | 0 | 0

# Show IP DHCP Snooping

## Syntax

```
show ip dhcp snooping
```

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip dhcp snooping command to show the settings of the DHCP Snooping feature.

## Example

The example shows how to show settings of DHCP Snooping

```
switch(config)#
```

```
    show ip dhcp snooping
```

```
DHCP Snooping : enabled
```

```
Enable on following Vlans : 1
```

circuit-id default format: vlan-port

remote-id: : 00:11:22:33:44:55 (Switch Mac in Byte Order)

# IP Show IP DHCP Snooping Interface

## Syntax

```
show ip dhcp snooping interfaces IF_PORTS
```

```
show ip dhcp snooping interfaces IF_PORTS statistics
```

## Parameter

IF\_PORTS specifies ports to show statistics

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip dhcp snooping interfaces command to show settings or statistics of interface.

## Example

The example shows how to show settings of interface gi1.

```
switch#
```

```
show ip dhcp snooping interface gi1
```

Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |

gi1 | Untrusted | None | enabled | disabled |

The example shows how to show statistics of interface gi1.

switch#

```
show ip dhcp snooping interfaces gi1 statistics
```

Interfaces | Forwarded | Chaddr Check Dropped | Untrust Port Dropped |

Untrust Port With Option82 Dropped | Invalid Drop

```
gi1 | 0 | 0 | 0 | 0 | 0
```

# Show IP DHCP Snooping Binding

## Syntax

```
show ip dhcp snooping binding
```

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip dhcp snooping binding command to show binding entries that are learned by DHCP Snooping.

## Example

The example shows how to show binding entries that learned by DHCP Snooping.

```
switch#
```

```
    show ip dhcp snooping binding
```

Bind Table: Maximum Binding Entry Number 192

Port | VID | MAC Address | IP | Type | Lease Time

fa1 | 1 | 48:5B:39:C7:12:62 | 192.168.1.100(255.255.255.255)|DHCP Snooping | 86400

# IP DHCP Snooping Option

## Syntax

ip dhcp snooping option

no ip dhcp snooping option

## Parameter

None

## Default

DHCP snooping option82 is disabled

## Mode

Interface Configuration

## Usage

Use the ip dhcp snooping option command to enable the insert option82 content into the packet. Use the no form of this command to disable it.

## Example

The example shows how to enable option82 insertion. You can verify settings by the following show ip dhcp snooping interface command.

```
switch(config)#
```

```
interface gi1
```

```
switch(config)#  
  ip dhcp snooping option  
switch(config)#  
  do show ip dhcp snooping interface gi1  
Interfaces | Trust State | Rate (pps) | hwaddr Check | Insert Option82 |  
gi1 | Untrusted | None | disabled | enabled |
```

# IP DHCP Snooping Option Action

## Syntax

```
ip dhcp snooping option action (drop|keep|replace)
```

```
no ip dhcp snooping option action
```

## Parameter

<b>Drop</b>	Drop packets with option82 that are received from un trusted port.
<b>Keep</b>	Keep original option82 content in packet.
<b>Replace</b>	Replace option82 content by switch setting op Drop packets with option82 that are received from un trusted port.

## Default

DHCP snooping option82 is drop

## Mode

Interface Configuration

## Usage

Use the ip dhcp snooping option action command to set the action when it receives packets with the option82 content.  
Use the no form of this command to restore to the default settings.

## **Example**

The example shows how to set action to replace option82 content. You can verify settings by the following show running-config command.

```
switch(config)#
  interface gi1
switch(config)#
  ip dhcp snooping option action replace
```

# IP DHCP Snooping Option Circuit-ID

## Syntax

```
ip dhcp snooping [vlan <1-4094>] option circuit-id STRING
```

```
no ip dhcp snooping [vlan <1-4094>] option circuit-id
```

## Parameter

Vlan <1-4094>	VLAN ID to set user defined circuit-id string
STRING	Circuit-id string, 1 to 63 ASCII characters, no spaces.

## Default

Default circuit-id is port id + vlan id in byte format

## Mode

Interface Configuration

## Usage

Use the ip dhcp snooping option circuit-id command to set the user-defined circuit-id string. The Circuit-id is per port per VLAN setting. If a VLAN is not found to use a user-defined circuit-id, then it will use it per port circuit-id string. Use the no form of this command to default setting.

## Example

The example shows how to set a user-defined circuit-id string on interface gi1 and VLAN 1. You can verify settings by the following show running-config command.

```
switch(config)#  
interface gi1  
switch(config)#  
ip dhcp snooping vlan 1 option circuit-id test
```

# IP DHCP Snooping Option Remote-ID

## Syntax

```
ip dhcp snooping option remote-id STRING
```

```
no ip dhcp snooping option remote-id
```

## Parameter

STRING Remote-id string, 1 to 63 ASCII characters, no spaces.

## Default

Default remote-id is the switch MAC address in byte order.

## Mode

Global Configuration

## Usage

Use the ip dhcp snooping option remote-id command to set the user-defined remote-id string. Remote-id is a global and unique string. Use the no form of this command to set the default settings.

## Example

The example shows how to set a user-defined remote-id string on switch. You can verify settings by the following show ip dhcp snooping option remote-id.

```
switch(config)#
```

```
    ip dhcp snooping option remote-id test_remote
```

```
switch(config)#  
show ip dhcp snooping option remote-id  
Remote ID: test_remote
```

# Show IP DHCP Snooping Option

## Syntax

```
show ip dhcp snooping option remote-id
```

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip dhcp snooping option remote-id command to show remote-id string.

## Example

The example shows how to show remote-id string.

```
switch(config)#  
      show ip dhcp snooping option remote-id
```

Remote ID: test\_remote

# IP DHCP Snooping Database

## Syntax

```
ip dhcp snooping database flash
```

```
ip dhcp snooping database tftp (A.B.C.D|HOSTNAME) NAME
```

```
no ip dhcp snooping database
```

## Parameter

(A.B.C.D HOSTNAME)	Specify the IP address or hostname of remote TFTP server
NAME	Input name of backup file

## Default

DHCP snooping database is disabled

## Mode

Global Configuration

## Usage

Use the ip dhcp snooping database command to enable the DHCP Snooping database agent. The “flash” means that it will write a backup file to the switch local drive. The “tftp” means that it will write a backup file to the remote TFTP server. Use the no form of this command to disable it.

## Example

The example shows how to enable DHCP Snooping database agent and write backup file to remote TFTP server with file name “backup\_file”. You can verify settings by the following show ip dhcp snooping database command.

```
switch(config)#  
ip dhcp snooping database tftp 192.168.1.50 backup_file  
switch(config)#  
show ip dhcp snooping database  
Type : tftp: 192.168.1.50  
FileName : backup_file  
Write delay Timer : 300 seconds  
Abort Timer : 300 seconds  
Agent Running : Running  
Delay Timer Expiry : 300 seconds  
Abort Timer Expiry : 299  
Last Succeeded Time : None  
Last Failed Time : None  
Last Failed Reason : No failure recorded.  
Total Attempts : 1

```

# IP DHCP Snooping Database Write-Delay

## Syntax

```
ip dhcp snooping database write-delay <15-86400>
```

## Parameter

<15-86400> specifies the seconds of the timeout. Specify the duration for which the transfer should be delayed after the binding database changes.

## Default

DHCP snooping database write-delay is 300 seconds

## Mode

Global Configuration

## Usage

Use the ip dhcp snooping database write-delay command to modify the write-delay timer. Use the no form of this command to set the default settings.

## Example

The example shows how to set write-delay timer to 60 seconds. You can verify settings by the following show ip dhcp snooping database command.

```
switch(config)#  
ip dhcp snooping database write-delay 60
```

```
switch(config)#  
show ip dhcp snooping database  
Type : tftp: 192.168.1.50  
FileName : backup_file  
Write delay Timer : 60 seconds  
Abort Timer : 300 seconds  
Agent Running : Running  
Delay Timer Expiry : 300 seconds  
Abort Timer Expiry : 299  
Last Succeeded Time : None  
Last Failed Time : None  
Last Failed Reason : No failure recorded.  
Total Attempts : 1  
Successful Transfers : 0 Failed Transfers : 0  
Successful Reads : 0 Failed Reads : 0  
Successful Writes : 0 Failed Writes : 0
```

```
switch(config)#  
show ip dhcp snooping database  
Type : tftp: 192.168.1.50  
FileName : backup_file  
Write delay Timer : 60 seconds  
Abort Timer : 300 seconds  
Agent Running : Running  
Delay Timer Expiry : 300 seconds  
Abort Timer Expiry : 299  
Last Succeeded Time : None  
Last Failed Time : None  
Last Failed Reason : No failure recorded.  
Total Attempts : 1  
Successful Transfers : 0 Failed Transfers : 0  
Successful Reads : 0 Failed Reads : 0  
Successful Writes : 0 Failed Writes : 0
```

# IP DHCP Snooping Database Timeout

## Syntax

```
ip dhcp snooping database timeout <0-86400>
```

## Parameter

<15-86400> specifies the seconds of timeout. Specify (in seconds) how long to wait for the database transfer process to finish before stopping the process. Use 0 to define an infinite duration, which means to continue trying the transfer indefinitely.

## Default

DHCP snooping database timeout is 300 seconds

## Mode

Global Configuration

## Usage

Use the ip dhcp snooping database timeout command to modify the timeout timer. Use the no form of this command to set the default settings.

## Example

The example shows how to set timeout timer to 60 seconds. You can verify settings by the following show ip dhcp snooping database command.

```
switch(config)#  
ip dhcp snooping database timeout 60
```

```
switch(config)#  
show ip dhcp snooping database  
Type : tftp: 192.168.1.50  
FileName : backup_file  
Write delay Timer : 300 seconds  
Abort Timer : 60 seconds  
Agent Running : Running  
Delay Timer Expiry : 300 seconds  
Abort Timer Expiry : 299  
Last Succeeded Time : None  
Last Failed Time : None  
Last Failed Reason : No failure recorded.  
Total Attempts : 1  
Successful Transfers : 0 Failed Transfers : 0  
Successful Reads : 0 Failed Reads : 0  
Successful Writes : 0 Failed Writes : 0
```

# Clear IP DHCP Snooping Database Statistics

## Syntax

```
clear ip dhcp snooping database statistics
```

## Parameter

None

## Default

No default is defined.

## Mode

Global Configuration

## Usage

Use the clear ip dhcp snooping database statistics command to clear statistics of the DHCP Snooping database.

## Example

The example shows how to clear statistics of DHCP Snooping agent. You can verify settings by the following show ip dhcp snooping database command.

```
switch(config)#  
    clear ip dhcp snooping database statistics  
switch(config)#  
    show ip dhcp snooping database
```

Type : tftp: 192.168.1.50

FileName : backup\_file

Write delay Timer : 300 seconds

Abort Timer : 60 seconds

Agent Running : Running

Delay Timer Expiry : 300 seconds

Abort Timer Expiry : 299

Last Succeeded Time : None

Last Failed Time : None

Last Failed Reason : No failure recorded.

Total Attempts : 0

Successful Transfers : 0 Failed Transfers : 0

Successful Reads : 0 Failed Reads : 0

Successful Writes : 0 Failed Writes : 0

# Renew IP DHCP Snooping Database

## Syntax

```
renew ip dhcp snooping database
```

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the renew ip dhcp snooping database command to renew the DHCP Snooping database from a backup file.

## Example

The example shows how to renew the DHCP Snooping database. You can verify settings by the following show ip dhcp snooping database and show ip dhcp snooping binding commands.

```
switch(config)#  
      show ip dhcp snooping database
```

Type : tftp: 192.168.1.50

FileName : backup\_file

Write delay Timer : 300 seconds

Abort Timer : 60 seconds

Agent Running : Running

Delay Timer Expiry : 300 seconds

Abort Timer Expiry : 299

Last Succeeded Time : None

Last Failed Time : None

Last Failed Reason : No failure recorded.

Total Attempts : 1

Successful Transfers : 1 Failed Transfers : 0

Successful Reads : 1 Failed Reads : 0

Successful Writes : 0 Failed Writes : 0

switch# show ip dhcp snooping binding

Bind Table: Maximum Binding Entry Number 192

Port | VID | MAC Address | IP | Type | Lease Time

# Show IP DHCP Snooping Database

## Syntax

```
show ip dhcp snooping database
```

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip dhcp snooping database command to show settings of DHCP Snooping agent.

## Example

The example shows how to show settings of DHCP Snooping agent.

```
switch(config)#  
      show ip dhcp snooping database
```

Type : tftp: 192.168.1.50

FileName : backup\_file

Write delay Timer : 300 seconds

Abort Timer : 60 seconds

Agent Running : Running

Delay Timer Expiry : 300 seconds

Abort Timer Expiry : 299

Last Failed Time : None

Last Failed Reason : No failure recorded.

Total Attempts : 1

Successful Transfers : 1 Failed Transfers : 0

Successful Reads : 1 Failed Reads : 0

Successful Writes : 0 Failed Writes : 0

# Chapter 7

## DOS

# DoS

## Syntax

```
dos (syn-fin | xma | null-scan | sport-less1024 | icmp-frag-pkts | pod | tcpblat | udp-blat | land | da-eq-sa)
no dos (syn-fin | xma | null-scan | sport-less1024 | icmp-frag-pkts | pod | tcp-blat | udp-blat | land | da-eq-sa)
dos smurf <0-31>
dos tcp-hdr-min <0-255>
dos icmp-ping-max <0-65535>
dos ipv6-min-frag <0-65535>
no dos smurf <0-31>
no dos tcp-hdr-min <0-255>
no dos icmp-ping-max <0-65535>
no dos ipv6-min-frag <0-65535>
```

## Parameter

<b>syn-fin</b>	Enable/Disable syn-fin protection.
<b>xma</b>	Enable/Disable xma protection.
<b>null-scan</b>	Enable/Disable null-scan protection.
<b>sport-less1024</b>	Enable/Disable sport-less1024 protection.
<b>icmp-frag-pkts</b>	Enable/Disable icmp-frag-pkts protection.
<b>pod</b>	Enable/Disable pod protection.
<b>tcp-blat</b>	Enable/Disable tcp-blat protection.
<b>udp-blat</b>	Enable/Disable udp-blat protection.
<b>land</b>	Enable/Disable land protection.
<b>da-eq-sa</b>	Enable/Disable da-eq-sa protection.
<b>smurf</b>	<0-31> Specify smurf length.
<b>tcp-hdr-min &lt;0-255&gt;</b>	Specify tcp-hdr-min length.
<b>icmp-ping-max &lt;0-65535&gt;</b>	Specify icmp-ping-max size.
<b>ipv6-min-frag &lt;0-65535&gt;</b>	Specify ipv6-min-frag length.

## Default

Default enable state of all DoS types are disabled.

Default smurf length is 24.

Default tcp-hdr-min length is 20.

Default icmp-ping-max size is 512.

## **Default**

Default enable state of all DoS types are disabled.

Default smurf length is 24.

Default tcp-hdr-min length is 20.

Default icmp-ping-max size is 512.

Default ipv6-min-frag length is 1280

## **Mode**

Global Configuration

## **Usage**

DoS is used to protect malicious attack from other devices. This command can configure DUT to enable/disable following types of attacks.

syn-fin: A TCP packet with the SYN and FIN flags set.

xma: TCP sequence number is zero, and the FIN/URG/PSH flags are set.

null-scan: TCP sequence number is zero, and all control flags are zeroes.

sport-less1024: TCP SYN packets with source port less than 1024.

icmp-frag-pkts: Fragmented ICMP packets.

Pod: Ping packets that length are larger than 65535 bytes.

tcp-blat: Both the source and the destination TCP port are the same.

udp-blat: Both the source and the destination UDP port are the same.

land: Both the source and the destination IPv4/IPv6 addresses are the same.

da-eq-sa: Both the source and the destination MAC addresses are the same.

smurf: ICMP echo request packet that destination IPv4 address is broadcast address.

tcp-hdr-min: TCP packet that header length is less than the configured value.

icmp-ping-max: PING packet with the length.

ipv6-min-frag: IPv6 fragmented packets (not including the last one) that payload length less than 1240 bytes.

## Example

This example shows how to enable syn-fin and smurf with length 30 on interface fa1.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    dos syn-fin
```

```
Switch(config-if)#
```

```
    dos smurf 30
```

This example shows how to show current dos state on interface fa1

```
Switch#
```

```
    show dos interfaces fa1
```

```
Port | Type | State (Length)
```

```
fa1 |
```

- | syn-fin | enabled
- | xma | disabled
- | null-scan | disabled
- | sport-less1024 | disabled
- | icmp-frag-pkts | disabled
- | pod | disabled
- | tcp-blat | disabled
- | udp-blat | disabled
- | land | disabled
- | da-eq-sa | disabled
- | smurf | enabled (30)
- | tcp-hdr-min | disabled
- | icmp-ping-max | disabled
- | ipv6-min-frag | disabled

# Show DoS

## Syntax

```
show dos interfaces IF_PORTS
```

## Parameter

IF\_PORTS Enable/Disable syn-fin protection

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use "show dos" command to show dos configuration on selected ports.

## Example

This example shows how to show current dos state on interface fa1.

This example shows how to show current dos state on interface fa1

Switch#

```
show dos interfaces fa1
```

Port | Type | State (Length)

```
fa1 |
| syn-fin | enabled
| xma | disabled
| null-scan | disabled
| sport-less1024 | disabled
| icmp-frag-pkts | disabled
| pod | disabled
| tcp-blat | disabled
| udp-blat | disabled
| land | disabled
| da-eq-sa | disabled
| smurf | enabled (30)
| tcp-hdr-min | disabled
| icmp-ping-max | disabled
| ipv6-min-frag | disabled
```

# **Chapter 8**

# **Dynamic ARP Inspection**

# IP ARP Inspection

## Syntax

ip arp inspection

no ip arp inspection

## Parameter

None

## Default

Dynamic Arp inspection is disabled

## Mode

Global Configuration

## Usage

Use the ip arp inspection command to enable Dynamic Arp Inspection function. Use the no form of this command to disable.

## Example

The example shows how to enable Dynamic Arp Inspection on VLAN 1. You can verify settings by the following show ip arp inspection command.

```
switch(config)#
```

```
    ip arp inspection
```

```
switch(config)#  
  ip arp inspection vlan 1  
switch(config)#  
  show ip arp inspection  
Dynamic ARP Inspection: enabled  
Enable on Vlans: 1
```

# IP ARP Inspection VLAN

## Syntax

ip arp inspection vlan VLAN-LIST

no ip arp inspection vlan VLAN-LIST

## Parameter

VLAN-LIST Specify VLAN ID or a range of VLANs to enable or disable dynamic

Arp inspection

## Default

**Default is disabled on all VLANs**

## Mode

Global Configuration

## Usage

Use the ip arp inspection vlan command to enable VLANs on Dynamic Arp Inspection function. Use the no form of this command to disable VLANs on the Dynamic Arp Inspection function.

## Example

The example shows how to enable VLAN 1-100 on the Dynamic Arp Inspection, and then disable VLAN 30-40 on the Dynamic Arp Inspection. You can verify settings by the following show ip arp inspection command.

```
switch(config)#
  vlan 1-100
switch(config)#
  exit
switch(config)#
  ip arp inspection
switch(config)#
  ip arp inspection vlan 1-100
switch(config)#
  show ip arp inspection
Dynamic ARP Inspection : enabled
Enable on Vlans : 1-100
switch(config)#
  no ip arp inspection vlan 30-40
switch(config)#
  show ip arp inspection
Dynamic ARP Inspection : enabled
Enable on Vlans : 1-29, 41-100
```

# IP ARP Inspection Trust

## Syntax

ip arp inspection trust

no ip arp inspection trust

## Parameter

None

## Default

Dynamic Arp inspection trust is disabled

## Mode

Interface Configuration

## Usage

Use the ip arp inspection trust command to set trusted interface. The switch does not check ARP packets that are received on the trusted interface; it simply forwards it. Use the no form of this command to set untrusted interface

## Example

The example shows how to set interface gi1 to trust. You can verify settings by the following show ip arp inspection interface command.

```
switch(config)#
```

```
interface gi1
```

```
switch(config)#  
  ip arp inspection trust  
switch(config)#  
  do show ip arp inspection interface gi1  
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero |  
gi1 | Trusted | None | disabled | disabled | disabled/disabled
```

# IP ARP Inspection Validate

## Syntax

```
ip arp inspection validate src-mac  
ip arp inspection validate dst-mac  
ip arp inspection validate ip [allow-zeros]  
no ip arp inspection validate src-mac  
no ip arp inspection validate dst-mac  
no ip arp inspection validate ip [allow-zeros]
```

## Parameter

None

## Default

Default is disabled of all validation

## Mode

Interface Configuration

## Usage

Use the ip arp inspection validate command to enable validate function on interface. The “src-mac” drop ARP requests and reply packets that arp-sender-mac and ethernetsource-mac is not match. The “dst-mac” drop ARP reply packets that arp-target-mac and ethernet-dst-mac is not match. The “ip” drop ARP request and reply packets that sender-ip is invalid

such as broadcast multicast all zero IP address and drop ARP reply packets that target-ip is invalid. The “allow-zeros” means won’t drop all zero IP address. Use the no form of this command to disable validation.

## Example

The example shows how to set interface gi1 to validate “src-mac” “dst-mac” and “ip allow zeros”. You can verify settings by the following show ip arp inspection interface command.

```
switch(config)#
  interface gi1
switch(config-if)#
  ip arp inspection validate src-mac
switch(config-if)#
  ip arp inspection validate dst-mac
switch(config-if)#
  ip arp inspection validate ip allow-zeros
switch(config)#
  do show ip arp inspection interface gi1
```

Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero |  
gi1 | Untrusted | 30 | disabled | disabled | disabled/disabled

# IP ARP Inspection Rate Limit

## Syntax

```
ip arp inspection rate-limit <1-50>
```

```
[no] ip arp inspection rate-limit
```

## Parameter

<1-50> Set 1 to 50 PPS of DHCP packet rate limitation

## Default

Default is un-limited of ARP packet

## Mode

Interface Configuration

## Usage

Use the ip arp inspection rate-limit command to set rate limitation on interface. The switch drop ARP packets after receives more than configured rate of packets per second. Use the no form of this command to return to default settings.

## Example

The example shows how to set rate limit to 30 pps on interface gi1. You can verify settings by the following show ip arp inspection interface command.

```
switch(config)#
  interface gi1
switch(config)#
  ip arp inspection rate-limit 30
switch(config)#
  do show ip arp inspection interface gi1
Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero |
gi1 | Untrusted | 30 | disabled | disabled | disabled/disabled
```

# Clear IP ARP Inspection Statistics

## Syntax

```
clear ip arp inspection interfaces IF_PORTS statistics
```

## Parameter

IF\_PORTS specifies ports to clear statistics

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the clear ip arp inspection interfaces statistics command to clear statistics that are recorded on interface.

## Example

The example shows how to clear statistics on interface gi1. You can verify settings by the following show ip arp inspection interface statistics command.

```
switch#
```

```
  clear ip arp inspection interfaces gi1 statistics
```

```
switch#
```

```
  show ip arp inspection interfaces gi1 statistics
```

Port| Forward |Source MAC Failures|Dest MAC Failures|

SIP Validation Failures|DIP Validation Failures|IP-MAC Mismatch Failures

gi1|0|0|0|0|0|0|0

# Show IP ARP Inspection

## Syntax

```
show ip dhcp snooping
```

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip arp inspection command to show settings of Dynamic Arp Inspection

## Example

The example shows how to show settings of Dynamic Arp Inspection

```
switch(config)#  
      show ip arp inspection
```

Dynamic ARP Inspection : enabled

Enable on Vlans : 1

# Show IP ARP Inspection Interface

## Syntax

show ip arp inspection interfaces IF\_PORTS

show ip arp inspection interfaces IF\_PORTS statistics

## Parameter

IF\_PORTS specifies ports to show statistics

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip arp inspection interfaces command to show settings or statistics of interface.

## Example

The example shows how to show settings of interface gi1.

switch#

```
show ip arp inspection interface gi1
```

Interfaces | Trust State | Rate (pps) | SMAC Check | DMAC Check | IP Check/Allow Zero |  
gi1 | Trusted | None | disabled | disabled | disabled/disabled

The example shows how to show statistics of interface gi1.

switch#

show ip arp inspection interfaces gi1 statistics

Port| Forward |Source MAC Failures|Dest MAC Failures|

SIP Validation Failures|DIP Validation Failures|IP-MAC Mismatch Failures

gi1| 0 | 0 | 0 | 0 | 0 | 0 | 0

# Chapter 9

# IGMP Snooping

# IP IGMP Snooping

## Syntax

ip igmp snooping

no ip igmp snooping

## Parameter

None

## Default

ip igmp snooping

## Mode

Global Configuration

## Usage

“no ip igmp snooping” will clear all ip igmp snooping dynamic group and dynamic router port, and make the static ip igmp group invalid. Then do not learning the dynamic group and router port by igmp message. The configure can use “show ip igmp snooping”.

## Example

The following example specifies that set ip igmp snooping test.

Switch(config)#

  ip igmp snooping

Switch#

show ip igmp snooping

### **IGMP Snooping Status**

Snooping : Enabled

Report Suppression : Enabled

Operation Version : v2

Forward Method : mac

Unknown Multicast Action : Flood

Switch(config)#

no ip igmp snooping

Switch#

show ip igmp snooping

# IP IGMP Snooping Report-Suppression

## Syntax

```
[no] ip igmp snooping report-suppression
```

## Parameter

none

## Default

```
ip igmp snooping report-suppression
```

## Mode

Global Configuration

## Usage

“no ip igmp snooping report-suppression” will disable the igmp v1/v2 igmp report suppression function. The receive report will then forward to the vlan router ports. The configuration can use “show ip igmp snooping”.

## Example

The following example specifies the disable ip igmp snooping report-suppression test.

```
Switch(config)#
```

```
  no ip igmp snooping report-suppression
```

```
Switch#
```

```
  show ip igmp snooping
```

## **IGMP Snooping Status**

Snooping : Enabled

Report Suppression : Disabled

Operation Version : v2

Forward Method : mac

Unknown Multicast Action : Flood

# IP IGMP Snooping Version

## Syntax

```
ip igmp snooping version (2|3)
```

## Parameter

(2|3) Ip igmp snooping running version 2 or 3

## Default

```
ip igmp snooping version 2
```

## Mode

Global Configuration

## Usage

“ip igmp snooping version 3” will remove all ipv4 group entries when the forward method is src-dst-ip. When the forward method is mac, it will remove the dynamic group entry. The same is from v3 change to v2. For this, all querier versions will update to version 2. The configuration can use “show ip igmp snooping”.

## Example

The following example specifies that set ip igmp snooping version 3 test.

```
Switch(config)#
```

```
    ip igmp snooping version 3
```

```
Switch#
```

```
    show ip igmp snooping
```

# IP IGMP Snooping Unknown-Multicast Action

## Syntax

```
ip igmp snooping unknown-multicast action (drop | flood |router-port)
```

## Parameter

(drop | flood | routerport) Unknown multicast action for drop|flood|router-port

## Default

```
ip igmp snooping unknown-multicast action flood
```

## Mode

Global Configuration

## Usage

When igmp snooping and mld snooping are disabled, it can't set an action to drop or router-port. When disabling igmp snooping & mld snooping, it sets unknown multicast action flood. When the action is router-port to flood or drop, it will delete the unknown multicast group entry. If the lookup mode is src-dst-ip, when changed, the unknown action will delete all the dynamic groupd. The configuration can use "show ip igmp snooping".

## Example

The following example specifies that set ip igmp unknown multicast action router-port test.

```
Switch(config)#
```

```
    ip igmp snooping
```

```
Switch(config)#  
    ip igmp snooping unknown-multicast action router-port
```

```
Switch#  
    show ip igmp snooping
```

### **IGMP Snooping Status**

```
Snooping : Enabled  
Report Suppression : Disabled  
Operation Version : v2  
Forward Method : mac  
Unknown Multicast Action : Router Port
```

```
Switch#  
    show ip igmp snooping
```

```
Switch(config)#  
    no ip igmp snooping  
  
IGMP Snooping Status  
Snooping : Disabled  
Report Suppression : Disabled  
Operation Version : v2  
Forward Method : mac
```

Unknown Multicast Action : Flood

# IP IGMP Snooping Forward-Method

## Syntax

```
ip igmp snooping forward-method (mac |src-dst-ip)
```

## Parameter

(mac | src-dst-ip) Multicast lookup method is DMAC OR DIP+SIP

## Default

```
ip igmp snooping forward-method mac
```

## Mode

Global Configuration

## Usage

When changing the lookup method, it will remove all groups. The configuration can use "show ip igmp snooping".

## Example

The following example specifies that set ip igmp lookup method is src-dst-ip test.

```
Switch(config)#
```

```
    ip igmp forward-method src-dst-ip
```

```
Switch#
```

```
    show ip igmp snooping
```

## **IGMP Snooping Status**

Snooping : Disabled

Report Suppression : Disabled

Operation Version : v2

Forward Method : src-dst-ip

# IP IGMP Snooping Querier

## Syntax

```
ip igmp snooping vlan <VLAN-LIST> querier  
no ip igmp snooping [vlan <VLAN-LIST>] querier  
ip igmp snooping vlan <VLAN-LIST> querier version (2|3)
```

## Parameter

VLAN-LIST	specifies VLAN ID list to set
(2 3)	Query version 2 or 3

## Default

```
no ip igmp snooping querier
```

## Mode

Global Configuration

## Usage

When enabling ip igmp vlan querier, there will be a process router selection. The selection will send general and specific queries. The configuration can use "show ip igmp snooping querier".

## Example

## Example

The following example specifies that set ip igmp snooping querier test. test must be create static vlan firstly.

```
Switch(config)#
```

```
vlan 2
```

```
Switch(config-vlan)#
```

```
exit
```

```
Switch(config)#
```

```
ip igmp snooping vlan 2 querier
```

```
Switch(config)#
```

```
exit
```

```
Switch#
```

```
show ip igmp snooping querier
```

```
VID | State | Status | Version | Querier IP
```

```
1 | Disabled | Non-Querier | No | -----
```

```
2 | Enabled | Querier | v2 | 192.168.1.254
```

```
Switch#
```

```
configure
```

```
Switch(config)#
```

```
ip igmp snooping version 3
```

```
Switch(config)#  
ip igmp snooping vlan 2 querier version 3
```

```
Switch(config)#  
do show ip igmp snooping querier  
VID | State | Status | Version | Querier IP  
1 | Disabled | Non-Querier | No | -----  
2 | Enabled | Querier | v3 | 192.168.1.254
```

```
Switch(config)#  
no ip igmp snooping querier  
Switch(config)#  
do show ip igmp snooping querier
```

# IP IGMP Snooping VLAN

## Syntax

```
ip igmp snooping vlan VLAN-LIST
```

```
no ip igmp snooping vlan VLAN-LIST
```

## Parameter

VLAN-LIST specifies VLAN ID list to set

## Default

```
no ip igmp snooping vlan 1-4094
```

## Mode

Global Configuration

## Usage

"No ip igmp snooping vlan 1" will clear vlans for all ip igmp snooping dynamic groups and dynamic router ports, and make the static ip igmp group invalid depending on which vlan ID is vlan 1. Then there is no learning of the dynamic group and router port by igmp messages for vlan 1. The configuration can use show ip igmp snooping vlan 1.

## Example

The following example specifies that set ip igmp snooping vlan test. The test must enable ip igmp snooping first.

```
Switch(config)#
```

```
    ip igmp snooping
```

```
Switch(config)#
```

IGMP Snooping query interval: admin 125 sec oper 125 sec  
IGMP Snooping query max response : admin 10 sec oper 10 sec  
IGMP Snooping last member query counter: admin 2 oper 2  
IGMP Snooping last member query interval: admin 1 sec oper 1 sec  
IGMP Snooping last immediate leave: disabled  
IGMP Snooping mrouter port learn by pim-dvmrp: enabled

Switch(config)#  
  no ip igmp snooping vlan 1

Switch#  
  show ip igmp snooping vlan 1

IGMP Snooping is globaly enabled  
IGMP Snooping VLAN 1 admin : disabled  
IGMP Snooping operation mode : disabled  
IGMP Snooping robustness: admin 2 oper 2

IGMP Snooping query max response : admin 10 sec oper 10 sec  
IGMP Snooping last member query counter: admin 2 oper 2  
IGMP Snooping last member query interval: admin 1 sec oper 1 sec  
IGMP Snooping last immediate leave: disabled

IGMP Snooping mrouter port learn by pim-dvmrp: enabled

# IP IGMP Snooping VLAN Parameters

## Syntax

```
ip igmp snooping vlan <VLAN-LIST> last-member-query-count <1-7>
no ip igmp snooping vlan <VLAN-LIST> last-member-query-count
ip igmp snooping vlan <VLAN-LIST> last-member-query-interval <1- 60>
no ip igmp snooping vlan <VLAN-LIST> last-member-query-interval
[no] ip igmp snooping vlan <VLAN-LIST> mrouter learn pim-dvmrp
[no] ip igmp snooping vlan <VLAN-LIST> fastleave
ip igmp snooping vlan <VLAN-LIST> query-interval <30-18000>
no ip igmp snooping vlan <VLAN-LIST> query-interval
ip igmp snooping vlan <VLAN-LIST> response-time <5-20>
no ip igmp snooping vlan <VLAN-LIST> response-time
ip igmp snooping vlan <VLAN-LIST> robustness-variable <1-7>
no ip igmp snooping vlan <VLAN-LIST> robustness-variable
```

## Parameter

<b>VLAN-LIST</b>	specifies VLAN ID list to set
<b>last-member-query-count &lt;1-7&gt;</b>	specifies last member query count to set. Default is 2
<b>last-member-queryinterval &lt;1-60&gt;</b>	specifies last member query interval to set. Default is 1
<b>query-interval &lt;30-18000&gt;</b>	specifies query interval to set. Default is 125
<b>response-time &lt;5- 20&gt;</b>	specifies a response time to set. default is 10
<b>robustness-variable &lt;1-7&gt;</b>	specifies a robustness value to set, default is 2

## Default

no ip igmp snooping vlan 1-4094 last-member-query-count

no ip igmp snooping vlan 1-4094 last-member-query-interval

ip igmp snooping vlan 1-4094 mrouter learn pim-dvmrp

no ip igmp snooping vlan 1-4094 fastleave

no ip igmp snooping vlan 1-4094 query-interval

no ip igmp snooping vlan 1-4094 response-time

no ip igmp snooping vlan 1-4094 robustness-variable

## Mode

Global Configuration

## **Usage**

"no ip igmp snooping vlan 1 (last-member-query-count | last-member-queryinterval | query-interval | response-time | robustness-variable)" will set the vlan parameters to default. The cli settings will change the ip igmp vlan parameters to the admin settings. The configuration can use show ip igmp snooping vlan 1.

## **Example**

The following example specifies that set ip igmp snooping vlan parameters test.

```
Switch(config)#
    ip igmp snooping vlan 1 fastleave
Switch(config)#
    ip igmp snooping vlan 1 last-member-query-count 5
Switch(config)#
    ip igmp snooping vlan 1 last-member-query-interval 3
Switch(config)#
    ip igmp snooping vlan 1 query-interval 100
Switch(config)#
    ip igmp snooping vlan 1 response-time 12
Switch(config)#
    ip igmp snooping vlan 1 robustness-variable 4
```

Switch#

show ip igmp snooping vlan 1

IGMP Snooping is globally enabled

IGMP Snooping VLAN 1 admin : enabled

IGMP Snooping operation mode : enabled

IGMP Snooping robustness: admin 4 oper 2

IGMP Snooping query interval: admin 100 sec oper 125 sec

IGMP Snooping query max response : admin 12 sec oper 10 sec

IGMP Snooping last member query counter: admin 5 oper 2

IGMP Snooping last member query interval: admin 3 sec oper 1 sec

IGMP Snooping last immediate leave: enabled

IGMP Snooping mrouter port learn by pim-dvmrp: enabled

# IP IGMP Snooping Static Port

## Syntax

[no] ip igmp snooping vlan <VLAN-LIST> static-port IF\_PORTS

[no] ip igmp snooping vlan <VLAN-LIST> forbidden-port IF\_PORTS

## Parameter

VLAN-LIST	specifies VLAN ID list to set
IF_PORTS	specifies a port list to set or remove

## Default

None static/forbidden ports

## Mode

Global Configuration

## Usage

'ip igmp snooping vlan 1 static-port fa1-2' will add static port fa1-2 for vlan 1. The all known vlan 1 ipv4 group will add the static ports. "ip igmp snooping vlan 1 forbidden-port fa3-4" will add forbidden port fa3-4. for vlan 1. The all known vlan 1 ipv4 group will remove the forbidden ports.

The configuration can use "show ip igmp snooping forward-all".

## Example

The following example specifies that set ip igmp snooping static/forbidden port test.

```
Switch(config)#  
    ip igmp snooping vlan 1 static -port fa1-2
```

```
Switch(config)#  
    ip igmp snooping vlan 1 forbidden -port fa3-4
```

```
Switch#  
    show ip igmp snooping forward-all vlan 1
```

IGMP Snooping VLAN : 1

IGMP Snooping static port : fa1-2

IGMP Snooping forbidden port : fa3-4

# IP IGMP Snooping Static Router Port

## Syntax

[no] ip igmp snooping vlan <VLAN-LIST> static-router-port IF\_PORTS

[no] ip igmp snooping vlan <VLAN-LIST> forbidden-router-port IF\_PORTS

## Parameter

VLAN-LIST	specifies VLAN ID list to set
IF_PORTS	specifies a port list to set or remove

## Default

None static/forbidden router ports

## Mode

Global Configuration

## Usage

"ip igmp snooping vlan 1 static-router-port fa1-2" will add static the router port fa1-2 for vlan 1. "ip igmp snooping vlan 1 forbidden-router-port fa2" will add the forbidden router port fa2 for vlan 1. This will also remove fa2 from static the router port. The forbidden router port receive query will not forward. The configuration can use 'show ip igmp snooping router'.

## Example

The following example specifies that set ip igmp snooping static/forbidden test.

```
Switch(config)#  
    ip igmp snooping vlan 1 static-router-port fa1-2  
Switch(config)#  
    ip igmp snooping vlan 1 forbidden-router-port fa2  
Switch#  
    show ip igmp snooping router
```

# IP IGMP Snooping Static Group

## Syntax

```
[no] ip igmp snooping vlan <VLAN-LIST> static-group <ip-addr> interface IF_PORT
```

```
[no] ip igmp snooping vlan <VLAN-LIST> group <ip-addr>
```

```
show ip igmp snooping groups [(dynamic | static)]
```

```
clear ip igmp snooping groups [(dynamic | static)]
```

## Parameter

<b>VLAN-LIST</b>	specifies VLAN ID list to set
<b>ip-addr</b>	specifies multicast group ipv4 address
<b>IF_PORT</b>	specifies port id to set or remove

## Default

None

## Mode

Global Configuration

## Usage

'ip igmp snooping vlan 1 static-group 224.1.1.1 interface fa1' will add static group. The static group will not learn from other dynamic ports. If the dynamic group exists, then the static group will overlap with the dynamic group. If you remove the last member of static group, the static group will be deleted. If the static group wants to validate itself , you must enable igmp snooping vlan and ip igmp snooping. The configuration can use "show ip igmp snooping group [(dynamic |

static)]” to display. You can also use “no ip igmp snooping vlan 1 group 224.1.1.1” to delete the static group. In addition, you can use clear ip igmp snooping groups to delete the static group.

## Example

The following example specifies that set ip igmp snooping static group test.

Switch(config)#

  ip igmp snooping vlan 1 static-group 224.1.1.1 interface

  fa1

Switch(config)#

  ip igmp snooping vlan 1 static-group 224.1.1.1 interface

  fa2

Switch#

  show ip igmp snooping groups

VLAN | Gourp IP Address | Type | Life(Sec) | Port

1 | 224.1.1.1 | Static| -- | fa1-2

Total Number of Entry = 1

Switch#

  clear ip igmp snooping groups static

Switch# s

  how ip igmp snooping groups

VLAN | Gourp IP Address | Type | Life(Sec) | Port

Total Number of Entry = 0

# IP IGMP Profile

## Syntax

```
ip igmp profile <1-128>
```

```
profile range ip <ip-addr> [ip-addr] action (permit | deny)
```

```
show ip igmp profile [<1-128>]
```

## Parameter

<1-128>	specifies profile ID
<ip-addr>	Start ipv4 multicast address
[ip-addr]	End ipv4 multicast address
(permit   deny)	Permit: Allow Multicast address range ip address learning Deny: Do not allow Multicast address range ip address learning

## Default

None

## Mode

```
ip igmp profile <1-128>: Global Configuration
```

```
profile range ip <ip-addr> [ip-addr] action (permit | deny):
```

```
igmp profile config mode
```

## **Usage**

Use the 'ip igmp profile 1' entry for the igmp profile config mode. Use 'profile range ip 224.1.1.1 224.1.1.8 action permit' to configure the profile entry. The profile entry is used by the port filter. The configuration can use 'show ip igmp profile [<1-128>]' to display.

## **Example**

The following example specifies that set ip igmp profile test:

```
Switch(config)#
  ip igmp profile 1
Switch(config-igmp-profile)#
  profile range ip 224.1.1.1 224.1.1.8 action permit
Switch(config-igmp-profile)#
  show ip igmp profile
IP igmp profile index: 1
IP igmp profile action: permit
Range low ip: 224.1.1.1
Range high ip: 224.1.1.8
Switch(config-igmp-profile)#
  exit
```

```
Switch(config)#  
    ip igmp profile 10  
Switch(config-igmp-profile)#  
    profile range ip 224.1.1.5 224.1.1.10 action  
        deny  
Switch(config-igmp-profile)#  
    show ip igmp profile  
IP igmp profile index:  
    10  
IP igmp profile action:  
    deny  
Range low ip:  
    224.1.1.5  
Range high ip:  
    224.1.1.10  
Switch(config-igmp-profile)#  
    exit  
Switch(config)#  
    exit
```

Switch#

show ip igmp profile

Range low ip:

224.1.1.1

Range high ip:

224.1.1.8

IP igmp profile index:

10

IP igmp profile action:

deny

Range low ip:

224.1.1.5

Range high ip:

224.1.1.10

# IP IGMP Filter

## Syntax

ip igmp filter <1-128>

[no] ip igmp filter

Show ip igmp filter [interfaces IF\_PORTS]

## Parameter

<1-128>	Specifies profile ID
[interfaces IF_PORTS]	Specifies interfaces to display

## Default

None

## Mode

Interface mode

## Usage

After creating the ip igmp profile entry, you can use 'ip igmp filter 1' to bind a profile for a port. When the port binds a profile, then the port learning group will update. If the group is not matched to the profile rule it will remove the port from the group. Static groups are excluded. The configuration can use 'show ip igmp filter' to display.

## Example

The following example specifies that set ip igmp filter test.

The configure must create ip igmp profile firstly.

```
Switch(config)#
  ip igmp profile 1
Switch(config-igmp-profile)#
  profile range ip 224.1.1.1 224.1.1.8 action permit
Switch(config-igmp-profile)#
  exit
Switch(config)#
  interface fa1
Switch(config-if)#
  ip igmp filter 1
Switch(config-if)#
  exit
Switch(config)#
  exit
Switch#
  show ip igmp filter
Port ID | Profile ID
fa1 : 1
fa2 : None
```

fa3 : None

# IP IGMP Max-Groups

## Syntax

ip igmp max-groups <0-512>

no ip igmp max-groups

ip igmp max-groups action (deny | replace)

Show ip igmp max-group [interfaces IF\_PORTS]

Show ip igmp max-group action [interfaces IF\_PORTS]

## Parameter

<1-128>	Specifies profile ID
(deny   replace)	Deny: Current port igmp group arrived max-groups, don't add group. Replace: Current port igmp group arrived max-groups, remove port from rand group, and add port to group.

## Default

no ip igmp max-groups

ip igmp max-groups action deny

## Mode

Interface mode

## **Usage**

Use 'ip igmp max-groups 10' to limit port learning. The max group number is 10. When the port has learned more than 10 groups, then the rest of the groups will be removed from the port from the group. Static groups are excluded. The configuration can use 'show ip igmp max-group & show ip igmp max-group action' to display.

## **Example**

The following example specifies that set ip igmp max-groups and action is replace test.

```
Switch(config)#  
    interface fa1  
Switch(config-if)#  
    ip igmp max-groups 10  
Switch(config-if)#  
    ip igmp max-groups action replace  
Switch(config-if)#  
    exit  
Switch(config)#  
    exit  
Switch#  
    show ip igmp max-group  
Port ID | Max Group
```

fa1 : 10

fa2 : 1024

fa3 : 1024

--More--

Switch#

show ip igmp max-group action

# Clear IP IGMP Snooping Groups

## Syntax

```
clear ip igmp snooping groups [(dynamic | static)]
```

## Parameter

<b>none</b>	Clear ip igmp groups include dynamic and static
<b>(dynamic   static)</b>	Ip igmp group type is dynamic or static

## Default

Clear all ip igmp groups

## Mode

privileged mode

## Usage

This command will clear the ip igmp groups for dynamic or static or all of type. The configuration can use 'show ip igmp snooping groups' to check.

## Example

Switch#

```
clear ip igmp snooping groups static
```

Switch#

```
show ip igmp snooping groups
```

Switch#

clear ip igmp snooping groups

Switch#

show ip igmp snooping groups

# Clear IP IGMP Snooping Statistics

## Syntax

```
clear ip igmp snooping statistics
```

## Parameter

none

## Default

none

## Mode

privileged mode

## Usage

This command will clear the igmp statistics. The configuration can use show ip igmp snooping.

## Example

The following example specifies that clear ip igmp snooping statistics test.

Switch#

```
clear ip igmp snooping statistics
```

Switch#

```
show ip igmp snooping
```

# Show IP IGMP Snooping Counters

## Syntax

```
show ip igmp snooping groups counters
```

## Parameter

none

## Default

none

## Mode

privileged mode

## Usage

This command will display the ip igmp group counter include static group.

## Example

The following example specifies that display ip igmp snooping group counter test.

Switch#

```
show ip igmp snooping counters
```

Total ip igmp snooping group number: 0

# Show IP IGMP Snooping Groups

## Syntax

```
show ip igmp snooping groups [(dynamic | static)]
```

## Parameter

<b>none</b>	Show ip igmp groups include dynamic and static]
<b>(dynamic   static)</b>	Display Ip igmp group type is dynamic or static

## Default

display all ip igmp groups

## Mode

privileged mode

## Usage

This command will display the ip igmp groups for dynamic or static or all of type.

## Example

The following example specifies that show ip igmp snooping groups test.

Switch#

```
show ip igmp snooping groups
```

Switch#

show ip igmp snooping groups dynamic

Switch#

show ip igmp snooping groups static

# Show IP IGMP Snooping Router

## Syntax

```
show ip igmp snooping router [(dynamic | forbidden | static )]
```

## Parameter

<b>none</b>	Show ip igmp router include dynamic and static and forbidden
<b>(dynamic   forbidden   static)</b>	Display Ip igmp router info for different type

## Default

display all router info

## Mode

privileged mode

## Usage

This command will display the ip igmp router info.

## Example

The following example specifies that show ip igmp snooping router test.

Switch#

```
show ip igmp snooping router
```

Switch#

  show ip igmp snooping router dynamic

Switch#

  show ip igmp snooping rotuer static

Switch#

  show ip igmp snooping rotuer forbidden

# Show IP IGMP Snooping Querier

## Syntax

```
show ip igmp snooping querier
```

## Parameter

none Show all vlan ip igmp querier info.

## Default

none

## Mode

privileged mode

## Usage

This command will display all of the static vlan ip igmp querier info.

## Example

The following example specifies that show ip igmp snooping querier test.

Switch#

```
show ip igmp snooping querier
```

VID		State		Status		Version		Querier IP
-----	--	-------	--	--------	--	---------	--	------------

1		Disabled		Non-Querier		No		-----
---	--	----------	--	-------------	--	----	--	-------

Total Entry	1
-------------	---

# Show IP IGMP Snooping

## Syntax

show ip igmp snooping

## Parameter

none Show ip igmp snooping global info.

## Default

none

## Mode

privileged mode

## Usage

This command will display ip igmp snooping global info.

## Example

The following example specifies that show ip igmp snooping test.

Switch#

```
show ip igmp snooping
```

# Show IP IGMP Snooping Forward-All

## Syntax

```
show ip igmp snooping forward-all [vlan VLAN-LIST]
```

## Parameter

none Show all ip igmp snooping vlan forward-all info

[vlan VLAN-LIST] Show specifies vlan of ip igmp forward info.

## Default

Show all vlan ip igmp forward all info

## Mode

privileged mode

## Usage

This command will display ip igmp snooping forward all info.

## Example

The following example specifies that show ip igmp snooping forward-all test.

Switch#

```
show ip igmp snooping forward-all
```

IGMP Snooping VLAN : 1

IGMP Snooping static port : None

IGMP Snooping forbidden port : None

# Show IP IGMP Snooping Profile

## Syntax

```
show ip igmp profile [<1-128>]
```

## Parameter

none Show all ip igmp snooping profile info

[<1-128>] Show specifies index profile info

## Default

Show all ip igmp profile info

## Mode

privileged mode

## Usage

This command will display ip igmp profile info.

## Example

The following example specifies that show ip igmp profile test.

Switch#

```
show ip igmp profile
```

IP igmp profile index: 1

IP igmp profile action: permit

Range low ip: 224.1.1.1

fa4 : deny  
fa5 : deny
```

# Chapter 10

## IP Source Guard

# IP Source Verify

## Syntax

ip source verify

ip source verify mac-and-ip

no ip source verify

## Parameter

None

## Default

IP Source Guard is disabled

## Mode

Interface Configuration

## Usage

Use the ip source verify command to enable IP Source Guard function. Default IP Source Guard filter source IP address. The “mac-and-ip” filters not only source IP address but also source MAC address. Use the no form of this command to disable.

## Example

The example shows how to enable IP Source Guard with source IP address filtering on interface gi1.

```
Switch(config)# interface gi1  
switch(config-if)#  
    ip source verify
```

The example shows how to enable IP Source Guard with source IP and MAC address filtering on interface gi2. You can verify settings by the following show ip source interfaces command.

```
Switch(config)#  
    interface gi2  
switch(config-if)#  
    ip source verify mac-and-ip  
switch(config-if)#  
    do show ip source interfaces gi1-2  
Port | Status | Max Entry | Current Entry  
gi1 | Verify MAC+IP | No Limit | 0  
gi2 | disabled | No Limit | 0
```

# IP Source Binding

## Syntax

```
ip source binding A:B:C:D:E:F vlan <1-4094> A.B.C.D interface IF_PORT
```

```
no ip source binding A:B:C:D:E:F vlan <1-4094> A.B.C.D interface IF_PORT
```

## Parameter

<b>A:B:C:D:E:F</b>	Specify a MAC address of a binding entry
<b>VLAN &lt;1-4094&gt;</b>	Specify a VLAN ID of a binding entry
<b>A.B.C.D</b>	Specify IP address and MASK of a binding entry.
<b>IF_PORT</b>	Specify interface of a binding entry.

## Default

Default is no binding entry.

## Mode

Global Configuration

## Usage

Use the ip source binding command to create a static IP source binding entry has an IP address, its associated MAC address VLAN ID Ainterface. Use the no form of this command to delete static entry.

## **Example**

The example shows how to add a static IP source binding entry. You can verify settings by the following show ip source binding command.

```
Switch(config)#  
    ip source binding 00:11:22:33:44:55 vlan 1 192.168.1.55 interface fa1  
switch(config)#  
    do show ip source binding  
  
Bind Table: Maximum Binding Entry Number 192  
Port | VID | MAC Address | IP | Type | Lease Time  
fa1 | 1 | 00:11:22:33:44:55 | 192.168.1.55(255.255.255.255)| Static | NA
```

# Show IP Source Interface

## Syntax

```
show ip source interfaces IF_PORTS
```

## Parameter

IF\_PORTS specifies ports to show

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip source interface command to show settings of IP Source Guard of interface

## Example

The example shows how to show settings of IP Source Guard of interface gi1

```
switch#
```

```
    show ip source interfaces gi1
```

Port | Status | Max Entry | Current Entry

gi1 | Verify MAC+IP | No Limit | 0

# Show IP Source Binding

## Syntax

```
show ip source binding [(dynamic|static)]
```

## Parameter

<b>dynamic</b>	Show entries that added by DHCP snooping learn
<b>static</b>	Show entries that added by user

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show ip source binding command to show binding entries of IP Source Guard.

## Example

The example shows how to show static binding entries of IP Source Guard.

```
switch#
```

```
    show ip source binding
```

Bind Table: Maximum Binding Entry Number 192

Port | VID | MAC Address | IP | Type | Lease Time

fa1 | 1 | 00:11:22:33:44:55 | 192.168.1.55(255.255.255.255)| Static | NA

# Chapter 11

# Link Aggregation

# Lag Load-balance

## Syntax

```
lag load-balance (src-dst-mac | src-dst-mac-ip)
```

## Parameter

<b>src-dst-mac</b>	Specify algorithm to balance traffic by using source and destination MAC address for all packets.
<b>src-dst-mac-ip</b>	Specify algorithm to balance traffic by using source and destination IP address for IP packets and using source and destination MAC address for non-IP packets.

## Default

Default load balance algorithm is src-dst-mac

## Mode

Global Configuration

## Usage

Link aggregation group port should transmit packets spread to all ports to balance traffic loading. There are two algorithm supported and this command allow you to select the algorithm.

## **Example**

This example shows how to change load balance algorithm to src-dst-mac-ip.

Switch(config)#

```
    lag load-balance src-dst-mac-ip
```

This example shows how to show current load balance algorithm.

Switch#

```
    show lag
```

Load Balancing: src-dst-mac-ip.

# LACP System-Priority

## Syntax

```
lacp system-priority <1-65535>
```

```
no lacp system-priority
```

## Parameter

<1-65535> Specify system priority value

## Default

Default system priority is 1.

## Mode

Global Configuration

## Usage

LACP system priority is used for two connected DUT to select the master switch. A lower system priority value has a higher priority. And the DUT with a higher priority can decide which ports are able to join the LAG. Use "no lacp system-priority" to restore to the default priority value. The only way to show this configuration is using the "show running-config" command.

## Example

This example shows how to configure lacp system priority to 1000.

```
Switch(config)#
```

# LACP Port-Priority

## Syntax

```
lacp port-priority <1-65535>
```

## Parameter

<1-65535> Specify port priority value

## Default

Default port priority is 1.

## Mode

Interface Configuration

## Usage

LACP port priority is used for two connected DUT to select aggregation ports. A lower port priority value has a higher priority. And the port with the higher priority will be selected into LAG first. The only way to show this configuration is using the “show running-config” command.

## Example

This example shows how to configure interface fa1 lacp port priority to 100.

```
Switch(config)#
```

```
interface fa1
```

```
Switch(config-if)#  
lacp port-priority 100
```

# LACP Timeout

## Syntax

```
lacp timeout (long | short)
```

## Parameter

long Send LACP packet every 30 seconds.

short Send LACP packet every 1 second.

## Default

Default LACP timeout is long.

## Mode

Interface Configuration

## Usage

LACP need to send LACP packet to partner switch to check the link status. This command configures the interval of sending LACP packets. The only way to show this configuration is using the "show running-config" command.

## Example

This example shows how to configure interface fa1 lacp timeout to short.

```
Switch(config)# interface fa1
```

Switch(config-if)#

lacp timeout short

# LAG

## Syntax

lag <1-8> mode (static | active | passive)

no lag

## Parameter

<1-8>	Specify the LAG id for the interface
static	Specify the LAG to be static mode and join the interface into this LAG.
active	Specify the LAG to be dynamic mode and join the interface into this LAG with LACP active port.
passive	Specify the LAG to be dynamic mode and join the interface into this LAG with LACP passive port.

## Default

There is no LAG in default

## Mode

Interface Configuration

## Usage

Link aggregation group function allows you to aggregate multiple physical ports into one logic port to increase bandwidth. This command makes normal port join into the specific LAG logic port with static or dynamic mode. And use "no lag" to leave the LAG logic port.

## Example

This example shows how to create a dynamic LAG and join fa1-fa3 to this LAG.

```
Switch(config)#
```

```
    interface range fa1-3
```

```
Switch(config-if)#
```

```
    lag 1 mode active
```

This example shows how to show current LAG status.

```
Switch#
```

```
    show lag
```

Load Balancing: src-dst-mac-ip.

Group ID | Type | Ports

# Show Lag

## Syntax

show lag

## Parameter

None

## Default

No default values for this command.

## Mode

Privileged EXEC

## Usage

Use “show lag” command to show current LAG load balance algorithm and members active/inactive status.

## Example

This example shows how to show current LAG status.

Switch#

```
show lag
```

Load Balancing: src-dst-mac-ip.

Group ID | Type | Ports

1 | LACP | Inactive: fa1-3

# Chapter 12

## LLDP

# LLDP

## Syntax

lldp

no lldp

## Default

lldp

## Mode

Global Configuration

## Usage

The “lldp” command globally enables the LLDP RX/TX ability. The “no lldp run” command disables the LLDP RX/TX ability and the behavior when receiving a LLDP PDU would then be decided by the “lldp lldpdu” command. The LLDP enabling status is displayed by the “show lldp” command.

## Example

The following example sets LLDP enable/disable.

```
Switch121212(config)#
```

```
show lldp
```

```
Switch121212(config)#
```

```
    lldp
```

```
State: Enabled
```

```
Timer: 30 Seconds
```

```
Hold multiplier: 4
```

```
Reinit delay: 2 Seconds
```

```
Tx delay: 2 Seconds
```

```
LLDP packet handling: Flooding
```

```
Switch121212(config)#
```

```
    no lldp
```

```
Switch121212(config)#
```

```
    show lldp
```

```
State: Disabled
```

```
Timer: 30 Seconds
```

```
Hold multiplier: 4
```

```
Reinit delay: 2 Seconds
```

```
Tx delay: 2 Seconds
```

```
LLDP packet handling: Flooding
```

# LLDP Tx-Interval

## Syntax

```
lldp tx-interval <5-32768>
```

## Parameter

<5-32768> Specify the LLDP PDU TX interval in unit of second.

## Default

```
lldp tx-interval 30
```

## Mode

Global Configuration

## Usage

This command globally configures the LLDP TX interval. It should be noticed that both "lldp tx-interval" and "lldp tx-delay" affects the LLDP PDU TX time. The larger value of the two configurations decides the TX interval. The configuration could be shown by the "show lldp" command.

## Example

This example sets LLDP TX interval to 10 seconds.

```
Switch121212(config)#
```

```
lldp tx-interval 10
```

Switch121212(config)#

  show lldp

State: Disabled

Timer: 10 Seconds

Hold multiplier: 4

Reinit delay: 2 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Flooding

# LLDP Reinit-Delay

## Syntax

```
lldp reinit-delay <1-10>
```

## Parameter

<1-10> Specify the LLDP re-initial delay time in unit of second.

## Default

```
lldp reinit-delay 2
```

## Mode

Global Configuration

## Usage

This command globally configures the LLDP re-initial delay. This delay avoids the LLDP from generating too many PDUs if the port is up and down frequently. The delay starts to count down when the port links down. The port would not generate a LLDP PDU until the delay counts to zero. The configuration could be shown by the "show lldp" command.

## Example

This example sets LLDP re-initial delay to 5 seconds.

```
Switch121212(config)#
```

```
lldp reinit-delay 5
```

Switch121212(config)#

  show lldp

State: Disabled

Timer: 10 Seconds

Hold multiplier: 4

Reinit delay: 5 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Flooding

# LLDP Holdtime-Multiplier

## Syntax

```
lldp holdtime-multiplier <2-10>
```

## Parameter

<2-10> Specify the LLDP hold time multiplier.

## Default

```
lldp holdtime-multiplier 4
```

## Mode

Global Configuration

## Usage

This command globally configures the LLDP PDU hold multiplier that decides the time-to-live (TTL) value sent in LLDP advertisements: TTL = (txinterval \* holdtime-multiplier). The configuration could be shown by the "show lldp" command.

## Example

This example sets LLDP hold time multiplier to 3.

```
Switch121212(config)#
```

```
lldp holdtime-multiplier 3
```

Switch121212(config)#

  show lldp

State: Disabled

Timer: 10 Seconds

Hold multiplier: 3

Reinit delay: 2 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Flooding

# LLDP Tx-Delay

## Syntax

```
lldp tx-delay <1-8192>
```

## Parameter

<1-8192> Specify the LLDP tx delay in unit of seconds.

## Default

```
lldp tx-delay 2
```

## Mode

Global Configuration

## Usage

This command globally configures the delay in seconds between successive LLDP frame transmissions. The delay starts to count in any case that a LLDP PDU is sent by, such as a LLDP PDU advertise routine, LLDP PDU content change, port link up, etc. The configuration could be shown by the “show lldp” command.

## Example

This example sets LLDP PDU TX delay to 10.

```
Switch121212(config)#
```

```
lldp tx-delay 10
```

Switch121212(config)#

  show lldp

State: Disabled

Timer: 10 Seconds

Hold multiplier: 4

Reinit delay: 2 Seconds

Tx delay: 10 Seconds

LLDP packet handling: Flooding

# LLDP TLV-Select

## Syntax

```
lldp tlv-select TLV [TLV] [TLV] [TLV] [TLV] [TLV] [TLV] [TLV]
```

```
no lldp tlv-select
```

## Parameter

TLV Specify the selected optional TLV. Available optional TLVs are:sys-name (system name), sys-desc (system description), sys-cap (system capability), mac-phy (802.3 MAC-PHY), lag (802.3 link aggregation), maxframe-size (802.3 max frame size), and managementaddr (management address).

## Default

```
no lldp tlv-select
```

## Mode

Port Configuration

## Usage

This command per port configures the selected TLV attaching in PDU. The “no lldp tlv-select” command would remove all selected TLVs. The configuration could be shown by the “show lldp” command.

## Example

This example selects the system name, system description, system capability, 802.3 MAC-PHY, 802.3 link aggregation, 802.3 max frame size, and management address TLVs for interfaces fa1 and fa3.

```
Switch121212(config)#  
    interface range fa1,3  
Switch121212(config-if-range)#  
    lldp tlv-select port-desc sys-name sys-desc sys-cap mac-phy lag max-frame-size management-addr  
Switch121212(config-if-range)#  
    exit  
Switch121212(config)#  
    show lldp interfaces fa1,3  
  
State: Disabled  
  
Timer: 10 Seconds  
  
Hold multiplier: 3  
  
Reinit delay: 2 Seconds  
  
Tx delay: 2 Seconds  
  
LLDP packet handling: Flooding  
  
Port | State | Optional TLVs | Address  
fa1 | RX,TX | PD, SN, SD, SC | 192.168.1.254  
fa3 | RX,TX | PD, SN, SD, SC | 192.168.1.254  
  
Port ID: fa1
```

802.3 optional TLVs: 802.3-mac-phy, 802.3-lag, 802.3-max-frame-size,

management-addr

802.1 optional TLVs

PVID: Enabled

Port ID: fa3

802.3 optional TLVs: 802.3-mac-phy, 802.3-lag, 802.3-max-frame-size,

management-addr

802.1 optional TLVs

PVID: Enabled

# LLDP TLV-Select PVID

## Syntax

```
lldp tlv-select pvid (disable|enable)
```

## Parameter

(disable|enable) Specifies the LLDP 802.1 PVID TLV attach enable status.

## Default

```
lldp tlv-select pvid enable
```

## Mode

Port Configuration

## Usage

This command per port configures the 802.1 PVID TLV attach enable status. The configuration could be shown by the "show lldp" command.

## Example

This example sets the port gi1 PVID TLV attach status to disabled and the port gi2 to enabled.

```
Switch121212(config)#
```

```
    interface gi1
```

```
Switch121212(config-if-range)#
```

```
    lldp tlv-select pvid disable
```

```
Switch121212(config-if-range)#
```

```
exit
```

```
Switch121212(config)#
```

```
interface gi2
```

```
Switch121212(config-if-range)#
```

```
lldp tlv-select pvid enable
```

```
Switch121212(config-if-range)#
```

```
exit
```

```
Switch121212(config)#
```

```
show lldp interfaces gi1,gi2
```

State: Disabled

Timer: 10 Seconds

Hold multiplier: 3

Reinit delay: 2 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Flooding

gi2 | RX,TX | |192.168.1.254

Port ID: gi1

802.3 optional TLVs:

802.1 optional TLVs

PVID: Disabled

Port ID: gi2

802.3 optional TLVs:

802.1 optional TLVs

PVID: Enabled

# LLDP TLV-Select VLAN-Name

## Syntax

```
lldp tlv-select vlan-name (add|remove) VLAN-LIST
```

## Parameter

<b>(add remove)</b>	Specifies to add or remove VLAN list for LLDP 802.1 VLAN-NAME TLV.
<b>VLAN-LIST</b>	Specify VLAN list. The configured ports should be member of all the specified VLANs or the VLAN-LIST is not valid.

## Default

In default no VLAN is added

## Mode

Port Configuration

## Usage

The commands per port configuration to add or remove the VLAN list for 802.1 VLAN-NAME TLV. The configuration could be shown by the "show lldp" command

## Example

This example adds VLAN 1, 100, 4000 to VLAN-NAME TLV for port fa10.

```
Switch121212(config)#  
    vlan 100  
Switch121212(config-vlan)#  
    exit  
Switch121212(config)#  
    vlan 4000  
Switch121212(config-vlan)#  
    exit  
Switch121212(config)#  
    interface fa10  
Switch121212(config-if-range)#  
    switchport trunk allowed vlan add all  
Switch121212(config-if-range)#  
    lldp tlv-select pvid enable  
Switch121212(config-if-range)#  
    exit  
Switch121212(config)#  
    show ll dp interfaces gi1,gi2  
State: Disabled
```

Timer: 10 Seconds

Hold multiplier: 3

Reinit delay: 2 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Flooding

Port | State | Optional TLVs | Address

gi1 | RX,TX | |192.168.1.254

gi2 | RX,TX | |192.168.1.254

Port ID: gi1

802.3 optional TLVs:

802.1 optional TLVs

PVID: Disabled

Port ID: gi2

802.3 optional TLVs:

802.1 optional TLVs

PVID: Enabled

# LLDP LLDPDU

## Syntax

`lldp lld pdu (filtering|flooding|bridging)`

## Parameter

(filtering | flooding | bridging) Specifies that when LLDP is globally disabled, received LLDP packets are filtered (dropped), flooded (forwarded to all interfaces) or bridged (flooded to VLAN member ports).

## Default

`lldp lld pdu flooding`

## Mode

Global Configuration

## Usage

This command globally configures the LLDP PDU handling behavior when LLDP is globally disabled. It should be noted that if LLDP is globally enabled and the per port LLDP RX status is configured to disabled, the received LLDP PDU would be dropped instead of taking the globally disabled behavior. The configuration could be shown by the “show lldp” command.

## **Example**

This example sets LLDP disable action to bridging.

```
Switch121212(config)#
```

```
    lldp lldpdu bridging
```

```
Switch121212(config)#
```

```
    show lldp
```

State: Enabled

Timer: 30 Seconds

Hold multiplier: 4

Reinit delay: 2 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Bridging

# LLDP Rx LLDP Tx

## Syntax

```
lldp rx  
no lldp rx  
lldp tx  
no lldp tx
```

## Default

```
lldp rx  
lldp tx
```

## Mode

Port Configuration

## Usage

The commands per port configures the LLDP PDU RX and TX ability. The configuration could be shown by the "show lldp" command.

## Example

This example sets port fa1 to enable LLDP RX and TX, port fa2 to disable RX but enable TX, port fa3 to enable RX but disable TX, port fa4 to disable RX and TX.

```
Switch121212(config)#  
    interface fa1  
Switch121212(config-if)#  
    lldp rx  
Switch121212(config-if)#  
    lldp tx  
Switch121212(config-if)#  
    exit  
Switch121212(config)#  
    interface fa2  
Switch121212(config-if)#  
    no lldp rx  
Switch121212(config-if)#  
    lldp tx  
Switch121212(config-if)#  
    exit  
Switch121212(config)#  
    interface fa3
```

```
Switch121212(config-if)#
```

```
    lldp rx
```

```
Switch121212(config-if)#
```

```
    no lldp tx
```

```
Switch121212(config-if)#
```

```
    exit
```

```
Switch121212(config)#
```

```
    interface fa4
```

```
Switch121212(config-if)#
```

```
    no lldp rx
```

```
Switch121212(config-if)#
```

```
    no lldp tx
```

```
Switch121212(config-if)#
```

```
    exit
```

```
Switch121212(config)#
```

```
    show lldp interfaces fa1-4
```

```
State: Enabled
```

```
Timer: 30 Seconds
```

Hold multiplier: 4

Reinit delay: 2 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Bridging

# LLDP Med

## Syntax

lldp med

no lldp med

## Default

lldp med

## Mode

Port Configuration

## Usage

The commands per port configures the LLDP MED enable status. If LLDP MED is enabled, the LLDP MED capability TLV and other selected MED TLV would be attached. The configuration could be shown by the “show lldp med” command.

## Example

This example sets ports fa1-4 to enable LLDP MED and ports fa5-8 to disable LLDP MED.

```
Switch121212(config)#
```

```
    interface range fa1-4
```

```
Switch121212(config-if)#
```

```
    lldp med
```

```
Switch121212(config-if)#
```

```
    exit
```

```
Switch121212(config)#
```

```
    interface range fa5-8
```

```
Switch121212(config-if)#
```

```
    no lldp med
```

```
Switch121212(config-if)#
```

```
    exit
```

```
Switch121212(config)#
```

```
    show lldp interfaces fa1-8 med
```

```

# LLDP Med TLV-Select

## Syntax

```
lldp med tlv-select MEDTLV [MEDTLV] [MEDTLV] [MEDTLV]
```

```
no lldp med tlv-select
```

## Parameter

MEDTLV MED optional TLV. Available optional TLVs are : network-policy, location, poe-pse, inventory.

## Default

```
lldp med tlv-select network-policy
```

## Mode

Port Configuration

## Usage

The commands per port configures the LLDP MED TLV selection. The “no lldp med tlv-select” command would remove all selected MED TLVs over the dedicated ports. It should be noted that even if no MED TLV is selected, the MED capability TLV would be attached if a LLDP MED is enable. The configuration could be shown by the “show lldp med” command.

## Example

This example sets ports fa1-2 to select the LLDP MED network policy, location, POE-PSE, inventory TLVs, and sets ports fa3-4 to deselect all LLDP MED TLVs.

```
Switch121212(config)#  
    interface range fa1-2  
Switch121212(config-if)#  
    lldp med tlv-select network-policy location poe-pse inventory  
Switch121212(config-if)#  
    exit  
Switch121212(config)#  
    interface range fa3-4  
Switch121212(config-if-range)#  
    no lldp med tlv-select  
Switch121212(config-if-range)#  
    exit  
Switch121212(config)#  
    show lldp interfaces fa1-4 med  
Port | Capabilities | Network Policy | Location | Inventory | POE  
fa1 | Yes | Yes | Yes | Yes | Yes  
fa2 | Yes | Yes | Yes | Yes | Yes  
fa3 | Yes | No | No | No | No
```

fa4 | Yes | No | No | No | No

# LLDP Med Fast-Start-Repeat-Count

## Syntax

```
lldp med fast-start-repeat-count <1-10>
```

## Parameter

<1-10> LLDP PDU fast start TX repeat counts.

## Default

```
lldp med fast-start-repeat-count 3
```

## Mode

Global Configuration

## Usage

The commands globally configures the LLDP PDU fast start TX repeat count. When the port links are up, it will send a LLDP PDU immediately to notify the link partner. The number of LLDP PDUs sent when it links up depends on the fast -start-repeat-count configuration. The LLDP PDU fast-start transmits in intervals of one second. The fast start behavior works no matter whether the LLDP MED is enabled or not. The configuration could be shown by the "show lldp med" command.

## Example

This example sets fast start repeat count to 10.

```
Switch121212(config)#
```

```
lldp med fast-start-repeat-count 10
```

Switch121212(config)#

  show lldp med

    Fast Start Repeat Count: 10

    lldp med network-policy voice: auto

# LLDP Med Network-Policy

## Syntax

```
lldp med network-policy <1-32> app (voice|voice-signaling|guestvoice| guest-voice-signaling|softphone-voice| video-conferencing|streaming-video|video-signaling) vlan <1-4094> vlantype  
(tag|untag) priority <0-7> dscp <0-63>  
no lldp med network-policy <1-32>
```

## Parameter

<1-32>	Specify the network policy index
(voice voicesignaling  guest-voice  guest-voicesignaling  softphonevoice  videoconferencing  streamingvideo  video-signaling)	Specify the network policy application type.
<1-4094>	Specify the VLAN ID
(tag untag)	Specify the VLAN tag status
<0-7>	Specify the L2 priority
<0-63>	Specify the DHCP value

## Default

In default all network policy are cleared.

## Mode

Global Configuration

## **Usage**

The command globally configures the LLDP MED network policy table. The “lldp med network-policy” command creates a network policy entry that can be bound to ports. If the LLDP MED network policy voice auto mode is enabled, the “voice” type network policy can not be created since it is in auto mode. The “no lldp med network-policy” command clears the network policy entry of the specified index. A network policy can be cleared only when it is not bound to any port. The network policy table configuration could be shown by the “show lldp med” command.

## **Example**

This example creates 2 network policies.

```
Switch121212(config)#
```

```
    lldp med network-policy 1 app voice-signaling vlan 2
```

```
        vlan-type tag priority 3 dscp 4
```

```
Switch121212(config)#
```

```
    lldp med network-policy 32 app video-conferencing
```

```
        vlan 5 vlan-type tag priority 1 dscp 63
```

```
Switch121212(config)#
```

```
    show lldp med
```

```
Fast Start Repeat Count: 10
```

```
lldp med network-policy voice: auto
```

## **Network policy 1**

Application type: Voice Signaling

VLAN ID: 2 tagged

Layer 2 priority: 3

DSCP: 4

## **Network policy 32**

Application type: Conferencing

VLAN ID: 5 tagged

Layer 2 priority: 1

DSCP: 63

# LLDP Med Network-Policy Add|Remove

## Syntax

```
lldp med network-policy (add|remove) <1-32>
```

## Parameter

(add   remove)	Add or remove network policy binding for ports.
<1-32>	Specify the network policy index

## Default

```
lldp med fast-start-repeat-count 3
```

## Mode

Port Configuration

## Usage

The command per port configures the network policy binding for port interface. The bound network policy of one port should be configured with different types. If a network policy TLV is selected over a port, the bound network policies would be attached in LLDP MED PDU. The configuration of network policy binding could be shown by the "show lldp med" command.

## **Example**

This example binds network policy for interface fa1 and fa2.

```
Switch121212(config)#
```

```
    show lldp med
```

Fast Start Repeat Count: 10

```
lldp med network-policy voice: auto
```

### **Network policy 1**

Application type: Voice Signaling

VLAN ID: 2 tagged

Layer 2 priority: 3

DSCP: 4

### **Network policy 32**

Application type: Conferencing

VLAN ID: 5 tagged

Layer 2 priority: 1

DSCP: 63

```
Switch121212(config)#
```

```
    interface range fa1,2
```

Switch121212(config-if-range)#

lldp med network-policy add 1,32

Switch121212(config)#

show lldp interfaces fa1,2 med

Port | Capabilities | Network Policy | Location | Inventory | POE

fa1 | Yes | Yes | Yes | Yes | Yes

fa2 | Yes | Yes | Yes | Yes | Yes

Port ID: fa1

Network policies: 1, 32

Port ID: fa2

Network policies: 1, 32

# LLDP Med Network-Policy Auto

## Syntax

```
lldp med network-policy auto
```

```
no lldp med network-policy auto
```

## Default

```
lldp med network-policy auto
```

## Mode

Global Configuration

## Usage

The command globally configures the network policy voice auto mode enabling status. In voice auto mode, if a network-policy TLV is selected, a voice type network policy would be attached to a PDU for which the contents come from voice VLAN configuration. This works for a voice VLAN module to exchange voice VLAN information with a link partner. If the voice auto mode is enabled, a user cannot manually create a voice type network policy; if a voice type network policy is created, the voice auto mode can not be enabled. The configuration of network policy auto mode could be shown by the "show lldp med" command.

## **Example**

This example sets the network policy auto mode to enabled and then to disabled.

```
Switch121212(config)#
```

```
    lldp med network-policy auto
```

```
Switch121212(config)#
```

```
    show lldp med
```

```
Fast Start Repeat Count: 10
```

```
lldp med network-policy voice: auto
```

```
Switch121212(config)#
```

```
    no lldp med network-policy auto
```

```
Switch121212(config)#
```

```
    show lldp med
```

```
Fast Start Repeat Count: 10
```

```
lldp med network-policy voice: manual
```

# LLDP Med Location

## Syntax

```
lldp med location (coordination|civic-address|ecs-elin) ADDR  
no lldp med location (coordination|civic-address|ecs-elin)
```

## Parameter

<b>(coordination   civic-address   ecselin)</b>	Location type to be configured. "ecs-elin" is abbreviation of emergency call service - emergency location identifier number
<b>ADDR</b>	Specify the location data. Input format is hexadecimal values without colon (for example: 1234AB). For coordination location type, the length of ADDR is 16 bytes. For civic-address, the length is 6 to 160 bytes. For ecs-elin, the length is 10 to 25 bytes.

## Default

In default all locations are cleared

## Mode

Port Configuration

## Usage

The command per port configures the LLDP MED location data. The "no lldp med location" command clears the location data. The "coordinate", "civicaddress", "ecs-elin" locations are independent, so at most three location TLVs could be sent if their data are not empty. The configuration of the location could be shown by the "show lldp interface PORT med" command.

## Example

This example sets the location data for interface fa1.

```
Switch121212(config)#
```

```
    interface fa1
```

```
Switch121212(config-if)#
```

```
    lldp med location coordinate112233445566778899AABBCCDDEEFF00
```

```
Switch121212(config-if)#
```

```
    lldp med location civic-address 112233445566
```

```
Switch121212(config-if)#
```

```
    lldp med location ecs-elin112233445566778899AA
```

```
Switch121212(config)#
```

```
    show lldp interfaces fa1 med
```

Port | Capabilities | Network Policy | Location | Inventory | POE

fa1 | Yes | Yes | Yes | Yes | Yes

Port ID: fa1

Network policies: 1, 32

Location:

Coordinates: 112233445566778899AABBCCDDEEFF00

Civic-address: 112233445566

Ecs-elin: 112233445566778899AA

# Show LLDP

## Syntax

show lldp

show lldp interface IF\_NMLPORTS

## Parameter

IF\_NMLPORTS Specify the ports to display information

## Default

This command has no default value.

## Mode

Privileged, Global Configuration

## Usage

The “show lldp” and “show lldp interface” command displays LLDP global information including the LLDP enabling status, LLDP PDU TX interval, hold time multiplier, re-initial delay, TX delay, and LLDP packet handling when a LLDP is disabled. The per port information displayed includes the port LLDP RX/TX enabling status and the selected TLV to TX and IP address. The abbreviations in the optional TLVs are: port description (PD), system name (SN), system description (SD), and system capability (SC).

## Example

This example displays lldp information of port fa1 and gi1

Switch121212#

  show lldp interfaces fa1,gi1

State: Disabled

Timer: 30 Seconds

Hold multiplier: 4

Reinit delay: 2 Seconds

Tx delay: 2 Seconds

LLDP packet handling: Flooding

Port | State | Optional TLVs | Address

fa1 | RX,TX | PD, SN, SD, SC | 192.168.1.254

gi1 | RX,TX | 192.168.1.254

Port ID: fa1

802.3 optional TLVs: 802.3-mac-phy, 802.3-lag, 802.3-max-frame-size,

management-addr

802.1 optional TLVs

PVID: Enabled

Port ID: gi1

802.3 optional TLVs:

802.1 optional TLVs

PVID: Enabled

# Show LLDP Local-Device

## Syntax

show lldp local-device

show lldp interfaces IF\_NMLPORTS local-device

## Parameter

IF\_NMLPORTS Specify the ports to display information

## Default

There is no default configuration for this command.

## Mode

Privileged, Global Configuration

## Usage

The commands show the local configuration of LLDP PDU. By the commands, a user can view the contents of LLDP/ LLDP-MED TLVs that would be attached in LLDP PDU.

## **Example**

This example display the local device information.

```
Switch121212(config)#
```

```
    show lldp local-device
```

LLDP Local Device Information:

Chassis Type : Mac Address

Chassis ID : 00:12:12:12:12:12

# Show LLDP Neighbor

## Syntax

show lldp neighbor

show lldp interfaces IF\_NMLPORTS neighbor

## Parameter

IF\_NMLPORTS Specify the ports to display information

## Default

There is no default configuration for this command

## Mode

Privileged, Global Configuration

## Usage

When a LLDP PDU is received on LLDP RX enabled ports, the system would store the PDU information in a database until the time to live of the PDU counts down to zero. The command displays the received neighbor LLDP PDU information.

## Example

This example display the neighbor information.

Switch121212(config)#

show lldp neighbor

# Show LLDP TLV-Overloading

## Syntax

```
show lldp interfaces IF_NMLPORTS tlvs-overloading
```

## Parameter

IF\_NMLPORTS Specify the ports to display information

## Default

There is no default configuration for this command.

## Mode

Privileged, Global Configuration

## Usage

The LLDP PDU is composed by TLVs and a selected number TLVs may compose a large PDU that the system cannot handle. The maximum PDU length is to take the smaller jumbo frame size minus 30 bytes (30 bytes kept for a header) or 1488 bytes. The command displays the length of LLDP TLVs and if a TLV overloads the PDU length then the TLVs with a status marked "overload" would not be transmitted.

## Example

This example display the LLDP TLVs overloading status of port fa1.

```
Switch121212(config)#
```

```
show lldp interfaces fa1 tlvs-overloading
```

fa1:

TLVs Group | Bytes | Status

Mandatory | 21 | Transmitted

LLDP-MED Capabilities | 9 | Transmitted

LLDP-MED Location | 53 | Transmitted

LLDP-MED Network Policies | 20 | Transmitted

LLDP-MED POE | 9 | Transmitted

802.3 | 30 | Transmitted

Optional | 38 | Transmitted

LLDP-MED Inventory | 97 | Transmitted

802.1 | 8 | Transmitted

Total: 285 bytes

Left: 1203 bytes

# Chapter 13

# Logging

# Logging

## Syntax

logging

no logging

## Parameter

None

## Default

logging

## Mode

Global Configuration

## Usage

Enable/Disable the logging service.

## Logging

Enable the logging service. It is the global option for the logging service. The status of the logging service is available from the command “show logging”.

## No logging

Disable the logging service. When the logging service is disabled, all messages will stop logging to the system.

## Show logging

Display the global logging status. It will show the logging configuration of the system, including the global logging status, and the lists of logging services.

### Example

```
Switch(config)#
```

```
    show logging
```

```
Switch(config)#
```

```
    no logging
```

```
Switch(config)#
```

```
    show logging
```

Logging service is disabled

TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL

buffered | enabled | | emerg, alert, crit, error, warning, notice, info

```
Switch(config)#
```

```
    logging
```

```
Switch(config)#
```

```
    show logging
```

Logging service is enabled

TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL

buffered | enabled | | | emerg, alert, crit, error, warning, notice, info

# Logging Flash|Buffered

## Syntax

logging (flash|buffered) [severity <0-7>]

no logging (flash|buffered)

## Parameter

<b>flash</b>	Specify logging to flash.
<b>buffer</b>	Specify logging to RAM.
<b>severity</b>	Specify the minimum severity mask of logging message.

## Default

logging buffered

no logging flash

Parameter:

severity 6: (emerg, alert, crit, error, warning, notice, info)

## Mode

Global Configuration

## **Usage**

Enable/Disable the local capability to log messages to RAM/flash with the minimum severity. The minimum severity value is "6", including messages of severity emergency, alert, critical, error, warning, notice, and info.

### **Logging flash**

Enables the capability to log message to flash. The default minimum severity is 6. When the service is enabled, messages will start to be logged to the flash. All logging messages will be saved when the system shuts down. Only when the local logging capability of flash is enabled will the status of logging the flash service will be shown by the command "show logging".

### **Logging buffered**

Enables the capability to log messages to RAM. The default minimum severity is 6. When the service is enabled, the messages will start to be logged to RAM. All logging message will be lost when the system shuts down.

### **No logging flash**

Disables the capability to log messages to flash. Once the logging capability of flash is disabled, the status of logging the flash service will be removed from the service list shown by the command "show logging".

### **No logging buffered**

Disables the capability to log messages to RAM.

### **Show logging**

Displays the logging status. It will show the logging configuration of the system, including the global logging status and the lists of logging services. When the local logging capability is enabled, the status of the local logging (flash or buffered) will be shown by the command "show logging"; Otherwise, the logging entry will be removed from the service list.

## Example

```
Switch(config)#
```

```
    show logging
```

Logging service is enabled

```
TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL
```

```
buffered | enabled || |emerg, alert, crit, error, warning, notice, info
```

```
Switch(config)#
```

```
    no logging buffer
```

```
Switch(config)#
```

```
    show logging
```

Logging service is enabled

```
TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL
```

```
Switch(config)#
```

```
    logging buffered
```

```
Switch(config)#
```

```
    logging flash severity 5
```

```
Switc(config)h#
```

```
    show logging
```

Logging service is enabled

TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL

buffered | enabled || |emerg, alert, crit, error, warning, notice, info

flash | enabled || |emerg, alert, crit, error, warning, notice

# Logging Host

## Syntax

```
logging host <ip-addr> [port <0-65535>] [severity <0-7>] [facility(local0|local1|local2|local3|local4|local5|local6|local7)]  
no logging <ip-addr>
```

## Parameter

<b>ip-addr</b>	Specify the IP address of remote logging server.
<b>port</b>	Specify the port number of remote logging server.
<b>severity</b>	Specify the minimum severity mask of logging message.
<b>facility</b>	Specify the facility of logging messages.

## Default

N/A

Parameter:

port 514:

severity 6: (emerg, alert, crit, error, warning, notice, info)

facility: Local7

## Mode

Global Configuration

## **Usage**

Enable/Disable the capability to log message to the remote syslog server.

### **Logging host 192.168.1.100**

Enables the capability to log messages to the remote server. The default values of the parameter port is "514". The severity is "6" (emerg, alert, crit, error, warning, notice, info), and the facility is "local7". All logging messages will be sent to the remote server. Only when the remote logging capability is enabled will the status of remote logging service will be shown by the command "show logging". When an existing entry is set twice, the old setting will be replaced and modified with the new one.

### **No logging host 192.168.1.100**

Disables the capability to log messages to the remote server. When the remote logging service is disabled, the log will not be sent to the remote syslog server, and the status of remote logging entry will be removed from service list shown by the command "show command".

### **Show logging**

Displays the logging status. It will show the logging configuration of the system, including the global logging status and the lists of logging services. When the remote logging capability is enabled, the status of remote logging will be shown by the command "show logging". Otherwise, the remote logging entry will be removed from the service list.

### **Example**

Switch(config)#

```
logging host 192.168.1.100
```

Switch(config)#

```
logging host 192.168.1.100 port 2048 severity
```

3 facility local1

Switch(config)# s

  how logging

Logging service is enabled

TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL

buffered | enabled | | |emerg, alert, crit, error, warning, notice, info

flash | enabled | | |emerg, alert, crit, error, warning, notice

host | enabled | 192.168.1.100( 2048)| local1 |emerg, alert, crit, error

Switch(config)#

  no logging host 192.168.1.100

Switch(config)#

  show logging

Logging service is enabled

TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL

buffered | enabled | | |emerg, alert, crit, error, warning, notice, info

flash | enabled | | |emerg, alert, crit, error, warning, notice

# Show Logging

## Syntax

show logging

## Parameter

None

## Default

None

## Mode

Privileged, Global Configuration

## Usage

### show logging

Shows the logging configuration. The information includes the global logging service status, and the list of logging services. Status of the global logging service can be determined by the command "logging/no logging". The list of logging services shows all the active logging services.

## Example

Switch(config)#

  show logging

Logging service is enabled

TARGET | STATUS | Server (PORT) | FACILITY | LOG LEVEL

buffered | enabled | | | emerg, alert, crit, error, warning, notice, info

# Show Logging Flash|Buffered

## Syntax

```
show logging (flash|buffered)
```

## Parameter

Flash Specify showing the messages logged to flash.

Buffered Specify showing the messages logged to RAM.

## Default

None

## Mode

Privileged, Global Configuration

## Usage

Shows the messages logged to flash/RAM.

### Show logging flash

Shows the messages logged to the flash. When the capability of the service is enabled, it will show all messages logged to flash. All messages will be logged in an inverse chronological order.

### Show logging buffered

Shows the messages logged to RAM. When the capability of the service is enabled, it will show all messages logged to RAM. Logs will be lost after a system shutdown. All messages will be logged in an inverse chronological order.

## Example

```
Switch(config)#
```

```
    show logging buffered
```

Log messages in buffered

NO.	Timestamp	Category	Severity	Message
-----	-----------	----------	----------	---------

1	Jan 01 08:00:57	STP	info	Port 1 STP port state is set to Forwarding
---	-----------------	-----	------	--

2	Jan 01 08:00:42	STP	info	Port 1 STP port state is set to Learning

7	Jan 01 08:00:23	System	notice	System Startup!
---	-----------------	--------	--------	-----------------

# Clear Logging Flash|Buffered

## Syntax

```
clear logging (flash|buffered)
```

## Parameter

flash	Specify clearing the messages logged to flash.
Buffered	Specify clearing the messages logged to RAM.

## Default

None

## Mode

Privileged, Global Configuration

## Usage

Clear the message logged to flash/RAM.

### **Clear logging flash**

Clear the messages logged to flash.

### **Clear logging buffered**

Clear the messages logged to RAM.

## Example

Switch#

show logging buffered

Log messages in buffered

NO.| Timestamp | Category | Severity | Message

1| Jan 01 08:00:57| STP| info| Port 1 STP port state is set to Forwarding

2| Jan 01 08:00:42| STP| info| Port 1 STP port state is set to Learning

3| Jan 01 08:00:30| AAA| info| User " enter privileged mode from console with level '15' success

4| Jan 01 08:00:28| AAA| info| User " is authorized with privilege level 1

5| Jan 01 08:00:28| AAA| info| User " login from console success

# Chapter 14

# MAC Address Table

# Clear MAC Address-Table

## Syntax

```
clear mac address-table dynamic [interfaces IF_PORTS] [vlan <1-4094>]
```

## Parameter

IF\_PORTS Delete all dynamic addresses on the specified interface.

<1-4094> Delete all dynamic addresses on the specified VLAN

## Default

None

## Mode

Privileged EXEC

## Usage

Use the clear mac address-table Privileged EXEC command to delete a dynamic mac entry on a specified interface or VLAN, or all dynamic mac entries in a mac address table. You can verify your settings by entering the show mac address-table dynamic Privileged EXEC command.

## Example

This example shows how to delete dynamic MAC address entries on gi1

switch#

```
show mac address-table dynamic
```

VID | MAC Address | Type | Ports

1 | 00:00:E3:00:00:12 | Dynamic | fa11

1 | 00:14:78:3B:1E:E6 | Dynamic | gi1

Total number of entries: 2

Switch(config)# clear mac address-table dynamic interfaces gi1

switch#

```
show mac address-table dynamic
```

VID | MAC Address | Type | Ports

1 | 00:00:E3:00:00:12 | Dynamic | fa11

Total number of entries: 1

# MAC Address-Table Aging-Time

## Syntax

```
mac address-table aging-time <10-630>
```

## Parameter

<10-630> Specify aging time value of second.

## Default

Default aging out time is 300s.

## Mode

Global Configuration

## Usage

Use the MAC address-table aging-time Global configuration command to set the aging time of the address table. You can verify your settings by entering the show MAC address-table aging time Privileged EXEC command.

## Example

The following example shows how to configure the dynamic mac entry aging outtime.

```
Switch(config)#
```

```
mac address-table aging-time 100
```

Switch#

show mac address-table aging-time

Mac Address Table aging time: 100 sec

# MAC Address-Table Static

## Syntax

```
mac address-table static A:B:C:D:E:F vlan <1-4094> interfaces IF_PORTS  
no mac address-table static A:B:C:D:E:F vlan <1-4094>
```

## Parameter

A:B:C:D:E:F	Destination MAC address (unicast or multicast) to add to the address table. Packets with this destination address received in the specified VLAN are forwarded to the specified interface.
<1-4094>	Specify the VLAN for which the packet with the specified MAC address is received.
IF_PORTS	Interface to which the received packet is forwarded. Valid interfaces include physical ports and port channels.

## Default

No static addresses are configured.

## Mode

Global Configuration

## Usage

Use the `mac address-table static` global configuration command to add static addresses to the MAC address table. Use the `no` form of this command to remove static entries from the table. You can verify your settings by entering the `show mac address-table static` Privileged EXEC command.

## **Example**

The following example shows how to add static addresses to the MAC address table.

```
Switch(config)#
```

```
  mac address-table static 0:1:2:3:4:5 vlan 1 interfaces fa5
```

```
Switch(config)#
```

```
  mac address-table static 1:6:7:9:a:b vlan 100 interfaces fa1,fa5,gi1
```

```
Switch#
```

```
  show mac address-table static
```

```
VID | MAC Address | Type | Ports
```

```
1 | 00:01:02:03:04:05 | Static | fa5
```

```
100 | 01:06:07:09:0A:0B | Static | fa1,fa5,gi1
```

```
Total number of entries: 2
```

# MAC Address-Table Drop

## Syntax

```
mac address-table static A:B:C:D:E:F vlan <1-4094> drop
```

```
no mac address-table static A:B:C:D:E:F vlan <1-4094>
```

## Parameter

A:B:C:D:E:F	Unicast source or destination MAC address. Packets with this MAC address are dropped.
<1-4094>	Specify the VLAN for which the packet with the specified MAC address is received.

## Default

Unicast MAC address filtering is disabled. The switch does not drop traffic for specific source or destination MAC addresses.

## Mode

Global Configuration

## Usage

Use the `mac address-table static drop` global configuration command to enable unicast MAC address filtering and to configure the switch to drop traffic with a specific source or destination MAC address. Use the `no` form of this command to return to the default settings. You can verify your settings by entering the `show mac address-table static` Privileged EXEC command.

## Example

The following example shows how to add filter mac addresses to the MAC address table.

```
Switch(config)#
```

```
  mac address-table static a:b:c:d:e:f vlan 20 drop
```

```
Switch#
```

```
  show mac address-table static
```

```
VID | MAC Address | Type | Ports
```

```
1 | 00:01:02:03:04:05 | Static | fa5
```

```
100 | 01:06:07:09:0A:0B | Static | fa1,fa5,gi1
```

```
20 | 0A:0B:0C:0D:0E:0F | Filtering | All
```

```
Total number of entries: 3
```

# Show MAC Address-Table

## Syntax

```
show mac address-table [(static|dynamic)] [interfaces IF_PORTS] [vlan <1-4094>]  
show mac address-table A:B:C:D:E:F [vlan <1-4094>]
```

## Parameter

<b>static</b>	Displays only dynamic MAC address table entries.
<b>dynamic</b>	Displays only static MAC address table entries.
<b>IF_PORTS</b>	Displays entries for a specific interface ID. The interface ID can be one of the following types: Ethernet port or portchannel.
<b>&lt;1-4094&gt;</b>	Displays entries for a specific VLAN.
<b>A:B:C:D:E:F</b>	Displays entries for a specific MAC address.

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show mac address-table command in EXEC mode to view entries in the MAC address table.

## Example

The following example display all MAC address entries in mac address table

Switch#

```
show mac address-table
```

VID | MAC Address | Type | Ports

1 | DE:AD:BE:EF:01:02 | Management | CPU

1 | 00:00:E3:00:00:12 | Dynamic | fa11

1 | 00:01:02:03:04:05 | Static | fa5

1 | 00:14:78:3B:1E:E6 | Dynamic | gi1

100 | 01:06:07:09:0A:0B | Static | fa1,fa5,gi1

20 | 0A:0B:0C:0D:0E:0F | Static | All

Total number of entries: 6

The following example displays address table entries containing the specified MAC address.

switch#

```
show mac address-table 0:1:2:3:4:5
```

1 | 00:01:02:03:04:05 | Static | fa5

Total number of entries: 1

# Show MAC Address-Table Counters

## Syntax

```
show mac address-table counters
```

## Parameter

None

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show mac address-table counters command in EXEC mode to display the number of addresses present in a MAC address-table.

## Example

The following example shows how to display total the mac entry counters.

```
switch#
```

```
    show mac address-table counters
```

```
Total number of entries: 5
```

# Show MAC Address-Table Aging-Time

## Syntax

```
show mac address-table aging-time
```

## Parameter

None

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show mac address-table aging-time command in EXEC mode to display the aging time for dynamic mac entries.

## Example

The following example shows how to display the aging time of dynamic MAC address entries.

Switch#

```
show mac address-table aging-time
```

Mac Address Table aging time: 300 sec

# Chapter 15

## Mirror

# Mirror Session

## Syntax

```
mirror session <1-4> source interfaces IF_PORTS (both | rx | tx)
no mirror session <1-4> source interfaces IF_PORTS (both|rx|tx)
mirror session <1-4> source vlan <1-4094>
no mirror session <1-4> source vlan
mirror session <1-4> destination interface IF_NMLPORT [allow-ingress]
no mirror session <1-4> destination interface IF_NMLPORT
no mirror session (<1-4> | all)
```

## Parameter

<1-4>	Specify the mirror session to configure
<b>IF_PORTS</b>	Specify the source interface, Valid interfaces include physical ports and port channels.
<b>both,rx,tx</b>	Specify the traffic direction to mirror.
<1-4094>	Specify the mirrored VLAN ID
<b>IF_NMLPORT</b>	Specify the SPAN destination. A destination must be a physical port
<b>allow-ingress</b>	Enable ingress traffic forwarding.

## Default

No monitor sessions are configured.

## **Mode**

Global Configuration

## **Usage**

Use the monitor session global configuration command to start a new Switched Port Analyzer (SPAN) source or destination session. Use the no form of this command to remove the SPAN session or to remove source or destination interfaces or filters from the SPAN session. You can verify your settings by entering the show mirror Privileged EXEC command.

## **Example**

The following example shows how to create a local SPAN session 1 to monitor both sent and received traffic on the source port fa1.

```
Switch(config)#  
      mirror session 1 source interface fa2-5 both
```

```
Switch(config)#  
      mirror session 1 destination interface fa1
```

```
Switch(config)#  
      show mirror session 1  
  
Session 1 Configuration
```

Source RX Port : fa2-5

Source TX Port : fa2-5

Destination port : fa1

Ingress State: disabled

Switch(config)#

    mirror session 2 source vlan 100

Switch(config)#

    mirror session 2 destination interface gi1 allow-ingress

Switch(config)#

    show mirror session 2

Session 2 Configuration

Mirrored VLAN: 100

Destination port : gi1

Ingress State: enable

# Show Mirror

## Syntax

```
show mirror [session <1-4>]
```

## Parameter

<1-4> Specify the mirror session to display

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show mirror command in EXEC mode to display mirror session configuration.

## Example

This following example shows how to display mirror session configurations.

```
Switch(config)#
```

```
    show mirror
```

## **Session 1 Configuration**

Source RX Port : fa2-5

Source TX Port : fa2-5

Destination port : fa1

Ingress State: disabled

## **Session 2 Configuration**

Mirrored source : Not Config

Destination port : Not Config

## **Session 3 Configuration**

Mirrored source : Not Config

Destination port : Not Config

## **Session 4 Configuration**

Mirrored source : Not Config

Destination port : Not Config

# Chapter 16

## MLD Snooping

# IPV6 MLD Snooping

## Syntax

ipv6 mld snooping

no ipv6 mld snooping

show ipv6 mld snooping

## Parameter

None

## Default

no ipv6 mld snooping

## Mode

Global Configuration

## Usage

'no ipv6 mld snooping' will clear all ipv6 mld snooping dynamic groups and dynamic router ports, which makes the static ipv6 mld group invalid. They then will not learn the dynamic group and router port by a mld message. The configuration can use the 'show ipv6 mld snooping' command.

## **Example**

The following example specifies the set ipv6 mld snooping test.

```
Switch(config)#
```

```
    ipv6 mld snooping
```

```
Switch#
```

```
    show ipv6 mld snooping
```

## **MLD Snooping Status**

Snooping : Enabled

Report Suppression : Enabled

Operation Version : v1

Forward Method : mac

Unknown Multicast Action : Flood

```
Switch(config)#
```

```
    no ipv6 mld snooping
```

```
Switch#
```

```
    show ipv6 mld snooping
```

## **MLD Snooping Status**

Snooping : Disabled

Report Suppression : Enabled

Operation Version : v1

Forward Method : mac

Unknown Multicast Action : Flood

# IPv6 MLD Snooping Report-Suppression

## Syntax

ipv6 mld snooping report-suppression

no ipv6 mld snooping report-suppression

## Parameter

none

## Default

ipv6 mld snooping report-suppression

## Mode

Global Configuration

## Usage

'no ipv6 mld snooping report-suppression' will disable the mld v1 igmp report suppression function. So when you receive a report, it will forward to the vlan router ports. The configuration can use 'show ipv6 mld snooping'.

## **Example**

The following example specifies the disable ipv6 mld snooping reportsuppression test.

```
Switch(config)#
```

```
  no ipv6 mld snooping report-suppression
```

```
Switch#
```

```
  show ipv6 mld snooping
```

## **MLD Snooping Status**

Snooping : Enabled

Report Suppression : Disabled

Operation Version : v1

Forward Method : mac

Unknown Multicast Action : Flood

# IPv6 MLD Snooping Version

## Syntax

```
ipv6 mld snooping version (1|2)
```

## Parameter

(1|2) Ipv6 mld snooping running version 1 or 2

## Default

Ipv6 mld snooping version 2

## Mode

Global Configuration

## Usage

When the ipv6 mld snooping version is 1 ,the version 2 packet is not processed. The configuration can use 'show ipv6 mld snooping'.

## Example

The following example specifies the set ipv6 mld snooping version 2 test.

```
Switch(config)#
```

```
    ipv6 mld snooping version 2
```

Switch#

show ipv6 mld snooping

**MLD Snooping Status**

Snooping : Enabled

Report Suppression : Disabled

Operation Version : v2

Forward Method : mac

Unknown Multicast Action : Flood

# IPv6 MLD Snooping VLAN

## Syntax

```
ipv6 mld snooping vlan VLAN-LIST  
no ipv6 mld snooping vlan VLAN-LIST  
show ipv6 mld snooping vlan [VLAN-LIST]
```

## Parameter

VLAN-LIST specifies VLAN ID list to set

## Default

```
no ipv6 mld snooping vlan 1-4094
```

## Mode

Global Configuration

## Usage

'no ipv6 mld snooping vlan 1' will clear the vlan for all ipv6 mld snooping dynamic groups and dynamic router ports which makes the static ipv6 mld group invalid. The switch vlan ID is vlan 1. They then do not learn the dynamic group and router port by a mld message for vlan 1. The configuration can use 'show ipv6 mld snooping vlan 1'.

## Example

The following example specifies that set ipv6 mld snooping vlan test.

test must be enable ipv6 mld snooping firstly.

```
Switch(config)#
```

```
    ipv6 mld snooping
```

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1
```

```
Switch#
```

```
    show ipv6 mld snooping vlan 1
```

# IPv6 MLD Snooping VLAN Parameters

## Syntax

```
ipv6 mld snooping vlan <VLAN-LIST> last-member-query-count <1-7>
no ipv6 mld snooping vlan <VLAN-LIST> last-member-query-count
ipv6 mld snooping vlan <VLAN-LIST> last-member-query-interval <1-60>
no ipv6 mld snooping vlan <VLAN-LIST> last-member-query-interval
[no] ipv6 mld snooping vlan <VLAN-LIST> mrouter learn pim-dvmrp
[no] ipv6 mld snooping vlan <VLAN-LIST> fastleave
ipv6 mld snooping vlan <VLAN-LIST> query-interval <30-18000>
no ipv6 mld snooping vlan <VLAN-LIST> query-interval
ipv6 mld snooping vlan <VLAN-LIST> response-time <5-20>
no ipv6 mld snooping vlan <VLAN-LIST> response-time
ipv6 mld snooping vlan <VLAN-LIST> robustness-variable <1-7>
no ipv6 mld snooping vlan <VLAN-LIST> robustness-variable
```

## Parameter

<b>VLAN-LIST</b>	Specifies VLAN ID list to set
<b>last-member-query count &lt;1-7&gt;</b>	specifies last member query count to set. Default is 2
<b>last-member-query interval &lt;1-60&gt;</b>	specifies last member query interval to set. Default is 1
<b>query-interval &lt;30-18000&gt;</b>	specifies query interval to set. Default is 125
<b>response-time &lt;5-20&gt;</b>	specifies a response time to set. default is 10
<b>robustness-variable &lt;1-7&gt;</b>	specifies a robustness value to set, default is 2

## Default

no ipv6 mld snooping vlan 1-4094 last-member-query-count

no ipv6 mld snooping vlan 1-4094 last-member-query-interval

ipv6 mld snooping vlan 1-4094 mrouter learn pim-dvmrp

no ipv6 mld snooping vlan 1-4094 fastleave

no ipv6 mld snooping vlan 1-4094 query-interval

no ipv6 mld snooping vlan 1-4094 response-time

no ipv6 mld snooping vlan 1-4094 robustness-variable

## Mode

Global Configuration

## **Usage**

'no ipv6 mld snooping vlan 1 (last-member-query-count | last-member-queryinterval | query-interval | response-time | robustness-variable)' will set the vlan parameters to default. The cli setting will change the ipv6 mld vlan parameters admin settings. The configure can use 'show ipv6 mld snooping vlan 1'.

## **Example**

The following example specifies that set ipv6 mld snooping vlan parameters test.

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 fastleave
```

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 last-member-query-count 5
```

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 last-member-query-interval 3
```

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 query-interval 100
```

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 response-time 12
```

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 robustness-variable 4
```

Switch#

show ipv6 mld snooping vlan 1

# IPv6 MLD Snooping Static Port

## Syntax

```
[no] ipv6 mld snooping vlan <VLAN-LIST> static-port IF_PORTS
```

```
[no] ipv6 mld snooping vlan <VLAN-LIST> forbidden-port IF_PORTS
```

## Parameter

VLAN-LIST	specifies VLAN ID list to set
IF_PORTS	specifies a port list to set or remove

## Default

None static/forbidden ports

## Mode

Global Configuration

## Usage

'ipv6 mld snooping vlan 1 static-port fa1-2' will add the static port fa1-2 for vlan 1. The all known vlan 1 ipv6 group will add the static ports. 'ipv6 mld snooping vlan 1 forbidden-port fa3-4' will add the forbidden ports fa3-4 for vlan 1. The all known vlan 1 ipv6 group will remove the forbidden ports. The configuration can use 'show ipv6 mld snooping forward-all'.

## **Example**

The following example specifies the set ipv6 mld snooping static/forbidden port test.

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 static -port fa1-2
```

```
Switch(config)#
```

```
    ipv6 mld snooping vlan 1 forbidden -port fa3-4
```

```
Switch#
```

```
    show ipv6 mld snooping forward-all vlan 1
```

```
MLD Snooping VLAN : 1
```

```
MLD Snooping static port : fa1-2
```

```
MLD Snooping forbidden port : fa3-4
```

# IPv6 MLD Snooping VLAN Static Router Port

## Syntax

```
[no] ipv6 mld snooping vlan <VLAN-LIST> static-router-port IF_PORTS
```

```
[no] ipv6 mld snooping vlan <VLAN-LIST> forbidden-router-port IF_PORTS
```

## Parameter

VLAN-LIST	specifies VLAN ID list to set
IF_PORTS	specifies a port list to set or remove

## Default

None static/forbidden router ports

## Mode

Global Configuration

## Usage

'ipv6 mld snooping vlan 1 static-router-port fa1-2' will add the static router ports fa1-2 for vlan 1. 'ipv6 mld snooping vlan 1 forbidden-router-port fa2' will add the forbidden router to port fa2 for vlan 1. This will also remove fa2 from the static router port. therefore, the forbidden router port receive query will not forward. The configuration can use show ipv6 mld snooping router.

## **Example**

The following example specifies that set ipv6 mld snooping static/forbidden test.

Switch(config)#

```
  ipv6 mld snooping vlan 1 static-router-port fa1-2
```

Switch(config)#

```
  ipv6 mld snooping vlan 1 forbidden-router-port fa2
```

Switch#

```
  show ipv6 mld snooping router
```

### **Dynamic Router Table**

VID | Port | Expiry Time(Sec)

Total Entry 0

### **Static Router Table**

VID | Port Mask

1 | fa1

Total Entry 1

### **Forbidden Router Table**

VID | Port Mask

1 | fa2

Total Entry 1

# IPv6 MLD Snooping Static Group

## Syntax

```
[no] ipv6 mld snooping vlan <VLAN-LIST> static-group <ip-addr> interface IF_PORT
```

```
[no] ipv6 mld snooping vlan <VLAN-LIST> group <ip-addr>
```

```
show ipv6 mld snooping groups [(dynamic | static)]
```

```
clear ipv6 mld snooping groups [(dynamic | static)]
```

## Parameter

<b>VLAN-LIST</b>	specifies VLAN ID list to set
<b>ip-addr</b>	specifies multicast group ipv4 address
<b>IF_PORTS</b>	specifies a port list to set or remove

## Default

None

## Mode

Global Configuration

## **Usage**

'ipv6 mld snooping vlan 1 static-group ff12::1 interface fa1' will be added to the static group. The static group will not learn from other dynamic ports. If the dynamic group exists, then the static group will overlap with the dynamic group. If you remove the last member of static group, the static group will be deleted. In order for the static group to be valid , it must let the mld snooping vlan be enabled and the ipv6 mld snooping be enabled. The configuration can use 'show ipv6 mld snooping group [(dynamic | static)]' to display it. It can use 'no ipv6 mld snooping vlan 1 group ff12::1' to delete the static group. It can also clear ipv6 mld snooping groups to delete the static group.

## **Example**

The following example specifies that set ipv6 mld snooping static group test.

Switch(config)#

  ipv6 mld snooping vlan 1 static-group ff12::1 interface fa1

Switch(config)#

  ipv6 mld snooping vlan 1 static-group ff12::1 interface fa2

Switch#

  show ipv6 mld snooping groups

VLAN | Gourp IP Address | Type | Life(Sec) | Port

1 | ff12::1 | Static| -- | fa1-2

Total Number of Entry = 1

Switch#

  show ipv6 mld snooping groups

Switch#

show ipv6 mld snooping groups

VLAN | Gourp IP Address | Type | Life(Sec) | Port

Total Number of Entry = 0

# IPv6 MLD Profile

## Syntax

```
ipv6 mld profile <1-128>
```

```
profile range ipv6 <ipv6-addr> [ipv6-addr] action (permit | deny)
```

```
show ipv6 mld profile [<1-128>]
```

## Parameter

<1-128>	specifies profile ID
<ipv6-addr>	Start ipv6 multicast address
[ipv6-addr]	End ipv6 multicast address
(permit   deny)	Permit: allow Multicast address range ipv6 address learning deny: do not allow Multicast address range ipv6 address learning

## Default

None

## Mode

```
ipv6 mld profile <1-128>
```

Global Configuration

```
profile range ipv6 <ipv6-addr> [ipv6-addr] action (permit | deny)
```

```
mld profile config mode
```

## **Usage**

Use 'ipv6 mld profile 1' entry to the mld profile config mode. Use 'profile range ipv6 ff12::1 ff12::8 action permit' to configure the profile entry. The profile entry is used by the port filter. The configuration can use 'show ipv6 mld profile [<1-128>]' to display

## **Example**

The following example specifies that set ipv6 mld profile test.

```
Switch(config)#
```

```
    ipv6 mld profile 1
```

```
Switch(config-mld-profile)#
```

```
    profile range ipv6 ff13::1 ff13::10 action
```

```
    permit
```

```
Switch(config-mld-profile)#
```

```
    show ipv6 mld profile
```

```
IPv6 mld profile index: 1
```

```
IPv6 mld profile action: permit
```

```
Range low ip: ff13::1
```

```
Range high ip: ff13::10
```

```
Switch(config-mld-profile)#
```

```
    exit
```

```
Switch(config)#  
    ipv6 mld profile 5  
Switch(config-mld-profile)#  
    profile range ipv6 ff12::1 ff12::12 action deny  
Switch(config-mld-profile)#  
    show ipv6 mld profile  
IPv6 mld profile index: 5  
IPv6 mld profile action: deny  
Range low ip: ff12::1  
Range high ip: ff12::12  
Switch(config-mld-profile)#  
    exit  
Switch(config)#  
    exit  
Switch#  
    show ipv6 mld profile  
IPv6 mld profile index: 1  
IPv6 mld profile action: permit
```

Range low ip: ff13::1

Range high ip: ff13::10

IPv6 mld profile index: 5

IPv6 mld profile action: deny

Range low ip: ff12::1

Range high ip: ff12::12

# IPv6 MLD Filter

## Syntax

ipv6 mld filter <1-128>

[no] ipv6 mld filter

Show ipv6 mld filter [interfaces IF\_PORTS]

## Parameter

<1-128>	specifies profile ID
[interfaces	Specifies interfaces to display
IF_PORTS]	

## Default

None

## Mode

Interface mode

## Usage

The following example specifies that set ipv6 mld filter test. The configure must create ipv6 mld profile firstly.

Switch(config)#

  ipv6 mld profile 1

```
Switch(config-igmp-profile)#
  profile range ipv6 ff13::1 ff13::10 action
    permit
Switch(config-igmp-profile)#
  exit
Switch(config)#
  interface fa1
Switch(config-if)#
  ipv6 mld filter 1
Switch(config-if)#
  exit
Switch(config)#
  exit
Switch#
  show ipv6 mld filter
Port ID | Profile ID
fa1 : 1
fa2 : None
```

fa3 : None

fa4 : None

fa5 : None

# IPv6 MLD Max-Groups

## Syntax

ipv6 mld max-groups <0-512>

no ipv6 mld max-groups

ipv6 mld max-groups action (deny | replace)

Show ipv6 mld max-group [interfaces IF\_PORTS]

Show ipv6 mld max-group action [interfaces IF\_PORTS]

## Parameter

<1-128>	specifies profile ID
(deny   replace)	Deny: current port ipv4 group arrived max-groups, don't add group. Replace: current port ipv6 group arrived max-groups, remove port from rand group, and add port to group.

## Default

no ipv6 mld max-groups

ipv6 mld max-groups action deny

## Mode

Interface mode

## **Usage**

use 'ipv6 mld max-groups 10' to limit port learning. The max group number is 10. When the port has learned more than 10 groups, then the extra groups will be removed from the port form group. static groups are excluded. The configuration can use 'show ipv6 mld max-group & show ipv6 mld maxgroup action ' to display.

## **Example**

The following example specifies that set ipv6 mld max-groups and action is replace test.

```
Switch(config)#  
    interface fa1  
Switch(config-if)#  
    ipv6 mld max-groups 10  
Switch(config-if)#  
    ipv6 mld max-groups action replace  
Switch(config-if)#  
    exit  
Switch(config)#  
    exit  
Switch#  
    show ipv6 mld max-group
```

Port ID | Max Group

fa1 : 10

fa2 : 1024

fa3 : 1024

fa4 : 1024

fa5 : 1024

Switch#

show ipv6 mld max-group action

Port ID | Max-groups Action

fa1 : replace

fa2 : deny

fa3 : deny

fa4 : deny

fa5 : deny

# Clear IPv6 MLD Snooping Groups

## Syntax

```
clear ipv6 mld snooping groups [(dynamic | static)]
```

## Parameter

<b>none</b>	Clear ipv6 mld groups include dynamic and static
<b>(dynamic   static)</b>	ipv6 mld group type is dynamic or static

## Default

Clear all ipv6 mld groups

## Mode

privileged mode

## Usage

This command will clear the ipv6 mld groups for dynamic or static or of all types. The configuration can use 'show ipv6 mld snooping groups' to check.

## Example

The following example specifies that clear ipv6 mld snooping groups test.

Switch#

```
clear ipv6 mld snooping groups static
```

Switch#

show ipv6 mld snooping groups

Switch#

clear ipv6 mld snooping groups

Switch#

show ipv6 mld snooping groups

# Clear IPv6 MLD Snooping Statistics

## Syntax

```
clear ipv6 mld snooping statistics
```

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will clear the mld statistics. The configuration can use show ipv6 mld snooping.

## Example

The following example specifies the clear ipv6 mld snooping statistics test.

Switch#

```
lear ipv6 mld snooping statistics
```

Switch#

```
show ipv6 mld snooping
```

# Show IPv6 MLD Snooping Counters

## Syntax

```
show ipv6 mld snooping groups counters
```

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the ipv6 mld group counter, which includes the static group.

## Example

The following example specifies the display ipv6 mld snooping group counter test.

Switch#

```
show ipv6 mld snooping counters
```

# Show IPv6 MLD Snooping Groups

## Syntax

```
show ipv6 mld snooping groups [(dynamic | static)]
```

## Parameter

<b>none</b>	Show ipv6 mld groups include dynamic and static
<b>(dynamic   static)</b>	Display ipv6 mld group type is dynamic or static

## Default

display all ipv6 mld groups

## Mode

privileged mode

## Usage

This command will display the ipv6 mld groups for dynamic or static or all of type.

## Example

The following example specifies that show ipv6 mld snooping groups test.

Switch#

```
show ipv6 mld snooping groups
```

Switch#

show ipv6 mld snooping groups dynamic

Switch#

show ipv6 mld snooping groups static

# Show IPv6 MLD Snooping Router

## Syntax

```
show ipv6 mld snooping router [(dynamic | forbidden |static )]
```

## Parameter

<b>none</b>	Show ipv6 mld router include dynamic and static and forbidden
<b>(dynamic   static)</b>	Display ipv6 mld router info for different type

## Default

display all router info

## Mode

privileged mode

## Usage

This command will display the ipv6 mld router info.

## Example

The following example specifies that show ipv6 mld snooping router test.

Switch#

```
show ipv6 mld snooping router
```

Switch# show ipv6 mld snooping router static

Switch# show ipv6 mld snooping router forbidden

# Show IPv6 MLD Snooping

## Syntax

show ipv6 mld snooping

## Parameter

none Show ipv6 mld snooping global info.

## Default

None

## Mode

Privileged mode

## Usage

This command will display the ipv6 mld snooping global info.

## Example

The following example specifies that show ipv6 mld snooping test.

Switch#

```
show ipv6 mld snooping
```

# Show IPv6 MLD Snooping VLAN

## Syntax

```
show ipv6 mld snooping vlan [VLAN-LIST]
```

## Parameter

<b>none</b>	Show all ipv6 mld snooping vlan info
<b>[VLAN-LIST]</b>	Show specifies vlan ipv6 mld snooping info

## Default

Show all ipv6 mld snooping vlan info.

## Mode

Privileged mode

## Usage

This command will display the ipv6 mld snooping vlan info.

## Example

The following example specifies the show ipv6 mld snooping vlan test.

Switch#

```
show ipv6 mld snooping vlan
```

MLD Snooping is globaly disabled

MLD Snooping VLAN 1 admin : disabled

MLD Snooping oper mode : disabled

MLD Snooping robustness: admin 2 oper 2

MLD Snooping query interval: admin 125 sec oper 125 sec

MLD Snooping query max response : admin 10 sec oper 10 sec

MLD Snooping last member query counter: admin 2 oper 2

MLD Snooping last member query interval: admin 1 sec oper 1 sec

MLD Snooping last immediate leave: disabled

MLD Snooping mrouter port learn by pim-dvmrp: enabled

# Show IPv6 MLD Snooping Forward-All

## Syntax

```
show ipv6 mld snooping forward-all [vlan VLAN-LIST]
```

## Parameter

<b>none</b>	Show all ipv6 mld snooping vlan forward-all info
<b>[vlan VLAN-LIST]</b>	Show specifies vlan of ipv6 mld forward info.

## Default

Show all vlan ipv6 mld forward all info.

## Mode

Privileged mode

## Usage

This command will display ipv6 mld snooping forward all info.

## Example

The following example specifies that show ipv6 mld snooping forward-all test.

Switch#

show ipv6 mld snooping forward-all

MLD Snooping VLAN : 1

MLD Snooping static port : None

MLD Snooping forbidden port : None

# Show IPv6 MLD Profile

## Syntax

```
show ipv6 mld profile [<1-128>]
```

## Parameter

<b>none</b>	Show all ipv6 mld snooping profile info.
<b>[&lt;1-128&gt;]</b>	Show specifies index profile info.

## Default

Show all ipv6 mld profile info.

## Mode

Privileged mode

## Usage

This command will display the ipv6 mld profile info.

## Example

The following example specifies the show ipv6 mld profile test.

Switch#

```
show ipv6 mld profile
```

IPv6 mld profile index: 1

Range high ip: ff13::10

# Show IPv6 MLD Port Filter

## Syntax

```
show ipv6 mld filter [interfaces IF_PORTS]
```

## Parameter

<b>none</b>	Show all port filter
<b>[interfaces IF_PORTS]</b>	Show specifies ports filter

## Default

Show all ports ipv6 mld filter.

## Mode

Privileged mode

## Usage

This command will display ipv6 mld port filter info.

## Example

The following example specifies the show ipv6 mld filter test.

Switch#

```
show ipv6 mld filter
```

Port ID | Profile ID

fa1 : 1

fa2 : None

fa3 : None

fa4 : None

fa5 : None

# Show IPv6 MLD Max-Group

## Syntax

```
show ipv6 mld max-group [interfaces IF_PORTS]
```

## Parameter

<b>none</b>	Show all port max-group
<b>[interfaces IF_PORTS]</b>	Show specifies ports max-group

## Default

Show all ports ipv6 mld max-group.

## Mode

Privileged mode

## Usage

This command will display the ipv6 mld port max-group.

## Example

The following example specifies the show ipv6 mld max-group test.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#  
    ipv6 mld max-groups 50  
Switch(config-if)#  
    exit  
Switch(config)#  
    exit  
Switch#  
    show ipv6 mld max-group  
Port ID | Max Group  
fa1 : 50  
fa2 : 1024  
fa3 : 1024  
fa4 : 1024  
fa5 : 1024
```

# Show IPv6 MLD Port Max-Group Action

## Syntax

```
show ipv6 mld max-group action [interfaces IF_PORTS]
```

## Parameter

<b>none</b>	Show all port max-group action
<b>[interfaces IF_PORTS]</b>	Show specifies ports max-group action

## Default

Show all ports ipv6 mld max-group action.

## Mode

Privileged mode

## Usage

This command will display the ipv6 mld port max-group action.

## Example

The following example specifies that show ipv6 mld max-group action test.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#  
    ipv6 mld max-groups action replace
```

```
Switch(config-if)#  
    exit
```

```
Switch(config)#  
    exit
```

```
Switch#
```

```
    show ipv6 mld max-group action
```

```
Port ID | Max-groups Action
```

```
fa1 : replace
```

```
fa2 : deny
```

```
fa3 : deny
```

```
fa4 : deny
```

```
fa5 : deny
```

# Chapter 17

# Port Security

# Port Security

## Syntax

port-security

no port-security

## Parameter

None

## Default

Default is disabled.

## Mode

Global Configuration

## Usage

The “port-security” command enables the port security functionality on the port. Use the no form of this command to disable it.

## Example

The following example shows how to enable port security on port 1 and set the learning limit number to 10.

```
switch(config)#
```

```
    interface fa1
```

```
switch(config-if)#  
    port-security address-limit 10 action discard  
switch(config-if)#  
    port-security  
switch(config)#  
    show port-security interfaces fa1  
Port | Mode | Security | CurrentAddr | Action  
fa1 | Dynamic | Enabled ( 10 ) | 0 | Discard
```

# Port-Security Address-Limit

## Syntax

```
port-security address-limit <1-256> action (forward|discard|shutdown)
```

```
no dot1x port-control address-limit.
```

## Parameter

<1-256>	The learning-limit number. It specifies how many MAC addresses this port can learn.
<b>forward</b>	Forward this packet whose SMAC is new to system and exceed the learning-limit number.
<b>discard</b>	Discard this packet whose SMAC is new to system and exceed the learning-limit number.
<b>shutdown</b>	Shutdown this port when receives a packet whose SMAC is new to system and exceed the learning limit number.

## Default

The address-limit default is 10 and the action is “discard”.

## Mode

Interface Configuration

## Usage

Use the “port-security address-limit” command to set the learning-limit number and the violation action. Use the no form of this command to restore the default settings.

## Example

The following example shows how to enable port security on port 1 and set the learning limit number to 10.

```
switch(config)#  
    interface fa1  
switch(config-if)#  
    port-security address-limit 10 action discard  
switch(config-if)#  
    port-security  
switch(config)#  
    show port-security interfaces fa1  
Port | Mode | Security | CurrentAddr | Action  
fa1 | Dynamic | Enabled ( 10) | 0 | Discard
```

# Show Port-Security Interface

## Syntax

```
show port-security interface IF_PORTS
```

## Parameter

IF\_PORTS Select port to show port-security configurations.

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “show port-security interfaces” command to show port-security information of the specified port.

## Example

This example shows how to show port-security configurations on interface fa1.

Switch#

```
show port-security interfaces fa1
```

Port | Mode | Security | CurrentAddr | Action

fa1 | Dynamic | Enabled ( 10 ) | 0 | Discard

# **Chapter 18**

# **Port Error Disable**

# Errdisable Recovery Cause

## Syntax

errdisable recovery cause (all | acl | broadcast-flood | bpduguard | psecure-violation | unicast-flood | unknown-multicast-flood | selfloop)

no errdisable recovery cause (all | acl | broadcast-flood | bpduguard | psecure-violation | unicast-flood | unknown-multicast-flood | selfloop)

## Parameter

<b>all</b>	Enable/Disable to auto recovery for port error disabled by all reasons.
<b>acl</b>	Enable/Disable to auto recovery for port error disabled by ACL shutdown port reason.
<b>broadcast-flood</b>	Enable/Disable to auto recovery for port error disabled by storm control broadcast flood reason.
<b>bpduguard</b>	Enable/Disable to auto recovery for port error disabled by STP BPDU Guard reason.
<b>psecure-violation</b>	Enable/Disable to auto recovery for port error disabled by violate port security rule reason.
<b>unicast-flood</b>	Enable/Disable to auto recovery for port error disabled by storm control unicast flood reason.
<b>unknown-multicast-flood</b>	Enable/Disable to auto recovery for port error disabled by storm control unknown multicast flood reason.
<b>selfloop</b>	Enable/Disable to auto recovery for port error disabled by self loop detect reason.

## Default

Default auto recover state for all reasons are disabled.

## **Mode**

Global Configuration

## **Usage**

The port will be disabled by invalid actions detected by various protocols. The administrator can enable these error disabled ports manually by the “no shutdown” command in Interface Mode, or just turn on the auto recovery mechanism by this command to auto enable the error disabled port after an auto recovery interval.

## **Example**

This example shows how to enable auto recovery with reason bpduguard and broadcast-flood.

```
Switch(config)#
```

```
    errdisable recovery cause bpduguard
```

```
Switch(config)#
```

```
    errdisable recovery cause broadcastflood
```

This example shows how to show current auto recovery state of each reason and port error disabled status.

```
Switch#
```

```
    show errdisable recovery
```

ErrDisable Reason | Timer Status

bpduguard | enabled

selfloop | disabled

broadcast-flood | enabled

unknown-multicast-flood | disabled

unicast-flood | disabled

acl | disabled

psecure-violation | disabled

Timer Interval : 300 seconds

Interfaces that will be enabled at the next timeout:

Port | Error Disable Reason | Time Left

# **Errdisable Recovery Interval**

## **Syntax**

```
errdisable recovery interval <0-86400>
```

## **Parameter**

<0-86400> Specify the auto recovery interval with unit second.

## **Default**

Default auto recovery interval is 300 second.

## **Mode**

Global Configuration

## **Usage**

The port will be disabled by invalid actions detected by various protocols. The auto recovery mechanism will enable these error disabled ports after awhile. This command configures how long the port will be enabled after an error disables it.

## **Example**

This example shows how to configure the auto recovery interval to 600 seconds.

```
Switch(config)#
```

```
errdisable recovery interval 600
```

This example shows how to show current auto recovery interval

Switch#

show errdisable recovery

ErrDisable Reason | Timer Status

bpduguard | enabled

selfloop | disabled

broadcast-flood | enabled

unknown-multicast-flood | disabled

unicast-flood | disabled

acl | disabled

psecure-violation | disabled

Timer Interval : 600 seconds

Interfaces that will be enabled at the next timeout:

Port | Error Disable Reason | Time Left

# Show Errdisable Recovery

## Syntax

```
show errdisable recovery
```

## Parameter

None

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use the “show errdisable recovery” command to show each error disable state, error disable recovery interval, and current error disabled port status.

## Example

This example shows how to show current auto recovery interval

Switch#

```
show errdisable recovery
```

ErrDisable Reason | Timer Status

bpduguard | enabled

selfloop | disabled

broadcast-flood | enabled

unknown-multicast-flood | disabled

unicast-flood | disabled

acl | disabled

psecure-violation | disabled

Timer Interval : 600 seconds

Interfaces that will be enabled at the next timeout:

Port | Error Disable Reason | Time Left

# Chapter 19

## Port

# Description

## Syntax

description WORD<1-32>

no description

## Parameter

WORD<1-32> Specify port description string.

## Default

Default port description is empty.

## Mode

Interface Configuration

## Usage

Use the “description” command to give the port a name to identify it easily. If the description includes a space character, please use double quotes. Use the no form to restore descriptions to the empty string.

## Example

This example shows how to modify port descriptions.

Switch(config)#

  interface fa1

```
Switch(config-if)#
```

```
    description userport
```

```
Switch(config-if)#
```

```
    exit
```

```
Switch(config)#
```

```
    interface fa2
```

```
Switch(config-if)#
```

```
    description "uplink port"
```

This example shows how to show current port description on interface fa1 and fa2

```
Switch#
```

```
    show interfaces fa1-2 status
```

Port	Name	Status	Vlan	Duplex
------	------	--------	------	--------

Speed	Type
-------	------

fa1	userport notconnect 1 auto
-----	----------------------------

auto	Copper
------	--------

fa2	uplink port notconnect 1 auto
-----	-------------------------------

auto	Copper
------	--------

# Speed

## Syntax

speed (10 | 100 | 1000)

speed auto [(10 | 100 | 1000 | 10/100)]

## Parameter

10	Specify port speed to force 10Mbits/s or auto with 10Mbits/s ability.
100	Specify port speed to force 100Mbits/s or auto with 100Mbits/s ability.
1000	Specify port speed to force 1000Mbits/s or auto with 1000Mbits/s ability.
10/100	Specify port speed to auto with 10Mbits/s and 100Mbits/s

## Default

Default port speed is auto with all available abilities.

## Mode

Interface Configuration

## Usage

Use the “speed” command to change port speed configuration. The speed is only able to configure to the physical maximum speed. For example, in fast Ethernet port, speed 1000 is not available.

## Example

This example shows how to modify port speed configuration.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    speed 100
```

```
Switch(config-if)#
```

```
    exit
```

```
Switch(config)#
```

```
    interface fa2
```

```
Switch(config-if)#
```

```
    speed auto 10/100
```

This example shows how to show current speed configuration

```
Switch#
```

```
    show running-config interfaces fa1-2
```

```
interface fa1
```

```
    speed 100
```

```
interface fa2
```

```
speed auto 10/100
```

This example shows how to show current interface link speed

Switch#

```
show interfaces fa1-2 status
```

Port Name Status Vlan Duplex

Speed Type

```
fa1 connected 1 a-full
```

```
a-100M Copper
```

```
fa2 connected 1 a-full
```

```
a-100M Copper
```

# Duplex

## Syntax

duplex (auto | full | half)

## Parameter

auto Specify port duplex to auto negotiation.

full Specify port duplex to force full duplex.

half Specify port duplex to force half duplex.

## Default

Default port duplex is auto.

## Mode

Interface Configuration

## Usage

Use "duplex" command to change port duplex configuration.

## Example

This example shows how to modify port duplex configuration.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    duplex full
```

```
Switch(config-if)#
```

```
    exit
```

```
Switch(config)#
```

```
    interface fa2
```

```
Switch(config-if)#
```

```
    duplex half
```

This example shows how to show current speed configuration

```
Switch#
```

```
    show running-config interfaces fa1-2
```

```
interface fa1
```

```
    duplex full
```

```
interface fa2
```

duplex half

This example shows how to show current interface link speed

Switch#

  show interfaces fa1-2 status

Port Name Status Vlan Duplex

Speed Type

  fa1 connected 1 full

    a-100M Copper

  fa2 connected 1 half

    a-100M Copper

# Flow-Control

## Syntax

flow-control (off | on)

no flow-control

## Parameter

Off	Disable port flow control.
On	Enable port flow control.

## Default

Default port flow control is off.

## Mode

Interface Configuration

## Usage

Use the “flow-control” command to change port flow control configurations. Use no form to restore flow control to default (off) configurations.

## Example

This example shows how to modify the port duplex configuration.

Switch(config)#

interface fa1

```
Switch(config-if)#
```

```
    flow-control on
```

This example shows how to show current flow control configuration

```
Switch#
```

```
    show interfaces fa1
```

Hardware is Fast Ethernet

Full-duplex, Auto-speed, media type is Copper

flow-control is on

0 packets input, 0 bytes, 0 throttles

Received 0 broadcasts (0 multicasts)

0 runts, 0 giants, 0 throttles

0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored

0 multicast, 0 pause input

0 input packets with dribble condition detected

379 packets output, 31981 bytes, 0 underrun

0 output errors, 0 collisions, 0 interface resets

0 babbles, 0 late collision, 0 deferred

0 PAUSE output

# **Shutdown**

## **Syntax**

shutdown

no shutdown

## **Parameter**

None

## **Default**

Default port admin state is no shutdown.

## **Mode**

Interface Configuration

## **Usage**

Use the “shutdown” command to disable the port and use “no shutdown” to enable the port. If port is disabled for some reason, use the “no shutdown” command to recover the port manually.

## **Example**

This example shows how to modify port duplex configuration.

Switch(config)#

  interface fa1

```
Switch(config-if)#
```

```
    shutdown
```

This example shows how to show current admin state configuration

```
Switch#
```

```
    show running-config interfaces fa1
```

```
interface fa1
```

```
    shutdown
```

This example shows how to show current link status

```
Port Name Status Vlan Duplex
```

```
Speed Type
```

```
fa1 disable 1 full
```

```
auto Copper
```

# Jumbo-Frame

## Syntax

```
jumbo-frame <64-9216>
```

## Parameter

<64-9216> Specify the maximum frame size.

## Default

Default maximum frame size is 1522.

## Mode

Interface Configuration

## Usage

Use the “jumbo-frame” command to modify the maximum frame size. The only way to show this configuration is by using the “show running-config” command.

## Example

This example shows how to modify maximum the frame size on fa1 to 9216 bytes.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#  
    jumbo-frame 9216
```

This example shows how to show current jumbo-frame size

```
Switch#  
    show running-config interface fa1  
interface fa1  
jumbo-frame 9216
```

# **Protected**

## **Syntax**

protected

no protected

## **Parameter**

<64-9216> Specify the maximum frame size.

## **Default**

Default protected state is no protected.

## **Mode**

Interface Configuration

## **Usage**

Use the “protected” command to make the port protected. A protected port is only allowed to communicate with an unprotected port. In other words, a protected port is not allowed to communicate with another protected port. Use the no form to make a port unprotected.

## **Example**

This example shows how to configure port fa1 and fa2 to be protected port.

```
Switch(config)#
```

```
    interface range fa1-2
```

```
Switch(config-if-range)#
```

```
    protected
```

This example shows how to show current protected port state.

```
Switch#
```

```
    show interfaces fa1-2 protected
```

```
Port | Protected State
```

```
fa1 |enabled
```

```
fa2 |enabled
```

# **EEE**

## **Syntax**

eee

no eee

## **Parameter**

None

## **Default**

Default eee state is disabled.

## **Mode**

Interface Configuration

## **Usage**

Use the “eee” command to make a port enabled for the energy efficient Ethernet feature and use “no eee” command to disable it. The only way to show this configuration is using “show running-config” command.

## **Example**

This example shows how to configure port fa1 and fa2 to be protected port.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    eee
```

This example shows how to show current jumbo-frmae size

```
Switch#
```

```
    show running-config interface fa1
```

```
interface fa1
```

```
    eee
```

# Clear Interface

## Syntax

```
clear interfaces IF_PORTS counters
```

## Parameter

IF\_PORTS Specifiy port to clear counters.

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use the “clear interface” command to clear counters on specific ports.

## Example

This example shows how to clear counters on port fa1.

```
Switch(config)#
```

```
    clear interfaces fa1 counters
```

This example shows how to show current counters

Switch#

```
show interfaces fa1
```

Hardware is Fast Ethernet

Auto-duplex, Auto-speed, media type is Copper

flow-control is off

0 packets input, 0 bytes, 0 throttles

Received 0 broadcasts (0 multicasts)

0 runts, 0 giants, 0 throttles

0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored

0 multicast, 0 pause input

0 input packets with dribble condition detected

0 packets output, 0 bytes, 0 underrun

0 output errors, 0 collisions, 0 interface resets

0 babbles, 0 late collision, 0 deferred

0 PAUSE output

# Show Interface

## Syntax

show interfaces IF\_PORTS

show interfaces IF\_PORTS status

show interfaces IF\_PORTS protected

## Parameter

IF\_PORTS Specifiy port to show.

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use "show interface" command to show port counters, parameters and status.

## Example

This example shows how to show current counters

Switch#

```
show interfaces fa1
```

Hardware is Fast Ethernet

Auto-duplex, Auto-speed, media type is Copper

flow-control is off

0 packets input, 0 bytes, 0 throttles

Received 0 broadcasts (0 multicasts)

0 runts, 0 giants, 0 throttles

0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored

0 multicast, 0 pause input

0 input packets with dribble condition detected

0 packets output, 0 bytes, 0 underrun

0 output errors, 0 collisions, 0 interface resets

0 babbles, 0 late collision, 0 deferred

0 PAUSE output

This example shows how to show current protected port state.

Switch#

```
show interfaces fa1-2 protected
```

fa1 |enabled

fa2 |enabled

This example shows how to show current port status

Switch#

show interfaces fa1-2 status

Port Name Status Vlan Duplex

Speed Type

fa1 connected 1 full

a-100M Copper

# Chapter 20

## QoS

# QoS

## Syntax

qos [(advanced | basic)]

no qos

## Parameter

Advanced	Specify the device to qos advanced mode
Basic	Specify the device to qos basic mode

## Default

Default qos mode is disabled.

## Mode

Global Configuration

## Usage

QoS has the following 3 modes; use this command to switch between them.

**Disable:** QoS function is disabled and all packets will go through lowest priority queue. It means first in will be first out, no QoS is guarantee.

**Basic:** According to basic trust type to assign queue for packets, and packets with higher priority are able to send first.

**Advanced:** Use ACL to classify packets to achieve flow-based QoS and do different kind of actions for different type of packets.

## Example

This example shows how to change qos to basic mode.

```
Switch(config)#
```

```
    qos basic
```

```
Switch(config)#
```

```
    qos
```

This example shows how to change qos to advanced mode.

```
Switch(config)#
```

```
    qos advanced
```

This example shows how to change qos to disabled mode.

```
Switch(config)#
```

```
    no qos
```

This example shows how to check current qos mode.

```
Switch#
```

```
    show qos
```

QoS Mode: basic

Basic trust: cos

# QoS Trust (1)

## Syntax

```
qos trust (cos | cos-dscp | dscp | precedence)
```

## Parameter

<b>cos</b>	Specify the device to trust CoS
<b>cos-dscp</b>	Specify the device to trust DSCP for IP packets, and trust CoS for non-IP packets.
<b>dscp</b>	Specify the device to trust DSCP
<b>precedence</b>	Specify the device to trust IP Precedence

## Default

Default qos basic mode trust type is cos

## Mode

Global Configuration

## Usage

In QoS basic mode, there are 4 trust types for device to judge the appropriate queue of the packets. This command is able to switch between these trust types.

**CoS:** IEEE 802.1p defined 3bits priority value in vlan tag. Trust this value in packets and assign queue according to cos-queue map.

**DSCP:** IETF RFC2474 defined 6bits priority value in IP packet (highest 6bits in ToS field). Trust this value in packets and assign queue according to dscp-queue map.

**IP Precedence:** The highest 3bits priority value in IP packet ToS field. Trust this value in packets and assign queue according to precedence-queue map.

**CoS-DSCP:** Trust DSCP for IP packets and assign queue according to dscp-queue map. Trust CoS for non-IP packets and assign queue according to cos-queue map.

## Example

This example shows how to change qos basic mode trust types.

```
Switch(config)#
```

```
    qos trust cos
```

```
Switch(config)#
```

```
    qos trust cos-dscp
```

```
Switch(config)#
```

```
    qos trust dscp
```

```
Switch(config)#
```

```
    qos trust precedence
```

This example shows how to check current qos trust type.

```
Switch#
```

```
    show qos
```

QoS Mode: basic

Basic trust: cos

# QoS Map

## Syntax

qos map (cos-queue | dscp-queue | precedence-queue) SEQUENCE to <1-8>

qos map (queue-cos | queue-precedence) SEQUENCE to <0-7>

qos map queue-dscp SEQUENCE to <0-63>

## Parameter

<b>cos-queue</b>	Configure or show CoS to queue map
<b>dscp-queue</b>	Configure or show DSCP to queue map
<b>precedence-queue</b>	Configure or show IP Precedence to queue map.
<b>queue-cos</b>	Configure or show queue to CoS map
<b>queue-dscp</b>	Configure or show queue to DSCP map
<b>queue-precedence</b>	Configure or show queue to IP Precedence map
<b>SEQUENCE</b>	Specify the cos, dscp, precedence or queue with one or multiple values.
<b>&lt;1-8&gt;</b>	Specify the queue id
<b>&lt;0-7&gt;</b>	Specify the cos or precedence values
<b>&lt;0-63&gt;</b>	Specify the dscp values

## **Default**

The default values of cos-queue are showing in the following table.

<b>CoS</b>	<b>Queue ID</b>
0	2
1	1
2	3
3	4
4	5
5	6
6	7
7	8

The default values of dscp-queue are showing in the following table.

<b>DSCP</b>	<b>Queue ID</b>
0~7	2
8~15	1
16~23	3
24~31	4
32~39	5
40~47	6
48~55	7
56~63	8

The default values of ip precedence are showing in the following table.

IP Precedence	Queue ID
0	1
1	2
2	3
3	4
4	5
5	6
6	7
7	8

The default values of queue-cos are showing in the following table.

Queue ID	CoS
1	1
3	2
4	3
5	4
6	5
7	6
8	7

The default values of queue-dscp are showing in the following table.

Queue ID	DSCP
1	0
2	8
3	16
4	24
5	32
6	40
7	48
8	56

The default values of queue-precedence are showing in the following table.

Queue ID	DSCP
1	0
2	1
3	2
4	3
5	4
6	5
7	6
8	7

## Mode

Global Configuration

## Usage

According to different trust types, packets will be assigned to different queues based on the specific qos map. For example, if the trust type is trust cos, the device will get the cos value in a packet and reference the cos-queue mapping to assign the correct queue. The queue to cos, dscp or precedence maps are used by a remarking feature. If the port remarking feature is enabled, the remarking function will reference these 3 tables to remark packets.

## Example

This example shows how to map cos 6 and 7 to queue 1.

```
Switch(config)# qos map cos-queue 6 7 to 1
```

```
Switch(config)# show qos map cos-queue
```

CoS to Queue mappings

COS 0 1 2 3 4 5 6 7

Queue 2 1 3 4 5 6 1 1

This example shows how to map queue 4 and 5 to cos 7.

```
Switch(config)#
```

```
    qos map queue-cos 4 5 to 7
```

```
Switch(config)#
```

```
    show qos map queue-cos
```

Queue to CoS mappings

Queue 1 2 3 4 5 6 7 8

Queue to CoS mappings

Queue 1 2 3 4 5 6 7 8

CoS 1 0 2 7 7 5 6 7

# QoS Queue

## Syntax

qos queue strict-priority-num <0-8>

qos queue weight SEQUENCE

show qos queueing

## Parameter

<b>strict-prioritynum &lt;0-8&gt;</b>	Specify the strict priority queue number weight
<b>SEQUENCE</b>	Specify the non-strict priority queue weight value. The valid queue weight value is from 1 to 127.

## Default

Default strict priority queue number is 8, it means all queues are strict priority queue.

The default queue weight for each queue is shown in following table.

<b>Queue ID</b>	<b>Queue Weight</b>
1	1
2	2
3	3
4	4
5	5
6	9
7	13
8	15

## Mode

Global Configuration

## Usage

The device support total 8 queues for QoS queueing. It is able to set the queue to be strict priority queue or weighted queue to prevent starvation. The queue with higher id value has higher priority. First, you need to decide how many strict priority queue you need. The strict priority queue will always occupy the higher priority queue. For example, if you specify the strict priority number to be 2, then the queue 7 and 8 will be the strict priority queues and the others are weighted queues. After you setup the number of strict priority queue, you need to setup the weight for the weighted queues by using “qos queue weight” command. And the bandwidth will shared by the weight you configured between these weighted queues.

## Example

This example shows how to setup device with 3 strict priority queues and give other weighted queues with weight 5, 10, 15, 20, or 25.

```
Switch(config)#  
    qos queue strict-priority-num 3  
Switch(config)#  
    qos queue weight 5 10 15 20 25  
Switch#  
    show qos queueing  
qid-weights Ef - Priority  
1 - 5 dis- N/A  
2 - 10 dis- N/A  
3 - 15 dis- N/A  
4 - 20 dis- N/A  
5 - 25 dis- N/A  
6 - N/A ena- 6  
7 - N/A ena- 7  
8 - N/A ena- 8
```

# **QoS CoS**

## **Syntax**

```
qos cos <0-7>
```

## **Parameter**

**cos <0-7>** Specify the CoS value for the interface.

## **Default**

Default CoS value for interface is 0.

## **Mode**

Interface Configuration

## **Usage**

Sometimes, there is no qos information in the packets, such as CoS, DSCP, IP Precedence. But you can give the priority for packets by configuring the interface default cos value. If there is no qos information in the packets, the device will use this default cos value and find the cos-queue map to get the final destination queue. Use the “qos cos” command to assign a port default cos value.

## **Example**

This example shows how to configure default cos value 7 on interface fa1.

```
Switch(config)#
```

```
interface fa1
```

```
Switch(config-if)#  
  qos cos 7  
Switch(config-if)#  
  end  
Switch#  
  show qos interfaces fa1  
Port | CoS | Trust State | Remark Cos | Remark DSCP | Remark IP Prec  
fa1 | 7 | enabled | disabled | disabled |
```

# **QoS Trust (2)**

## **Syntax**

`qos trust`

`no qos trust`

## **Parameter**

None

## **Default**

Default interface qos trust state is enabled.

## **Mode**

Interface Configuration

## **Usage**

After the QoS function is enabled in basic mode, the device also supports a per interface enable/disable qos function. If the trust state on the interface is enabled, all ingress packets of this interface will remap according to the trust type and the qos maps. Otherwise, all ingress packets will be assigned to queue 1. Use “`qos trust`” to enable the trust state on the interface and use “`no qos trust`” to disable the trust state on the interface.

## **Example**

This example shows how to disable qos trust state on interface fa1.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    no qos trust
```

```
Switch(config-if)#
```

```
    end
```

```
Switch#
```

```
    show qos interfaces fa1
```

```
Port | CoS | Trust State | Remark Cos | Remark DSCP | Remark IP Prec
```

```
fa1 | 0 | disabled | disabled | disabled |
```

# QoS Remark

## Syntax

```
qos remark (cos | dscp | precedence)
```

```
no qos remark (cos | dscp | precedence)
```

## Parameter

<b>cos</b>	Enable/Disable cos remarking.
<b>dscp</b>	Enable/Disable dscp remarking.
<b>precedence</b>	Enable/Disable precedence remarking.

## Default

Default CoS remarking is disabled.

Default DSCP remarking is disabled.

Default IP Precedence remarking is disabled.

## Mode

Interface Configuration

## Usage

The QoS remarking feature allows you to change priority information in packets based on an egress queue. For example, if you want all packets egress from interface fa1 queue 1 to remark the cos value to be 5 for next tier of device, you can enable the cos remarking feature on fa1 and configure the queue-cos map for queue 1 map to cos 5. Use the "qos remark" command to enable remarking feature on specific type. And use "no qos remark" command to disable it.

## Example

This example shows how to enable remarking features on interface fa1.

```
Switch(config)#  
    interface fa1  
Switch(config-if)#  
    qos remark cos  
Switch(config-if)#  
    qos remark dscp  
Switch(config-if)#  
    qos remark precedence  
Switch(config-if)#  
    end  
Switch#  
    show qos interfaces fa1  
Port | CoS | Trust State | Remark Cos | Remark DSCP | Remark IP Prec  
fa1 | 0 | enabled | enabled | enabled | enabled
```

# Show QoS

## Syntax

show qos

## Parameter

None

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “show qos” command to show qoe mode and trust type.

## Example

This example shows how to check current qos mode.

Switch#

```
show qos
```

QoS Mode: basic

Basic trust: cos

# Show QoS Map

## Syntax

```
show qos map [(cos-queue | dscp-queue | precedence-queue | queue-cos |  
queue-dscp | queue-precedence)]
```

## Parameter

<b>cos-queue</b>	Show CoS to queue map.
<b>dscp-queue</b>	Show DSCP to queue map.
<b>precedence-queue</b>	Show IP Precedence to queue map.
<b>queue-cos</b>	Show queue to CoS map.
<b>queue-dscp</b>	Show queue to DSCP map.
<b>queue-precedence</b>	Show queue to IP Precedence map.

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “show qos map” command to show all kinds of mapping for qos remapping and remarking features.

## Example

## **Example**

This example shows how to show all qos maps.

```
Switch(config)#
```

```
    show qos map
```

CoS to Queue mappings

COS 0 1 2 3 4 5 6 7

Queue 2 1 3 4 5 6 7 8

DSCP to Queue mappings

d1:d2 0 1 2 3 4 5 6 7 8 9

0: 1 1 1 1 1 1 1 1 2 2

1: 2 2 2 2 2 2 3 3 3 3

2: 3 3 3 3 4 4 4 4 4 4

3: 4 4 5 5 5 5 5 5 5 5

# Show QoS Interface

## Syntax

```
show qos interface IF_PORTS
```

## Parameter

IF\_PORTS Select port to show qos configurations.

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use the “show qos interfaces” command to show port default cos ,remarking state, and remarking type state informations.

## Example

This example shows how to show qos configurations on interface fa1.

Switch#

```
show qos interfaces fa1
```

Port | CoS | Trust State | Remark Cos | Remark DSCP | Remark IP Prec

fa1 | 7 | enabled | disabled | disabled |

# Chapter 21

## Rate Limit

# Rate Limit

## Syntax

```
rate-limit ingress <0-1000000>
```

```
no rate-limit ingress
```

```
rate-limit egress <0-1000000> [<128-56319>]
```

```
rate-limit egress queue <1-8> <0-1000000> [<1024-56319>]
```

```
no rate-limit egress [<1-8>]
```

## Parameter

<b>Cir</b>	Specify the maximum number of kilobits per second of ingress traffic on a port. The range is 100 - max port speed.
<b>Cbs</b>	Specify the maximum permitted excess burst size (CBS) in bytes
<b>&lt;1-8&gt;</b>	Specify the egress shaper queue number

## Default

Rate limiting is disabled.

## Mode

Interface configuration

## **Usage**

Use the rate-limit ingress Interface Configuration mode command to limit the incoming traffic rate on a port. Use the no form of this command to disable the rate limit. Use the rate-limit egress Interface Configuration mode command to configure the egress port or queue shaper. Use the no form of this command to disable the shaper. You can verify your settings by entering the show running-config interfaces Privileged EXEC command.

## **Example**

The following example shows how to configure ingress port rate limit and egress port & queue shaper.

```
Switch(config)#  
    interfaces fa7  
Switch(config-if)#  
    rate-limit ingress 128  
Switch(config-if)#  
    rate-limit egress 2048  
Switch(config-if)#  
    rate-limit egress queue 1 512 1024  
Switch#  
    show running-config interfaces fa7  
    interface fa7  
        rate-limit ingress 128  
        rate-limit egress 2048 165
```

rate-limit egress queue 1 512 1024

# VLAN Rate Limit

## Syntax

```
rate-limit ingress <0-1000000> <9216-1000000> vlan <1-4094>  
no rate-limit vlan <1-4094>
```

## Parameter

<0-1000000>	Specify the average traffic rate (CIR) in 16 Kbps
<9216-1000000>	Specify the maximum burst size (CBS) in 128 bytes
<1-4094>	

## Default

No vlan ratelimit are configured

## Mode

Global Configuration or Interface Configuration

## Usage

Use the rate-limit ingress vlan global configuration command or Interface Configuration to add Per VLAN RateLimit or Per VLAN Per Port RateLimit Settings. Use the no form of this command to delete the vlan ratelimit setting. You can verify your settings by entering the show rate-limit vlan Privileged EXEC command.

## Example

```
Switch(config)#  
    rate-limit input 256 9216 vlan 2  
Switch(config)#  
    interface fa1  
Switch(config-if)#  
    rate-limit input 1024 9216 vlan 4  
Switch(config)#  
    show rate-limit vlan  
VLAN | Port | rate-limit [Kbps] | Burst [Bytes]  
2 | ALL | 256 | 9216  
4 | fa1 | 1024 | 9216
```

# Show Rate Limit VLAN

## Syntax

```
show rate-limit vlan [<1-4094>]
```

## Parameter

<1-4094> Specify the rate-limit VLAN to display

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show rate-limit vlan command in EXEC mode to display VLAN RateLimit settings.

## Example

This example shows how to display VLAN RateLimit setting

```
Switch(config)#
```

```
    show rate-limit vlan
```

```
VLAN | Port | rate-limit [Kbps] | Burst [Bytes]
```

```
2 | ALL | 256 | 9216
```

4 | fa1 | 1024 | 9216

# Chapter 22

## RMON

# RMON Event

## Syntax

```
rmon event <1-65535> [log] [trap COMMUNITY] [description  
DESCRIPTION] [owner NAME]  
no rmon event <1-65535>
```

## Parameter

<1-65535>	Specify event index to create or modify.
[log]	(Optional)Specify to show syslog.
[trap COMMUNITY]	(Optional)Specify SNMP community to show SNMP trap.
[description DESCRIPTION]	(Optional)Specify description of event
[owner NAME]	(Optional)Specify owner of event.

## Default

No default is defined.

## Mode

Global Configuration

## **Usage**

Use the rmon alarm command to add or modify a RMON alarm entry. Use the no form of this command to delete it.

## **Example**

The example shows how to add a RMON event entry with log and trap action and then modify it action to log only. You can verify settings by the following show rmon event command.

```
switch(config)#  
    rmon event 1 log trap public description test owner admin
```

```
switch(config)#  
    show rmon event 1
```

Rmon Event Index : 1

Rmon Event Type : Log and Trap

Rmon Event Community : public

Rmon Event Description : test

Rmon Event Last Sent :

Rmon Event Owner : admin

```
switch(config)#  
    rmon event 1 log description test owner admin
```

```
switch(config)#  
    show rmon event 1
```

Rmon Event Index : 1

Rmon Event Type : Log

Rmon Event Community : public

Rmon Event Description : test

Rmon Event Last Sent :

Rmon Event Owner : admin

# RMON Alarm

## Syntax

```
rmon alarm <1-65535> interface IF_PORT (drop-events|octets|pkts|broadcast-pkts|multicast pkts|crc-align-errors|undersize-pkts|oversize-pkts|fragments|jabbers|collisions|pkts64octets|pkts65to127octets|pkts128to255octets|pkts256to511octets|pkts512to1023octets|pkts1024to1518octets) <1-2147483647> (absolute|delta) rising <0-2147483647> <0-65535> falling <0-2147483647> <0-65535> startup (rising|rising-falling|falling) [owner NAME]no  
rmon alarm <1-65535>
```

## Parameter

<1-65535>	Specify alarm index to create or modify
IF_PORT	Specify the interface to sample
(variable)	Specify a mib object to sample
<1-2147483647>	Specify the time in seconds that the alarm monitors the MIB variable.
(absolute delta)	Specify absolute to compare sample counter absolutely.Specify delta to compare delta counter between samples
<0-2147483647>	Specify a number which the alarm trigger risingevent
<0-65535>	Specify event index when the rising threshold exceeds.
<0-2147483647>	Specify a number which the alarm trigger falling event
<0-65535>	Specify event index when the falling threshold exceeds.
(rising risingfalling falling)	Specify only to how rising or falling startup event. Or show either rising or falling startup event.
[owner NAME]	(Optional) Specify owner of alarm.

## **Default**

No default is defined.

## **Mode**

Global Configuration

## **Usage**

Use the rmon event command to add or modify a RMON event entry. Before you add an alarm entry, at least one event entry must be added. Use the no form of this command to delete it.

## **Example**

The example shows how to add a RMON alarm entry that sample interface fa1 packets delta count every 300 seconds. A Trigger event of index 1 occurs if it is over rising a threshold of 10000, or a trigger event index of 2 if it is over than the falling threshold. You can verify settings by the following show rmon alarm command.

```
switch(config)#  
rmon event 1 log  
switch(config)#  
rmon event 2 log  
switch(config)#  
show rmon event all  
Rmon Event Index : 1  
Rmon Event Type : Log
```

Rmon Event Community :

Rmon Event Description :

Rmon Event Last Sent :

Rmon Event Owner :

Rmon Event Index : 2

Rmon Event Type : Log

Rmon Event Community :

Rmon Event Description :

Rmon Event Last Sent :

Rmon Event Owner :

Switch(config)#

```
rmon alarm 1 interface fa1 pkts 300 delta rising 10000 1falling 100 1 startup rising-falling owner admin
```

Rmon Alarm Index : 1

Rmon Alarm Sample Interval : 300

Rmon Alarm Sample Interface : fa1

Rmon Alarm Sample Variable : Pkts

Rmon Alarm Sample Type : delta

Rmon Alarm Type : Rising or Falling

Rmon Alarm Rising Threshold : 10000

Rmon Alarm Rising Event : 1

Rmon Alarm Falling Threshold : 100

Rmon Alarm Falling Event : 1

Rmon Alarm Owner : admin

# RMON History

## Syntax

```
rmon history <1-65535> interface IF_PORT [buckets <1-65535>]  
[interval <1-3600>] [owner NAME]  
no rmon history <1-65535>
```

## Parameter

<1-65535>	Specify history index to create or modify.
IF_PORT	Specify the interface to sample
[bucket <1-65535>]	(Optional) Specify the maximum number of buckets.
[interval <>1-3600]	(Optional) Specify time interval for each sample
[owner NAME]	(Optional)Specify owner of history

## Default

No default is defined.

## Mode

Global Configuration

## Usage

Use the rmon history command to add or modify a RMON history entry. Use the no form of this command to delete it.

## Example

The example shows how to add a RMON history entry that monitors interface fa1 every 60 seconds and then modify it to monitor every 30 seconds. You can verify settings by the following show rmon history command.

```
switch(config)#  
    rmon history 1 interface fa1 interval 60 owner admin
```

```
switch(config)#  
    show rmon history 1
```

Rmon History Index : 1

Rmon Collection Interface: fa1

Rmon History Bucket : 50

Rmon history Interval : 60

Rmon History Owner : admin

```
switch(config)#  
    rmon history 1 interface fa1 interval 30 owner admin
```

```
switch(config)#  
    show rmon history 1
```

Rmon History Index : 1

Rmon Collection Interface: fa1

Rmon History Bucket : 50

Rmon history Interval : 30

Rmon History Owner : admin

# Clear RMON Interfaces Statistics

## Syntax

```
clear rmon interfaces IF_PORTS statistics
```

## Parameter

IF\_PORTS specifies ports to clear

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the clear rmon interfaces statistics command to clear RMON etherStat statistics those are recorded on interface.

## Example

The example shows how to clear RMON etherStat statistics on interface gi1. You can verify settings by the following show rmon interface statistics command.

```
switch#
```

```
clear rmon interfaces gi1 statistics
```

```
switch#  
    show rmon interfaces gi1 statistics  
  
Port gi1  
etherStatsDropEvents : 0  
etherStatsOctets : 0

```

etherStatsPkts512to10230octets : 0

etherStatsPkts1024to1518Octets : 0

# Show RMON Interfaces Statistics

## Syntax

```
show rmon interfaces IF_PORTS statistics
```

## Parameter

IF\_PORTS specifies ports to show

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show rmon interfaces statistics command to show RMON etherStat statistics of the interface.

## Example

The example shows how to show RMON etherStat statistics of interface gi1.

```
switch(config)#  
    show rmon interfaces gi1 statistics  
Port gi1  
etherStatsDropEvents : 0
```

etherStatsOctets : 81882

etherStatsPkts : 578

etherStatsPkts256to511Octets : 42

etherStatsPkts512to1023Octets : 55

etherStatsPkts1024to1518Octets : 0

# Show RMON Event

## Syntax

```
show rmon event (<1-65535> | all)
```

## Parameter

<1-65535> specifies event index to show

all Show all existed event

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show rmon event command to show an existing RMON event entry.

## Example

The example shows how to show a rmon event entry.

```
switch(config)#
```

```
rmon event 1 log trap public description test owner admin
```

```
switch(config)#  
    show rmon event 1  
  
Rmon Event Index : 1  
Rmon Event Type : Log and Trap  
Rmon Event Community : public  
Rmon Event Description : test  
Rmon Event Last Sent :  
Rmon Event Owner : admin
```

# Show RMON Event Log

## Syntax

```
show rmon event <1-65535> log
```

## Parameter

<1-65535> specifies event index to show event log

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show rmon event log command to show a log triggered by a RMON alarm.

## Example

The example shows how to show a rmon event log.

```
switch(config)#  
      show rmon event 1 log
```

Index : 1

Alarm Index : 1

Action : Startup Falling

Time : (32918334) 3 days, 19:26:23.34

Description : fa1.Pkts=0 <= 100

# Show RMON Alarm

## Syntax

```
show rmon alarm (<1-65535> | all)
```

## Parameter

<1-65535>	specifies alarm index to show
all	Show all existed alarm

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show rmon alarm command to show existing RMON alarm entries.

## Example

The example shows how to show an rmon alarm entry.

```
Switch(config)#
```

```
rmon alarm 1 interface fa1 pkts 300 delta rising 10000 1  
falling 100 1 startup rising-falling owner admin
```

Rmon Alarm Index : 1

Rmon Alarm Sample Interval : 300

Rmon Alarm Sample Interface : fa1

Rmon Alarm Sample Variable : Pkts

Rmon Alarm Sample Type : delta

Rmon Alarm Type : Rising or Falling

Rmon Alarm Rising Threshold : 10000

Rmon Alarm Rising Event : 1

Rmon Alarm Falling Threshold : 100

Rmon Alarm Falling Event : 1

Rmon Alarm Owner : admin

# Show RMON History

## Syntax

```
show rmon history (<1-65535> | all)
```

## Parameter

<1-65535>	specifies history index to show
All	Show all existed history

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show rmon history command to show existing RMON history entries.

## Example

The example shows how to show an RMON history entry.

```
switch(config)#  
rmon history 1 interface fa1 interval 30 owner admin
```

```
switch(config)#  
show rmon history 1  
Rmon History Index : 1  
Rmon Collection Interface: fa1  
Rmon History Bucket : 50  
Rmon history Interval : 30  
Rmon History Owner : admin
```

# Show RMON History Statistics

## Syntax

```
show rmon history <1-65535> statistic
```

## Parameter

<1-65535> specifies history index to show history statistic

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show rmon history statistic command to show statistics that are recorded by RMON history.

## Example

The example shows how to show RMON history statistics.

```
switch(config)#  
        show rmon history 1 statistics
```

# Chapter 23

## SNMP

# **SNMP**

## **Syntax**

snmp

no snmp

## **Parameter**

None

## **Default**

no snmp

## **Mode**

Global Configuration

## **Usage**

'no snmp' will disable snmp. 'snmp' will enable snmp. The configuration can use show snmp.

## **Example**

The following example specifies the set global snmp test.

Switch(config)#

snmp

Switch#

show snmp

SNMP is enabled.

# SNMP Trap

## Syntax

[no] snmp trap (auth|linkUpDown|warm-start|cold-start|port-security)

## Parameter

None

## Default

snmp trap auth

snmp trap linkUpDown

snmp trap warm-start

snmp trap cold-start

snmp trap port-security

## Mode

Global Configuration

## Usage

'no snmp trap auth' snmp will not send auth failure trap. 'no snmp trap linkUpDown' snmp will not send linkup and link down trap. 'no snmp trap warm-start snmp will not send warm start trap. 'no snmp trap cold-start' snmp will not send cold start trap.'no snmp trap port-security' snmp will not send port-security trap. The configuration can use show snmp trap.

## **Example**

The following example specifies the set trap auth disable test.

```
Switch(config)#
```

```
    no snmp auth
```

```
Switch#
```

```
    show snmp trap
```

```
SNMP auth failed trap : Disable
```

```
SNMP linkUpDown trap : Enable
```

```
SNMP warm-start trap : Enable
```

```
SNMP cold-start trap : Enable
```

```
SNMP port security trap: Enable
```

# SNMP View

## Syntax

```
snmp view NAME subtree OID oid-mask (all | MASK) viewtype  
(included | excluded)  
no snmp view NAME subtree (all |OID)
```

## Parameter

Name	View Name
OID	View subtree OID
(all   MASK)	View subtree OID mask. All: all mask bit is '1'
(include   exclude)	View subtree is accessed or not allowed access.
(all   OID)	Delete the View name all subtree OID or specifies OID

## Default

Default View is "all" and the subtree is 1. The type is included.

## Mode

Global Configuration

## Usage

The default view can't delete and be created by the user. The min view is sysUpTime. The configuration can use 'show snmp view' to check it.

## **Example**

The following example specifies the set view systemView test.

```
Switch(config)#
```

```
    snmp view systemView subtree 1.3.6.1.2.1.1 oid-mask all viewtype included
```

```
Switch#
```

```
    show snmp view
```

View Name	Subtree	OID	OID Mask	View Type
-----------	---------	-----	----------	-----------

all .1	all	included
--------	-----	----------

systemView	.1.3.6.1.2.1.1	all	included
------------	----------------	-----	----------

# SNMP Access Group

## Syntax

```
snmp group NAME version (1 |2c |3) (noauth | auth | priv) read-view
```

```
NAME write-view NAME [notify-view NAME]
```

```
no snmp group NAME security-mode version (1 |2c | 3)
```

## Parameter

<b>Group Name</b>	Access group name
<b>1   2c   3</b>	Access model for snmp v1/v2/v3
<b>noauth   auth   priv</b>	Noauth for snmp v1/v2 Auth and priv group for snmp v3
<b>Read-view</b>	Name Access group specifies read view
<b>Write-view</b>	Name Access group specifies write view
<b>Notify-view</b>	Name Access group specifies notify view

## Default

None

## Mode

Global Configuration

## **Usage**

The group version 1 and 2c are only for snmp community use. Version 3 is only for snmp user use. When the group version is 1 or 2c , You can only use noauth. The read/write/notify view must exist to proceed. The configuration can use 'show snmp group' to check.

## **Example**

The following example specifies that set snmp group test.

```
Switch(config)#
```

```
    snmp group group1 1 noauth read-view all write-view ""
```

```
Switch(config)#
```

```
    snmp group group2 2c noauth read-view all write-view all
```

```
Switch(config)#
```

```
    snmp group group3 3 auth read-view all write-view all
```

```
Switch#
```

```
    show snmp group
```

Group	Name	Model	Level	ReadView	WriteView	NotifyView
group1		v1	noauth	all	---	---
group2		v2c	noauth	all	all	---
group3		v3	auth	all	all	---

# SNMP Community

## Syntax

```
snmp community NAME [group NAME] [view NAME] (ro|rw)
```

```
no snmp community NAME
```

## Parameter

<b>Community Name</b>	Snmp v1/v2 community name
<b>[group Name]</b>	Snmp community specifies access group name
<b>[view Name]</b>	Snmp community specifies view
<b>(ro   rw)</b>	Snmp community read or readwrite attribute

## Default

None

## Mode

Global Configuration

## Usage

The community can't specify group and view at the same time. The community specifies the group which must exist and must match the security model. The community specifies the view which must exist as well. It will generate the no exist v1 or v2 access group for the community. The configuration can use 'show snmp community' to check.

## Example

The following example specifies three configured community test.

```
Switch(config)#  
    snmp community public ro
```

```
Switch(config)#  
    snmp community private rw  
Switch(config)#  
    snmp community test1 view all
```

```
Switch#  
    show snmp community
```

Community	Name	Group	Name	View	Access
public	public_group	all	ro		
private	private_group	all	rw		
test1	test1_group	all	rw		

# SNMP User

## Syntax

```
snmp user USERNAME GROUPNAME [auth (md5|sha)
```

```
AUTHPASSWD]
```

```
snmp user USERNAME GROUPNAME auth (md5|sha)
```

```
AUTHPASSWD priv PRIVPASSWD
```

```
no snmp user NAME
```

## Parameter

<b>USERNAME</b>	Snmp user name
<b>GROUPNAME</b>	Snmp user specifies group.
<b>[auth (md5   sha)]</b>	Snmp user auth protocol
<b>AUTHPASSWD</b>	Snmp user auth password
<b>PRIVPASSWD</b>	Snmp user priv password

## Default

None

## Mode

Global Configuration

## **Usage**

The group version must be v3 and the security level must match the snmp user configuration. The AUTHPASSWD and PRIVPASSWD min length is 8. The configuration can use 'show snmp user' to check.

## **Example**

The following example specifies the set auth snmp user test.

```
Switch(config)#  
    snmp group group3 3 auth read-view all write-view all  
Switch(config)#  
    snmp user user1 group3 auth md5 12345678
```

```
Switch# show snmp user
```

Username: user1

Password: \*\*\*\*\*

Privilege Mode: rw

Access GroupName: group3

Authentication Protocol: md5

Encryption Protocol: none

Access SecLevel: auth

# SNMP EngineID

## Syntax

```
snmp engineid (default | ENGINEID)
```

```
snmp engineid remote (A.B.C.D|X:X::X:X) ENGINEID
```

```
no snmp engineid remote (A.B.C.D|X:X::X:X)
```

## Parameter

(default  ENGINEID)	Default is MAC address. ENGINEID is 10~64 hex characters
(A.B.C.D X:X::X:X)	Host ipv4/ipv6 address

## Default

Snmp engineid default

## Mode

Global Configuration

## Usage

The default engineid is DUT MAC address. The configuration can use 'show snmp engineid'.

## **Example**

The following example specifies that set remote engine id test.

```
Switch(config)#
```

```
    snmp engineid remote 192.168.1.100 112233445566
```

```
Switch#
```

```
    show snmp engineid
```

```
Local SNMPV3 Engine id: DEADBEEF0114
```

```
IP address Remote SNMP engineID
```

```
192.168.1.100 112233445566
```

# SNMP Host

## Syntax

```
snmp host (A.B.C.D|X:X::X:X|HOSTNAME) [(traps | informs)] [version (1|2c)] NAME [udp-port <1-65535>] [timeout <1-300>] [retries <1-255>] snmp host (A.B.C.D|X:X::X:X|HOSTNAME) [(traps | informs)] version 3 [(auth | noauth | priv)] NAME [udp-port <1-65535>] [timeout <1-300>] [retries <1-255>]
```

```
no snmp host (A.B.C.D|X:X::X:X|HOSTNAME) [(traps | informs)] [version (1|2c|3)]
```

## Parameter

<b>(A.B.C.D X:X::X:X HOST NAME)</b>	Snmp trap host ipv4/ipv6 address or host name
<b>[(traps   informs)]</b>	Snmp notification type is traps or informs
<b>[version (1 2c 3)]</b>	V1/v2c/v3 traps
<b>[(auth   noauth   priv)]</b>	V3 trap for auth/noauth/priv
<b>NAME</b>	Snmp community name or user name
<b>[udp-port &lt;1-65535&gt;]</b>	The manage receive trap udp port num
<b>[timeout &lt;1-300&gt;]</b>	The notify type is inform timeout value
<b>[retries &lt;1-255&gt;]</b>	The notify type is inform retries

## Default

None

## Mode

Global Configuration

## **Usage**

This command can't configure version 1 inform. When using traps, this command can't configure the udp-port and retries. The host user NAME which is a snmp community or user NAME must exist. The host user host security level must match the snmp user security level. The configuration can use 'show snmp host' to check.

## **Example**

The following example specifies the display gvrp error statistics and statistics test.

```
Switch(config)#
```

```
    snmp community public ro
```

```
Switch(config)#
```

```
    snmp community private rw
```

```
Switch(config)#
```

```
    snmp group group3 3 auth read-view all write-view all
```

```
Switch(config)#
```

```
    snmp user user1 group3 auth md5 12345678
```

```
Switch(config)#
```

```
    snmp host 192.168.1.100 version 2c public
```

```
Switch(config)#
```

```
    snmp host 192.168.1.100 informs version 2c private
```

```
Switch(config)#  
    snmp host 192.168.1.100 version 3 auth user1  
  
Switch#  
    show snmp host  
  
Server Community Name Notification Version Notification  
Type UDP Port Retries Timeout  
192.168.1.100 public v2c trap  
192.168.1.100 private v2c inform 200 3 10  
192.168.1.100 user1 v3 trap
```

# Show SNMP

## Syntax

show snmp

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will show the snmp status.

## Example

The following example specifies that show snmp test.

Switch#

```
show snmp
```

# Show SNMP Trap

## Syntax

show snmp trap

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the snmp trap class auth/linkupdown/cold-start/warmstart/ port-security/ status.

## Example

The following example specifies the display snmp trap test.

Switch#

```
show snmp trap
```

# Show SNMP View

## Syntax

show snmp view

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the snmp view entry.

## Example

The following example specifies the display snmp view test.

Switch#

```
show snmp view
```

# Show SNMP Group

## Syntax

show snmp group

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the snmp group.

## Example

The following example specifies the display snmp group test.

Switch#

```
show snmp group
```

# Show SNMP Community

## Syntax

```
show snmp community
```

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the snmp community entry.

## Example

The following example specifies the display snmp community test.

Switch#

```
show snmp community
```

# Show SNMP Host

## Syntax

show snmp host

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the snmp host entry.

## Example

The following example specifies that display snmp host test.

Switch#

```
show snmp host
```

# Show SNMP User

## Syntax

show snmp user

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the snmp user entry.

## Example

The following example specifies that display snmp user test.

Switch#

```
show snmp user
```

# Show SNMP EngineID

## Syntax

```
show snmp engineid
```

## Parameter

None

## Default

None

## Mode

Privileged mode

## Usage

This command will display the snmp local/remote engine id.

## Example

The following example specifies the display snmp local/remote engine id test.

Switch#

```
show snmp engineid
```

# Chapter 24

# Storm Control

# Storm-Control Unit

## Syntax

storm-control unit (bps | pps)

## Parameter

<b>bps</b>	Storm control rate calculates by octet-based
<b>pps</b>	Storm control rate calculates by packet-based

## Default

Default storm control unit is bps.

## Mode

Global Configuration

## Usage

The Storm Control mechanism will try to calculate if ingress packets exceed the configured rate or not and enact the corresponding action. This command allows you to change the unit of the calculating method.

## Example

This example shows how to configure the Storm Control rate unit as pps.

Switch(config)#

```
  storm-control unit pps
```

This example shows how to show the storm control global configuration.

Switch#

```
show storm-control
```

Storm control preamble and IFG: Excluded

Storm control unit: pps

# Storm-Control IFG

## Syntax

```
storm-control ifg (include | exclude)
```

## Parameter

<b>include</b>	Include preamble & IFG (20 bytes) when count ingress storm control rate.
<b>exclude</b>	Exclude preamble & IFG (20 bytes) when count ingress storm control rate

## Default

Default storm control inter frame gap is excluded.

## Mode

Global Configuration

## Usage

The Storm Control mechanism will try to calculate if ingress packets exceed the configured rate or not and do the corresponding action. This command allows you to decide to include/exclude the preamble and inter frame gap into the calculation.

## Example

This example shows how to configure the Storm Control rate unit as pps.

```
Switch(config)#
```

```
storm-control ifg include
```

This example shows how to show Storm Control global configuration.

Switch#

```
show storm-control
```

Storm control preamble and IFG: Included

Storm control unit: pps

# Storm-Control

## Syntax

storm-control

no storm-control

storm-control (broadcast | unknown-unicast | unknown-multicast) no storm-control (broadcast | unknown-unicast | unknown-multicast)

storm-control (broadcast | unknown-unicast | unknown-multicast) level <0-1000000>

no storm-control (broadcast | unknown-unicast | unknown-multicast) level

## Parameter

<b>broadcast</b>	Select broadcast storm control type
<b>unknown-unicast</b>	Select unknown unicast storm control type
<b>unknownmulticast</b>	Select unknown multicast storm control type
<b>level &lt;0-1000000&gt;</b>	Specify the storm control rate for selected type

## Default

Default broadcast storm control is disabled.

Default unknown multicast storm control is disabled

Default unknown unicast storm control is disabled

Default broadcast storm control rate is 10000.

Default unknown multicast storm control rate is 10000.

Default unknown unicast storm control rate is 10000.

## **Mode**

Interface Configuration

## **Usage**

The Storm Control function is able to enable/disable on each single port. Use the “storm control” command to enable the storm control feature on the selected ports. Use the “no storm control” command to disable the Storm Control feature. Not every port is able to enable/disable on each port. Each Storm Control type is also able to enable/disable on each single port. Use the “storm-control (broadcast | unknown-unicast | unknown-multicast)” command to enable the storm control type you need and use no form to disable it. Each control type is allowed to have a different storm control rate. Use the “stormcontrol (broadcast | unknown-unicast | unknown-multicast) level” command to configure it and use no form to restore to its default value.

## **Example**

This example shows how to enable Storm Control on interface fa1.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    storm-control
```

This example shows how to enable broadcast Storm Control and configure the broadcast storm control rate to 200.

```
Switch(config)#  
  interface fa1  
Switch(config-if)#  
  storm-control broadcast  
Switch(config-if)#  
  storm-control broadcast level 200
```

This example shows how to show the current storm control configuration on interface fa1.

```
Switch#  
  show storm-control interfaces fa1  
Port | State | Broadcast | Unkown-Multicast | Unknown-Unicast | Action|  
| pps | pps | pps  
fa1 enable 200 Off( 10000) Off( 10000)  
Shutdown
```

# Storm-Control Action

## Syntax

storm-control action (drop | shutdown)

no storm-control action

## Parameter

drop	Storm control rate calculates by octet-based
shutdown	

## Default

Default storm control action is drop.

## Mode

Interface Configuration

## Usage

The storm control mechanism allows you to drop packets which exceed the Storm Control rate or just shutdown the port. Use no form to restore to default actions.

## **Example**

This example shows how to configure Storm Control action to shutdown the port on interface fa1.

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    storm-control action shutdown
```

This example shows how to show the Storm Control action on interface fa1.

```
Switch#
```

```
    show storm-control interfaces fa1
```

```
Port | State | Broadcast | Unkown-Multicast | Unknown-Unicast | Action|
```

```
| pps | pps | pps
```

```
fa1 disable Off( 10000) Off( 10000) Off( 10000)
```

```
Shutdown
```

# Show Storm-Control

## Syntax

show storm-control

show storm-control interface IF\_PORTS

## Parameter

IF\_PORTS Specify port to show.

## Default

No default value for this command

## Mode

Privileged EXEC

## Usage

Use the “show storm-control” command to show all Storm Control related configurations including global configuration and per port configurations. Use the “show storm-control interface” command to show selected port Storm Control configurations.

## Example

This example shows how to show storm control global configuration.

Switch#

```
show storm-control
```

Storm control preamble and IFG: Excluded

Storm control unit: pps

This example shows how to show current storm control configuration on interface fa1.

Switch#

```
show storm-control interfaces fa1
```

Port | State | Broadcast | Unkown-Multicast | Unknown-Unicast | Action

| | pps | pps | pps

fa1 enable 200 Off( 10000) Off( 10000)

Shutdown

# Chapter 25

# Spanning Tree

# Spanning-Tree

## Syntax

spanning-tree

no spanning-tree

## Default

spanning-tree

## Mode

Global Configuration

## Usage

Enables or Disables the Spanning-Tree Protocol. Use the `spanning-tree` command to enable STP or `no spanning-tree` command to disable STP.

## Example

The following example sets the STP status to enabled/disabled.

Switch285500#

  configure

Switch285500(config)#

    spanning-tree

Switch285500(config)#

exit

Switch285500#

show spanning-tree

Spanning tree enabled mode STP

# Spanning-Tree BPDU

## Syntax

```
spanning-tree bpdu ( filtering | flooding )
```

## Parameter

( filtering | flooding ) Specify the forwarding action of BPDU to filtering or flooding.

## Default

```
spanning-tree bpdu flooding
```

## Mode

Global Configuration

## Usage

Configure the BPDU forwarding action when STP is disabled.

## Example

This example sets the BPDU forwarding action to filtering.

```
Switch285500#
```

```
  configure
```

```
Switch285500(config)#
```

```
    no spanning-tree
```

```
Switch285500(config)#  
    spanning-tree bpdu filtering
```

```
Switch285500(config)#  
    exit
```

```
Switch285500#  
    show spanning-tree
```

Spanning tree disabled (BPDU filtering) mode STP

Default port cost method: long

```
Switch285500#

# Spanning-Tree Mode

## Syntax

```
spanning-tree mode ( stp | rstp | mstp )
```

## Parameter

<b>stp</b>	Specify the mode to Spanning Tree Protocol.
<b>rstp</b>	Specify the mode to Rapid Spanning Tree Protocol.
<b>mstp</b>	Specify the mode to Multiple Spanning Tree Protocol

## Default

```
spanning-tree mode stp
```

## Mode

Global Configuration

## Usage

Configure the force-version of the Spanning-Tree Protocol. The configuration could be shown by the "show spanning-tree" command.

## Example

This example sets STP mode to RSTP (Rapid Spanning Tree Protocol).

```
Switch285500#
```

```
configure
```

Switch285500(config)#

# Spanning-Tree Pathcost Method

## Syntax

```
spanning-tree pathcost method ( long | short )
```

## Parameter

long Specify the type of pathcost value to 32 bits (long).

short Specify the type of pathcost value to 16 bits (short).

## Default

```
spanning-tree pathcost method long
```

## Mode

Global Configuration

## Usage

This command configures the BPDU pathcost value type to 16bits (short) or 32 bits (long). The configuration could be shown by the "show spanning-tree" command.

## Example

This example sets the type of pathcost value to short.

```
Switch285500#
```

```
configure
```

```
Switch285500(config)#  
    spanning-tree pathcost method short
```

```

# Spanning-Tree Port-Priority

## Syntax

```
spanning-tree port-priority <0-240>
```

## Parameter

<0-240> Specify the STP port priority. It must be multiples of 16.

## Default

```
spanning-tree port-priority 128
```

## Mode

Port Configuration

## Usage

This command per port configures the STP port priority. The configuration could be shown by the "show spanning-tree interface" command.

## Example

This example sets port fa1 STP port priority to 64.

```
Switch285500#
```

```
configure
```

```
Switch285500(config)#  
    interface fa1  
Switch285500(config-if)#  
    spanning-tree port-priority 64  
Switch285500(config-if)#

```

Switch285500#

# Spanning-Tree Cost

## Syntax

```
spanning-tree cost <0-200000000>
```

## Parameter

<0-200000000> Specify the STP port cost. In short pathcost method, the range is from 0 to 65535. ( 0 = Auto )

## Default

```
spanning-tree cost 0
```

## Mode

Port Configuration

## Usage

This command per port configures the STP port cost. The configuration could be shown by the "show spanning-tree interface" command.

## Example

This example sets port fa1 STP port cost to 100.

```
Switch285500#
```

```
configure
```

```
Switch285500(config)#  
    interface fa1  
Switch285500(config-if)#

# Spanning-Tree BPDU-Guard

## Syntax

```
spanning-tree bpdu-guard
```

```
no spanning-tree bpdu-guard
```

## Default

```
no spanning-tree bpdu-guard
```

## Mode

Port Configuration

## Usage

This command per port configures the STP BPDU Guard status. The configuration could be shown by the "show spanning-tree interface" command.

## Example

This example sets port fa1 STP BPDU Guard status to enabled.

```
Switch285500#
```

```
  configure
```

```
Switch285500(config)#
```

```
    interface fa1
```

Switch285500(config-if)#

  spanning-tree bpdu-guard

Switch285500(config-if)#

  exit

Switch285500(config)#

  exit

Switch285500#

  show spanning-tree interfaces fa1

Port fa1 enabled

BPDU: sent 2327, received 0

Switch285500#

# Spanning-Tree Link-Type

## Syntax

(point-to-point | shared) Specify the STP port link-type to Point-to-Point or Shared medium.

## Default

**no spanning-tree link-type**

## Mode

Port Configuration

## Usage

This command per port configures the STP port link-type. The configuration could be shown by “show spanning-tree interface” command.

## Example

This example sets port fa1 STP port link-type to be Shared.

```
Switch285500#
```

```
    configure
```

```
Switch285500(config)#
```

```
    interface fa1
```

Switch285500(config-if)#

  spanning-tree link-type shared

# Spanning-Tree MST Configuration

## Syntax

```
spanning-tree mst configuration
```

```
name NAME
```

```
revision <0-65535>
```

```
instance <0-15> vlan [ VLAN-LIST ]
```

## Parameter

<b>NAME</b>	Specify the MSTP bridge name of MST Configuration ID. (Max. 32 chars)
<b>&lt;0-65535&gt;</b>	Specify the MSTP revision number of MST Configuration ID.
<b>&lt;0-15&gt;</b>	Specify the MST instance ID.
<b>VLAN-LIST</b>	Specify the VLAN list to be mapped to this specified instance.

## Default

```
name (Switch's MAC address)
```

```
revision 0
```

```
instance 0 vlan all
```

## Mode

```
Global Configuration
```

## **Usage**

This command configures the MSTP Configuration ID. The configuration could be shown by the “show spanning-tree mst configuration” command.

## **Example**

This example sets MSTP Configuration ID, name to `Region1`, revision to `123` and VLAN 100 mapped to instance 1.

```
Switch285500#
```

```
    configure
```

```
Switch285500(config)#
```

```
    spanning-tree mst configuration
```

```
Switch285500(config-mst)#
```

```
    name Region1
```

```

Switch285500#
```

# Spanning-Tree MST Priority

## Syntax

```
spanning-tree mst <0-15> priority <0-61440>
```

## Parameter

<0-15> Specify the MST instance ID to configure.

<0-61440> Specify the bridge priority, it must multiples of 4096.

## Default

```
spanning-tree mst 0 priority 32768
```

## Mode

Global Configuration

## Usage

This command configures the MST instance priority. The configuration could be shown by the "show spanning-tree mst" command.

## Example

This example sets the priority of MST instance 1 to 4096.

```
Switch285500#
```

```
configure
```

```
Switch285500(config)#  
    spanning-tree mode mstp  
Switch285500(config)#  
    spanning-tree mst 1 priority 4096
```

```
Switch285500(config)#  
    exit
```

```
Switch285500#  
    show spanning-tree mst 1
```

#### MST Instance Information

# Spanning-Tree MST Cost

## Syntax

```
spanning-tree mst <0-15> cost <0-200000000>
```

## Parameter

<0-15>	Specify the MST instance ID to configure.
<0-200000000>	Specify the STP port cost. In short pathcost method, the range is from 0 to 65535. ( 0 = Auto )

## Default

```
spanning-tree mst 0 cost 0
```

## Mode

Port Configuration

## Usage

This command configures the MSTP port cost for this MST instance. The configuration could be shown by the "show spanning-tree mst interface" command.

## Example

This example sets the port fa1 STP pathcost of the MST instance 1 to 100.

```
Switch285500#
```

```
configure
```

```
Switch285500(config)#  
    interface fa1  
Switch285500(config-if)#  
    spanning-tree mst 1 cost 100  
Switch285500(config-if)#  
    exit  
Switch285500(config)#  
    exit

# Spanning-Tree MST Port-Priority

## Syntax

```
spanning-tree mst <0-15> priority <0-240>
```

## Parameter

<0-15>	Specify the MST instance ID to configure.
<0-240>	Specify the STP port priority. It must be multiples of 16.

## Default

```
spanning-tree mst 0 port-priority 128
```

## Mode

Port Configuration

## Usage

This command configures the MST port priority. The configuration could be shown by the “show spanning-tree mst interface” command.

## Example

This example sets port fa1 MST port priority of MST instance 1 to 32.

```
Switch285500#
```

```
configure
```

```
Switch285500(config)#  
    interface fa1  
Switch285500(config-if)#  
    spanning-tree mst 1 cost 0  
Switch285500(config-if)#  
    exit  
Switch285500(config)#  
    exit  
Switch285500#

# Chapter 26

# System File

# Boot System

## Syntax

```
boot system (image0 | image1)
```

## Parameter

image0	Boot from flash image partition 0
image1	Boot from flash image partition 1

## Default

Default boot image is image0.

## Mode

Global Configuration

## Usage

Dual image allows a user to have a backup image in the flash partition. Use the "boot system" command to select the active firmware image and another firmware image will become a new backup.

## Example

This example shows how to select image1 as the active image.

```
Switch(config)#
```

```
boot system image1
```

Select "image1" Success

This example shows how to show active image partition.

Switch#

  show flash

# **Save**

## **Syntax**

Save

## **Parameter**

## **Default**

No default value for this command.

## **Mode**

Privileged EXEC

## **Usage**

Use the “save” command to save the running configuration to the startup configuration file. This command is equal to “copy running-config startup-config”.

## **Example**

This example shows how to save running configuration to the startup configuration.

Switch#

```
save
```

Success

This example shows how to show startup configuration

Switch#

```
show startup-config
```

! System Description:

! System Version: v2.5.0-beta.32811

! System Name:

! System Up Time: 0 days, 4 hours, 31 mins, 43 secs

voice-vlan dscp 0

# Copy

## Syntax

```
copy (flash:// | tftp://) (flash:// | tftp://)
```

```
copy tftp:// (backup-config | running-config | startup-config)
```

```
copy (backup-config | running-config | startup-config) tftp://
```

```
copy (backup-config | startup-config) running-config
```

```
copy (backup-config | running-config) startup-config
```

```
copy (running-config | startup-config) backup-config
```

## Parameter

<b>flash://</b>	Specify the file stored in flash to operation. Available files are: flash://startup-config flash://backup-config flash://rsa1 flash://rsa2 flash://dsa2 flash://image0 flash://image1 flash://ram.log flash://flash.log
<b>tftp://</b>	Specify remote tftp server and remote file name. The format is “tftp://192.168.1.111/remote_file_name”
<b>running-config</b>	Running configuration file
<b>startup-config</b>	Startup configuration file
<b>backup-config</b>	Backup configuration file

## Default

No default value for this command.

## Mode

Privileged EXEC

## **Usage**

There are many types of files in system. These files are very important for the administrator to manage the switch. The most common file operation is copy. By using these copy commands, you can upgrade or backup the following type of files.

**Firmware Image**

**Configuration Files**

**Syslog Files**

**Language Files**

**Security Certificate**

**Example**

This example shows how to copy running configuration to startup configuration.

Switch#

```
copy running-config startupst-config
```

This example shows how to backup running configuration to remote tftp  
server 192.168.1.11 with file name test1.cfg.

Switch#

```
copy running-config  
tftp://192.168.1.111/test1.cfg
```

Uploading file...Please Wait...

Uploading Done

This example shows how to upgrade startup configuration from remote tftp server 192.168.1.111 with file name test2.cfg.

Switch#

```
copy tftp://192.168.1.111/test2.cfg startupconfig
```

Downloading file...Please Wait...

Downloading Done

Upgrade config success. Do you want to reboot now?

(y/n)n

This example shows how to backup security file dsa2 to remote tftp server 192.168.1.111 with file name dsa2.

Switch#

```
copy flash://dsa2 tftp://192.168.1.111/dsa2
```

Uploading file...Please Wait...

Uploading Done

# Delete

## Syntax

```
delete (startrup-config | backup-config | flash://)
```

```
delete system (image0 | image1)
```

## Parameter

<b>flash://</b>	Specify the configuration file stored in flash to delete. Available files are: flash://startup-config flash://backup-config
<b>startup-config</b>	Delete startup configuration file
<b>backup-config</b>	Delete backup configuration file
<b>image0</b>	Delete flash image0.
<b>image1</b>	Delete flash image1

## Default

No default value for this command.

## Mode

Privileged EXEC

## **Usage**

Use the “delete” command to delete configuration files or use the “delete system” command to delete a firmware image stored in flash. The “delete startup-config” command is used to restore to the factory default settings and is equal to the command “restore-defaults”.

## **Example**

This example shows how to delete backup configuration file.

Switch#

```
  delete backup-config
```

This example shows how to delete backup firmware image from flash.

Switch#

```
  delete system image1
```

This example shows how to show file status in flash.

Switch#

```
  show flash
```

# **Restore-Defaults**

## **Syntax**

restore-defaults

## **Parameter**

None

## **Default**

No default value for this command.

## **Mode**

Privileged EXEC

## **Usage**

Use the “restore-defaults” command to restore factory default settings of the system. The command is equal to “delete startup-config”,

## **Example**

This example shows how to restore factory defaults.

Switch#

```
restore-defaults
```

Restore Default Success. Do you want to reboot now? (y/n)n

# Show Config

## Syntax

show (running-config | startup-config | backup-config)

## Parameter

running-config Show running configuration on terminal

startup-config Show startup configuration on terminal

backup-config Show backup configuration on terminal

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

The configuration file is text based. Therefore, the configuration on the terminal can be shown and read by this command.

## Example

This example shows how to show the startup configuration.

Switch#

```
show startup-config
```

# Show Flash

## Syntax

show flash

## Parameter

None

## Default

No default value for this command.

## Mode

Privileged EXEC

## Usage

Use “show flash” command to show all files’ status which stored in flash.

## Example

This example shows how to show all files status stored in flash.

Switch#

```
show flash
```

# Chapter 27

## Time

# Clock Set

## Syntax

```
clock set HH:MM:SS (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) <1-31> <2000-2037>
```

## Parameter

HH:MM:SS Specify static time of year month day hour minute second

(jan|feb|mar|apr

|may|jun|jul|augl

|sep|oct|nov|dec) <1-31>

<2000-2037>

## Default

No default is defined.

## Mode

Global Configuration

## Usage

Use the clock set command to set the static time. The static time won't save to configuration file.

## **Example**

The example shows how to set static time of switch. You can verify settings by the following show show clock command.

switch#

```
clock set 11:03:00 sep 21 2012
```

```
11:03:00 DFL(UTC+8) Sep 21 2012
```

switch#

```
show clock
```

```
11:03:21 DFL(UTC+8) Sep 21 2012
```

```
No time source
```

# Clock Timezone

## Syntax

```
clock timezone ACRONYM HOUR-OFFSET [minutes <0-59>]
```

```
no clock timezone
```

## Parameter

<b>ACRONYM</b>	Specify acronym name of time zone
<b>HOUR-OFFSET</b>	Specify hour offset of time zone
<b>Minutes &lt;1-59&gt;</b>	Specify minute offset of time zone

## Default

Default time zone is UTC+8.

## Mode

Global Configuration

## Usage

Use the `clock timezone` command to set the timezone settings. Use the `no` form of this command to apply the default settings.

## Example

The example shows how to set time zone of switch and then restore to default time zone. You can verify settings by the following show show clock command.

```
switch(config)#  
    clock timezone test +5
```

```
switch(config)#  
    show clock detail
```

10:13:27 test(UTC+5) Sep 21 2012

No time source

Time zone:

Acronym is test

Offset is UTC+5

```
switch(config)#
```

```
    no clock timezone
```

```
switch(config)#
```

```
    show clock detail
```

13:14:50 DFL(UTC+8) Sep 21 2012

No time source

Time zone:

Acronym is DFL

Offset is UTC+8

# Clock Source

## Syntax

clock source (local|sntp)

## Parameter

local	Specify to use static time
Sntp	Specify to use sntp time

## Default

Default is using local time.

## Mode

Global Configuration

## Usage

Use the clock source command to set the source of time. "local" means that you use the static setting by the user manual set. The "sntp" means that you use the remote SNTP server. Use the no form of this command to reset to default settings.

## Example

The example shows how to set clock source of switch. You can verify settings by the following show show clock command.

```
switch(config)#
```

```
    clock source sntp
```

switch(config)#

  show clock detail

08:32:12 test(UTC+5) Sep 21 2012

No time source

# Clock Summer-Time

## Syntax

```
clock summer-time ACRONYM date (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) <1-31>
<2000-2037> HH:MM (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) <1-31> <2000-2037> HH:MM [<1-1440>]
clock summer-time ACRONYM recurring (usa|eu) [<1-1440>]
clock summer-time ACRONYM recurring (<1-5>|first|last) (sun|mon|tue|wed|thu|fri|sat)
(jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) HH:MM (<1-5>|first|last)
(sun|mon|tue|wed|thu|fri|sat) (jan|feb|mar|apr|may|jun|jul|aug|sep|oct|nov|dec) HH:MM [<1-1440>]
no clock summer-time
```

## Parameter

<b>ACRONYM</b>	Specify acronym name of time zone
(jan feb mar apr may jun jul aug sep oct nov dec) <1-31> <2000-2037> HH:MM (jan feb mar apr may jun jul aug sep oct nov dec) <1-31> <2000- 2037> HH:MM	Specify non-recurring daylight saving time duration.
<1-1440>	Specify adjust offset of daylight saving time
usa	Using daylight saving time in the United States that starts on the second Sunday of March and ends on the first Sunday of November.
eu	Using daylight saving time in the Europe that starts on the last Sunday in March and ending on the last Sunday in October.
(<1-5> first last) (sun mon tue wed thu fri sat) (jan feb mar apr may jun jul aug sep oct nov dec) HH:MM (<1-5> first last) (sun mon tue wed thu fri sat) (jan feb mar apr may jun jul aug sep oct nov dec) HH:MM	Specify recurring daylight saving time duration

## Default

No default daylight saving time is defined.

## **Mode**

Global Configuration

## **Usage**

Use the `clock summer-time` command to set daylight saving time for the system time. The “usa” or “eu” settings means that the global daylight saving policy which is defined by international organizations is in use. In both the “date” and “recurring” settings, the first part of the command specifies when summer time begins and the second part specifies when it ends. All times are relative to the local time zone. The “recurring” setting means that time is adjusted every year within the month . Use the `no` form of this command to apply the default settings.

## **Example**

The example shows how to set clock source for the switch. You can verify settings by the following `show clock` command.

```
switch(config)#
```

```
    clock source sntp
```

```
switch(config)#
```

```
    show clock detail
```

```
08:32:12 test(UTC+5) Sep 21 2012
```

```
No time source
```

# Show Clock

## Syntax

```
show clock [detail]
```

## Parameter

detail Show more detail information of clock

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show clock command to show the clock on the switch. The “detail” means that show more information of clock such as time zone and daylight saving time.

## Example

The example shows how to show clock of switch and detail information.

```
Switch334455(config)#
```

```
clock source sntp
```

```
Switch334455(config)#  
    clock summer-time DLS recurring usa
```

```
Switch334455(config)#  
    sntp host 192.168.1.100
```

```
Switch334455(config)#  
    show clock
```

```

# **SNTP**

## **Syntax**

snntp host HOSTNAME [port <1-65535>]

no snntp

## **Parameter**

<b>HOSTNAME</b>	Specify ip address or hostname of snntp server
<b>Sntp</b>	Specify server port of snntp server

## **Default**

No default SNTP server defined.

## **Mode**

Global Configuration

## **Usage**

Use the snntp command to set a remote SNTP server. The default server port is 123. Use the no form of this command to set the default settings.

## Example

The example shows how to set the remote SNTP server of switch. You can verify settings by the following show sntp command.

```
switch(config)#
    clock source sntp
switch(config)#
    sntp host 192.168.1.100
switch(config)#
    show sntp
SNTP is Enabled
SNTP Server address: 192.168.1.100
SNTP Server port: 123
```

# Show SNTP

## Syntax

show sntp

## Parameter

None

## Default

No default is defined

## Mode

Global Configuration

## Usage

Use the show sntp command to remote SNTP server information.

## Example

The example shows how to show the remote SNTP server.

```
Switch334455(config)#
```

```
    show sntp
```

SNTP is Enabled

SNTP Server address: 192.168.1.100

SNTP Server port: 123

# Chapter 28

## VLAN

# VLAN

## Syntax

vlan

no vlan

## Default

vlan 1

## Mode

Global Configuration

## Usage

Create or remove a VLAN entry. Using the `vlan` command to enter the VLAN configuration mode.

## Example

The following example creates and removes a VLAN entry (100).

SwitchEF0101#

  configure

SwitchEF0101(config)#

    vlan 100

```
SwitchEF0101(config-vlan)#
```

```
exit
```

```
SwitchEF0101(config)#
```

```
no vlan 100
```

```
SwitchEF0101(config)#
```

```
exit
```

```
SwitchEF0101#
```

# VLAN Name

## Syntax

```
vlan name NAME
```

## Parameter

NAME Specify the name of the VLAN (Max. 32 chars).

## Default

```
vlan name VLANxxxx
```

## Mode

VLAN Configuration

## Usage

Configure the name of a VLAN entry.

## Example

This example sets the VLAN name of VLAN 100 to be `VLAN-onehundred`.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    vlan 100
```

```
SwitchEF0101(config-vlan)#
```

```
    name VLAN-one-hundred
```

```
SwitchEF0101(config-vlan)#
```

```
    exit
```

```
SwitchEF0101(config)#
```

# Switchport Mode

## Syntax

```
switchport mode ( access | hybrid | trunk [uplink] | tunnel )
```

## Parameter

<b>access</b>	Specify the VLAN mode to Access port.
<b>hybrid</b>	Specify the VLAN mode to Hybrid port.
<b>trunk</b>	Specify the VLAN mode to Trunk port.
<b>uplink</b>	Specify the Uplink property on this Trunk port.
<b>tunnel</b>	Specify the VLAN mode to Dot1Q Tunnel port.

## Default

Switchport mode trunk

## Mode

Port Configuration

## Usage

The VLAN mode is used to configure the port for different port roles.

## Access port

Accepts only untagged frames and join an untagged VLAN.

## **Hybrid port**

Supports all functions as defined in IEEE 802.1Q specifications.

## **Trunk port**

An untagged member of one VLAN at most, it is a tagged member of zero or more VLANs. If it is an uplink port, it can recognize double tagging on this port.

## **Tunnel port**

Port-based Q-in-Q mode. The configuration could be shown by the “show interface switchport” command.

## **Example**

This example sets VLAN mode to Access port.

```
SwitchEF0101(config)#  
    interface fa12  
SwitchEF0101(config-if)#  
    switchport mode access  
SwitchEF0101(config-if)#  
    exit  
SwitchEF0101(config)#  
    exit
```

SwitchEF0101#

show interfaces switchport fa12

Port : fa12

Port Mode : Access

Ingress Filtering : enabled

Acceptable Frame Type : untagged-only

Ingress UnTagged VLAN ( NATIVE ) : 1

Trunking VLANs Enabled:

Port is member in:

Vlan Name Egress rule

1 default Untagged

Forbidden VLANs:

Vlan Name

SwitchEF0101#

# **Switchport Hybrid PVID**

## **Syntax**

```
switchport hybrid pvid <1-4094>
```

## **Parameter**

<1-4094> Specify the port-based VLAN ID on the Hybrid port.

## **Default**

```
switchport hybrid pvid 1
```

## **Mode**

Port Configuration

## **Usage**

This command configures the hybrid port's PVID. The configuration could be shown by the "show interface switchport" command.

## **Example**

This example sets PVID to 100.

```
SwitchEF0101#
```

```
configure
```

```
SwitchEF0101(config)#  
    interface fa10  
SwitchEF0101(config-if)#  
    switchport mode hybrid  
SwitchEF0101(config-if)#  
    switchport hybrid pvid 100  
SwitchEF0101(config-if)#  
    exit  
SwitchEF0101(config)#  
    exit  
SwitchEF0101#  
    show interfaces switchport fa10  
Port : fa10  
Port Mode : General  
Ingress Filtering : enabled  
Acceptable Frame Type : all  
Ingress UnTagged VLAN ( NATIVE ) : 100  
Trunking VLANs Enabled:
```

Port is member in:

Vlan Name Egress rule

1 default Untagged

Forbidden VLANs:

Vlan Name

SwitchEF0101#

# Switchport Hybrid Ingress-Filtering Disable

## Syntax

```
switchport hybrid ingress-filtering disable
```

```
no switchport hybrid ingress-filtering disable
```

## Default

```
no switchport hybrid ingress-filtering disable
```

## Mode

Port Configuration

## Usage

This command per port configures the ingress-filtering status. This filtering is used to filter the frames coming from the non-member ingress port. The configuration could be shown by the "show interface switchport" command.

## Example

This example sets ingress-filtering to disable.

```
SwitchEF0101#
```

```
  configure
```

```
SwitchEF0101(config)#
```

```
  interface fa10
```

```
SwitchEF0101(config-if)#
  switchport mode hybrid
SwitchEF0101(config-if)#
  switchport hybrid ingress-filtering disable
SwitchEF0101(config-if)#
  exit
SwitchEF0101(config)#
  exit
SwitchEF0101#
  show interfaces switchport fa10
Port : fa10
Port Mode : General
Ingress Filtering : disabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 100
Trunking VLANs Enabled:
Port is member in:
Vlan Name Egress rule
```

1 default Untagged

Forbidden VLANs:

Vlan Name

SwitchEF0101#

# Switchport Hybrid Acceptable-Frame-Type

## Syntax

```
switchport hybrid acceptable-frame-type ( all | tagged-only | untaggedonly)
```

## Parameter

<b>all</b>	Specify to accept all frames.
<b>tagged-only</b>	Specify to only accept tagged frames.
<b>untagged-only</b>	Specify to only accept untagged frames.

## Default

```
switchport hybrid acceptable-frame-type all
```

## Mode

Port Configuration

## Usage

This command per port configures the acceptable-frame-type. The configuration could be shown by the "show interface switchport" command.

## Example

This example sets acceptable-frame-type to tagged-only.

```
SwitchEF0101#
```

```
configure
```

```
SwitchEF0101(config)#  
  interface fa10  
SwitchEF0101(config-if)#  
  switchport mode hybrid  
SwitchEF0101(config-if)#  
  switchport hybrid acceptable-frame-type taggedonly
```

```
SwitchEF0101(config-if)#  
  exit
```

```
SwitchEF0101(config)#  
  exit
```

```
SwitchEF0101# show interfaces switchport fa10
```

Port : fa10

Port Mode : General

Ingress Filtering : disabled

Acceptable Frame Type : tagged-only

Ingress UnTagged VLAN ( NATIVE ) : 100

Trunking VLANs Enabled:

Port is member in:

Vlan Name Egress rule

1 default Untagged

Forbidden VLANs:

Vlan Name

SwitchEF0101#

# Switchport Hybrid Allowed VLAN Add

## Syntax

```
switchport hybrid allowed vlan add VLAN-LIST [ ( tagged | untagged ) ]
```

## Parameter

VLAN-LIST	Specifies the VLAN list to be added.
( tagged   untagged )	Specifies the member type to tagged or untagged.

## Mode

Port Configuration

## Usage

This command per hybrid port configures the allowed VLAN list. The configuration could be shown by the "show interface switchport" command.

## Example

This example sets port fa10 VLAN to join the VLAN 100 as a tagged member.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

```
SwitchEF0101(config-if)# switchport hybrid allowed vlan add 100
```

```
SwitchEF0101(config-if)#  
    switchport hybrid allowed vlan add 100
```

```
SwitchEF0101(config-if)#  
    exit
```

```
SwitchEF0101(config)#  
    exit
```

```
SwitchEF0101#  
    show interfaces switchport fa10
```

Port : fa10

Port Mode : General

Ingress Filtering : disabled

Acceptable Frame Type : tagged-only

Ingress UnTagged VLAN ( NATIVE ) : 100

Trunking VLANs Enabled:

Port is member in:

Vlan Name Egress rule

1 default Untagged

100 VLAN-one-hundred Tagged

Forbidden VLANs:

Vlan Name

SwitchEF0101#

# **Switchport Hybrid Allowed VLAN Remove**

## **Syntax**

```
switchport hybrid allowed vlan remove VLAN-LIST
```

## **Parameter**

VLAN-LIST Specifies the VLAN list to be removed.

## **Mode**

Port Configuration

## **Usage**

This command per hybrid port configures to remove the allowed VLAN list. The configuration could be shown by the "show interface switchport" command.

## **Example**

This example sets port fa10 VLAN to leave the VLAN 100.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

```
SwitchEF0101(config-if)# switchport hybrid allowed vlan remove 100
```

```
SwitchEF0101(config-if)#  
    switchport hybrid allowed vlan remove 100
```

```
SwitchEF0101(config-if)#  
    exit
```

```
SwitchEF0101(config)#  
    exit  
SwitchEF0101#  
    show interfaces switchport fa10
```

Port : fa10

Port Mode : General

Ingress Filtering : disabled

Acceptable Frame Type : tagged-only

Ingress UnTagged VLAN ( NATIVE ) : 100

Trunking VLANs Enabled:

Port is member in:

Vlan Name Egress rule

1 default Untagged

Forbidden VLANs:

Vlan Name

SwitchEF0101#

# Switchport Access VLAN

## Syntax

```
switchport access vlan <1-4094>
```

## Parameter

<1-4094> Specifies the access VLAN ID.

## Mode

Port Configuration

## Usage

This command per Access port configures the native VLAN ID. The configuration could be shown by the “show interface switchport” command.

## Example

This example sets the Access port fa10 native VLAN ID to 100.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

SwitchEF0101(config-if)#

switchport mode access

SwitchEF0101(config-if)#

switchport access vlan 100

SwitchEF0101(config-if)#

exit

SwitchEF0101(config)#

exit

SwitchEF0101#

show interfaces switchport fa10

Port : fa10

Port Mode : Access

Ingress Filtering : enabled

Acceptable Frame Type : untagged-only

Ingress UnTagged VLAN ( NATIVE ) : 100

Trunking VLANs Enabled:

Port is member in:

Vlan Name Egress rule

100 VLAN-one-hundred Untagged

Forbidden VLANs:

Vlan Name

SwitchEF0101#

# Switchport Tunnel VLAN

## Syntax

```
switchport tunnel vlan <1-4094>
```

## Mode

Port Configuration

## Usage

The command per Tunnel port configures the native VLAN. The configuration could be shown by the "show interface switchport" command.

## Example

This example sets Tunnel port fa10 native VLAN to 100.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

```
SwitchEF0101(config-if)#
```

```
    switchport mode tunnel
```

```
SwitchEF0101(config-if)#
    switchport tunnel vlan 100
SwitchEF0101(config-if)#
    exit
SwitchEF0101(config)#
    exit
SwitchEF0101#
    show interfaces switchport fa10
Port : fa10
Port Mode : Dot1qtunnel
Ingress Filtering : enabled
Acceptable Frame Type : all
Ingress UnTagged VLAN ( NATIVE ) : 100

SwitchEF0101#

# Switchport Trunk Native VLAN

## Syntax

```
switchport trunk native vlan <1-4094>
```

## Mode

Port Configuration

## Usage

The command per Trunk port configures the native VLAN. The configuration could be shown by the "show interface switchport" command.

## Example

This example sets Trunk port fa10 native VLAN to 100.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

```
SwitchEF0101(config-if)#
```

```
    switchport mode trunk
```

```
SwitchEF0101(config-if)#  
    switchport trunk native vlan 100  
SwitchEF0101(config-if)#  
    exit  
SwitchEF0101(config)#  
    exit  
SwitchEF0101#  
    show interfaces switchport fa10  
Port : fa10  
Port Mode : Trunk  
Ingress Filtering : enabled  
Acceptable Frame Type : all  
Ingress UnTagged VLAN ( NATIVE ) : 100

SwitchEF0101#

# Switchport Trunk Allowed VLAN

## Syntax

```
switchport trunk allowed vlan ( add | remove ) ( VLAN-LIST | all )
```

## Parameter

( add   remove )	Specify the action to add or remove the allowed VLAN list.
( VLAN-LIST   all )	Specify the VLAN list or all VLANs to be added or removed.

## Mode

Port Configuration

## Usage

The command per Trunk port configures the allowed VLAN list. The configuration could be shown by the "show interface switchport" command.

## Example

This example sets Trunk port fa10 to add the allowed VLAN 100.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

```
SwitchEF0101(config-if)#  
switchport trunk allowed vlan add 100
```

```
SwitchEF0101(config-if)#  
exit
```

```
SwitchEF0101(config)#  
exit
```

```
SwitchEF0101#  
show interfaces switchport fa10
```

Port : fa10

Port Mode : Trunk

Ingress Filtering : enabled

Acceptable Frame Type : all

Ingress UnTagged VLAN ( NATIVE ) : 1

Trunking VLANs Enabled: 100

SwitchEF0101#

# Switchport Default-VLAN Tagged

## Syntax

```
switchport default-vlan tagged
```

```
no switchport default-vlan tagged
```

## Mode

Port Configuration

## Usage

The command per port configures the membership of the default VLAN to be tagged. The configuration could be shown by the "show interface switchport" command.

## Example

This example sets the Trunk port fa10 membership with the default VLAN to tagged.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

```
SwitchEF0101(config-if)#
```

```
        switchport default-vlan tagged
```

SwitchEF0101(config-if)#

exit

SwitchEF0101(config)#

exit

SwitchEF0101#

# Switchport Forbidden VLAN

## Syntax

```
switchport forbidden vlan ( add | remove ) VLAN-LIST
```

## Parameter

(add   remove)	Add or remove forbidden membership.
VLAN-LIST	Specify the VLAN list.

## Mode

Port Configuration

## Usage

The command per port configures the membership of the specified VLANs to the forbidden setting. The configuration could be shown by the “show interface switchport” command.

## Example

This example sets the membership of the VLAN 100 with port fa10 to forbidden.

```
SwitchEF0101#
```

```
    configure
```

```
SwitchEF0101(config)#
```

```
    interface fa10
```

```
SwitchEF0101(config-if)#
```

```
    switchport forbidden vlan add 100
```

```
SwitchEF0101(config-if)#
```

```

SwitchEF0101#

# Management-VLAN

## Syntax

management-vlan vlan <1-4094>

no management-vlan

## Parameter

<1-4094> Specify the VLAN ID of management-vlan.

## Default

In default, management VLAN 1 is created

## Mode

Global Configuration

## Usage

- (1) Set <1-4094> as management VLAN id; suggest to create the VLAN and make the port to be member of it firstly.
- (2) When use no command, restore management vlan to be default VLAN.
- (3) If want to see management vlan created ,use "show management-vlan"

## **Example**

**(1)** The following example specifies that management vlan 2 is created

```
Switch(config)#
```

```
    management-vlan vlan 2
```

**(2)** The following example specifies that management-vlan is restored to be the default VLAN.

```
Switch(config)#
```

```
    no management-vlan
```

# Show Management-VLAN

## Syntax

`show management-vlan`

## Parameter

None

## Default

None

## Mode

Global /Enable Configuration

## Usage

Display information about the management vlan.

## Example

The following example specifies the show management vlan.

Switch(config)#

```
show management-vlan
```

# MAC VLAN MAC

## Syntax

```
vlan mac-vlan mac A:B:C:D:E:F vlan <1-4094>
```

```
no vlan mac-vlan mac A:B:C:D:E:F
```

## Parameter

A:B:C:D:E:F specifies mac address to configure

<1-4094> Specifies the MAC VLAN ID to configure.

## Default

no mac vlan entries are configured

## Mode

Global Configuration

## Usage

Use the `vlan mac-vlan mac` Global Configuration mode command to add a `mac vlan` entry with a specified mac address. Use the `no` form of this command to remove the `mac vlan` entries. You can verify your settings by entering the `show vlan mac vlan` Privileged EXEC command.

## **Example**

The following example shows how to add a mac vlan entry

```
Switch(config)#
```

```
  vlan mac-vlan mac 0:0:0:0:0:1 vlan 100
```

```
Switch(config)#
```

```
  show vlan mac-vlan
```

```
MAC Address | VID
```

```
00:00:00:00:00:01 | 100
```

```
MAC VLAN Total Entry : 1
```

```
MAC VLAN Maximum Entry: 128
```

# MAC VLAN Enable

## Syntax

vlan mac-vlan

no vlan mac-vlan

## Parameter

None

## Default

MAC VLAN disabled on all interfaces

## Mode

Interface configuration

## Usage

Use the `vlan mac-vlan` Interface Configuration mode command to enable the MAC VLAN function on specified interfaces. Use the `no` form of this command to disable the MAC VLAN function. You can verify your settings by entering the `show vlan mac-vlan interfaces IF_PORTS` Privileged EXEC command.

## Example

The following example shows how to enable the MAC VLAN function on specified interfaces.

```
Switch(config)#
```

```
    interface range fa1,fa5
```

```
Switch(config-if-range)#
```

```
    vlan mac-vlan
```

```
Switch#
```

```
    show vlan mac-vlan interfaces fa1-6
```

```
Port | status
```

```
fa1 | Enabled
```

```
fa2 | Disabled
```

```
fa3 | Disabled
```

```
fa4 | Disabled
```

```
fa5 | Enabled
```

```
fa6 | Disabled
```

# Show VLAN MAC-VLAN

## Syntax

```
show vlan mac-vlan
```

## Parameter

None

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show vlan mac-vlan command in EXEC mode to display a specific MAC VLAN entry or All MAC VLAN entries.

## Example

The following example shows how to display MAC VLAN entry configurations.

```
Switch(config)#
```

```
    show vlan mac-vlan
```

```
MAC Address | VID
```

```
00:00:00:00:00:01 | 100
```

MAC VLAN Total Entry : 1

MAC VLAN Maximum Entry: 128

# Show MAC-VLAN Interfaces

## Syntax

```
show vlan mac-vlan interfaces IF_PORTS
```

## Parameter

IF\_PORTS Specify interface mac vlan status to display

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show vlan mac-vlan interface command in EXEC mode to display a specified interface or all interfaces MAC VLAN status.

## Example

The following example shows how to display the MAC VLAN interfaces settings.

Switch#

```
show vlan mac-vlan interfaces fa1-6
```

Port | status

fa1 | Enabled

fa2 | Disabled

fa3 | Disabled

fa4 | Disabled

fa5 | Enabled

fa6 | Disabled

# Protocol-VLAN Group

## Syntax

```
vlan protocol-vlan group <1-8> frame-type  
(ethernet_ii|llc_other|snap_1042) protocol-value VALUE  
no vlan protocol-vlan group <1-8>
```

## Parameter

<1-8>	Specify protocol vlan group to configure
(ethernet_ii llc_other snap_1042)	Specify protocol based frame type
VALUE	Specify protocol value to configure

## Default

no protocol vlan group are configured.

## Mode

Global Configuration

## Usage

Use the `vlan protocol-vlan group` Global Configuration mode command to add a protocol vlan group with specified proto type and value. Use the `no` form of this command to remove the protocol vlan group settings. You can verify your settings by entering the `show vlan proto-vlan` Privileged EXEC command.

## Example

The following example show how to configure protocol vlan group:

```
Switch(config)#
```

```
  vlan protocol-vlan group 1 frame-type ethernet_ji
```

```
protocol-value 0x806
```

```
Switch(config)#
```

```
  vlan protocol-vlan group 2 frame-type llc_other protocolvalue 0x800
```

```
Switch#
```

```
  show vlan protocol-vlan
```

Group ID	Status	Type	value
----------	--------	------	-------

1	Enabled	Ethernet	0x0806
---	---------	----------	--------

2	Enabled	LLC other	0x0800
---	---------	-----------	--------

3	Disabled	--	--
---	----------	----	----

4	Disabled	--	--
---	----------	----	----

5	Disabled	--	--
---	----------	----	----

6	Disabled	--	--
---	----------	----	----

7	Disabled	--	--
---	----------	----	----

8	Disabled	--	--
---	----------	----	----

# Protocol VLAN Binding

## Syntax

```
vlan protocol-vlan group <1-8> vlan <1-4094>
```

```
no vlan protocol-vlan group <1-8>
```

## Parameter

<1-8> Specify protocol vlan group to binding

<1-4094> Specifies the Proto VLAN ID to configure.

## Default

In default all group are not binding to any interface.

## Mode

Interface configuration

## Usage

Use the `vlan protocol-vlan binding` Interface Configuration mode command to bind a protocol VLAN Group on specified interfaces. Use the `no` form of this command to cancel protocol VLAN Group Binding. You can verify your settings by entering the `show vlan protocol-vlan interfaces IF_PORTS Privileged EXEC` command.

## Example

The following example shows how to configure Protocol VLAN function on specified interfaces..

```
Switch(config)#
```

```
    interface fa1
```

```
Switch(config-if)#
```

```
    vlan protocol-vlan group 1 vlan 2
```

```
Switch(config-if)#
```

```
    vlan protocol-vlan group 2 vlan 3
```

```
Switch#
```

```
show vlan protocol-vlan interfaces fa1
```

```
Port fa1 :
```

```
Group 1
```

```
Status : Enabled
```

```
VLAN ID : 2
```

```
Group 2
```

```
Status : Enabled
```

```
VLAN ID : 3
```

```
Group 3
```

Group 3

# Show Protocol VLAN Group

## Syntax

```
show vlan protocol-vlan [group <1-8>]
```

## Parameter

<1-8> Specify protocol vlan group to display

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show vlan proto-vlan command in EXEC mode to display the Proto VLAN group configuration.

## Example

The following example shows how to display a Proto VLAN group configuration.

Switch#

```
show vlan protocol-vlan
```

Group ID | Status | Type | value

1 | Enabled | Ethernet | 0x0806

2 | Enabled | LLC other | 0x0800

3 | Disabled | -- | --

4 | Disabled | -- | --

5 | Disabled | -- | --

6 | Disabled | -- | --

7 | Disabled | -- | --

8 | Disabled | -- | --

# Show Protocol VLAN Interfaces

## Syntax

```
show vlan protocol-vlan interfaces IF_PORTS
```

## Parameter

IF\_PORTS Specify interfaces protocol vlan to display

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show vlan mac-vlan interface command in EXEC mode to display the Protocol VLAN interfaces settings.

## Example

The following example shows how to display the Protocol VLAN interfaces setting.

Switch#

```
show vlan protocol-vlan interfaces fa1
```

Port fa1 :

Group 1

Group 1

Status : Enabled

VLAN ID : 2

Group 2

Status : Enabled

VLAN ID : 3

Group 3

Status : Disabled

Group 4

Status : Disabled

Group 5

Status : Disabled

Group 6

Status : Disabled

Group 7

Status : Disabled

Group 8

Status : Disabled

# Chapter 29

## Voice VLAN

# Voice VLAN State

## Syntax

voice-vlan mode ( auto | oui )

no voice-vlan

## Parameter

auto	Specify Auto voice vlan is enabled
Oui	Specify voice vlan enabled in oui mode

## Default

Auto voice vlan is enabled

## Mode

Global Configuration

## Usage

Use the voice vlan state global configuration command to set the type of voice VLAN that is functional on the device or disable voice VLAN entirely. Use the no form of this command to disable the voice vlan function. You can verify your settings by entering the show voice vlan Privileged EXEC command. To change voice vlan mode from auto to oui or oui to auto, you must first disable the voice vlan function.

## **Example**

The following example shows how to change the voice vlan state from auto to oui mode and vice versa.

```
Switch(config)#
```

```
    no voice-vlan
```

```
Switch(config)#
```

```
    voice-vlan mode oui
```

```
Switch# show voice-vlan
```

```
Administratate Voice VLAN state : oui-enabled
```

```
Voice VLAN ID : 100
```

```
Voice VLAN VPT : 5
```

```
Voice VLAN DSCP : 46
```

```
Voice VLAN Aging : 1440 minutes
```

```
Voice VLAN CoS : 6
```

```
Voice VLAN 1p Remark: disabled
```

# Voice VLAN ID

## Syntax

```
voice-vlan vlan <1-4094>
```

## Parameter

<1-4094> Specify the voice VLAN ID

## Default

The default Voice VLAN ID is DFLT VLAN ID.

## Mode

Global Configuration

## Usage

Use the voice vlan id global configuration command to configure the VLAN identifier of the voice VLAN. Statically, you can verify your settings by entering the show voice vlan Privileged EXEC command.

## Example

The following example shows how to set the Voice VLAN ID. Before proceeding, please make sure that VLAN EXIST is enabled.

```
Switch(config)#
```

```
voice-vlan vlan 128
```

Switch#

show voice-vlan

Administrative Voice VLAN state : oui-enabled

Voice VLAN ID : 128

Voice VLAN VPT : 5

Voice VLAN DSCP : 46

Voice VLAN Aging : 1440 minutes

Voice VLAN CoS : 6

Voice VLAN 1p Remark: disabled

# Voice VLAN VPT

## Syntax

**voice-vlan vpt <0-7>**

## Parameter

<0-7> Specify the vpt value to be advertised by LLDP

## Default

The default vpt value is 5.

## Mode

Global Configuration

## Usage

Use the voice vlan vpt global configuration command to configure the voice VLAN vpt value. You can verify your settings by entering the show voice vlan Privileged EXEC command.

## Example

The following example shows how to set the vpt value.

Switch(config)#

voice-vlan vpt 3

Switch#

show voice-vlan

Administrative Voice VLAN state : oui-enabled

Voice VLAN ID : 128

Voice VLAN VPT : 3

Voice VLAN DSCP : 46

Voice VLAN Aging : 1440 minutes

Voice VLAN CoS : 6

Voice VLAN 1p Remark: disabled

# Voice VLAN DSCP

## Syntax

```
voice-vlan dscp <0-63>
```

## Parameter

<0-63> specify a value of DSCP that will be advertised by LLDP

## Default

The default dscp value is 46.

## Mode

Global Configuration

## Usage

Use the voice vlan dscp global configuration command to configure the voice VLAN dscp value. You can verify your settings by entering the show voice vlan Privileged EXEC command.

## Example

The following example show how to set dscp value.

```
Switch(config)#
```

```
voice-vlan dscp 55
```

Switch#

show voice-vlan

Administrative Voice VLAN state : oui-enabled

Voice VLAN ID : 128

Voice VLAN VPT : 3

Voice VLAN DSCP : 55

Voice VLAN Aging : 1440 minutes

Voice VLAN CoS : 6

Voice VLAN 1p Remark: disabled

# Voice VLAN OUI Table

## Syntax

```
voice-vlan oui-table A:B:C DESCRIPTION
```

```
no voice-vlan oui-table [A:B:C]
```

## Parameter

A:B:C	Specify OUI Mac address to add or remove
DESCRIPTION	Specify description of the specified MAC address to the voice VLAN OUI table.

## Default

The default system has 8 oui addresses.

## Mode

Global Configuration

## Usage

Use the voice vlan oui-table global configuration command to add an oui mac address to the OUI Table. Use the no form of this command to remove all or certain specified oui mac addresses. You can verify your settings by entering the show voice vlan mode oui Privileged EXEC command.

## **Example**

This following example shows how to add OUI Mac.

```
Switch(config)#
```

```
    voice-vlan oui-table add 00:01:02 "Test"
```

```
Switch#
```

```
    show voice-vlan mode oui
```

```
Voice VLAN Aging : 1440 minutes
```

```
Voice VLAN CoS : 7
```

```
Voice VLAN 1p Remark: enabled
```

## **OUI table**

```
OUI MAC | Description
```

```
00:E0:BB | 3COM
```

```
00:03:6B | Cisco
```

```
00:E0:75 | Veritel
```

```
00:D0:1E | Pingtel
```

```
00:01:E3 | Siemens
```

```
00:60:B9 | NEC/Philips
```

# Voice VLAN CoS

## Syntax

```
voice-vlan cos <0-7> [remark]
```

```
no voice-vlan
```

## Parameter

<0-7>	Specify the voice VLAN Class of Service value in telephone oui mode.
remark	Specify that the L2 user priority is remarked with the CoS value.

## Default

The default cos value is 6, remark is disabled.

## Mode

Global Configuration

## Usage

Use the voice vlan cos global configuration command to configure the voice VLAN cos value and 1p remark function. You can verify your settings by entering the show voice vlan Privileged EXEC command.

## Example

The following example shows how to set cos value and enable the 1p remark function.

```
Switch(config)#
```

```
voice-vlan cos 7 remark
```

Switch#

show voice-vlan

Administrative Voice VLAN state : oui-enabled

Voice VLAN ID : 128

Voice VLAN VPT : 3

Voice VLAN DSCP : 55

Voice VLAN Aging : 1440 minutes

Voice VLAN CoS : 7

Voice VLAN 1p Remark: enable

# Voice VLAN Aging-Time

## Syntax

```
voice-vlan aging-time <30-1440>
```

## Parameter

<30-1440> Specify the voice VLAN aging timeout interval in minutes

## Default

The default aging-timeout value is 1440 minutes.

## Mode

Global Configuration

## Usage

Use the voice vlan aging-time global configuration command to configure the voice VLAN aging timeout. You can verify your settings by entering the show voice vlan Privileged EXEC command.

## Example

The following example shows how to set the aging time.

```
Switch(config)#
```

```
    voice-vlan aging-time 720
```

Switch#

show voice-vlan

Administrative Voice VLAN state : oui-enabled

Voice VLAN ID : 128

Voice VLAN VPT : 3

Voice VLAN DSCP : 55

Voice VLAN Aging : 720 minutes

Voice VLAN CoS : 7

Voice VLAN 1p Remark: enable

# Voice VLAN CoS Mode

## Syntax

voice-vlan cos ( src | all )

no voice-vlan

## Parameter

src	Specify QoS attributes are applied to packets with OUIs in the source MAC address.
All	Specify QoS attributes are applied to packets that are classified to the Voice VLAN.

## Default

The default all port in Src mode.

## Mode

Interface configuration

## Usage

Use the voice vlan cos mode Interface configuration command to configure the OUI voice VLAN cos mode. You can verify your settings by entering the show voice vlan Privileged EXEC command.

## **Example**

The following example shows how to configure voice packet QoS attributes on an interface.

```
Switch(config)#
```

```
    interface range fa1-3
```

```
Switch(config-if)#
```

```
    voice-vlan cos all
```

```
Switch#
```

```
    show voice-vlan mode oui interfaces fa1-8
```

```
Voice VLAN Aging : 1440 minutes
```

```
Voice VLAN CoS : 7
```

```
Voice VLAN 1p Remark: enabled
```

## **OUI table**

OUI MAC	Description
00:E0:BB	3COM
00:03:6B	Cisco
00:E0:75	Veritel
00:D0:1E	Pingtel

00:01:E3 | Siemens

# Voice VLAN Enable

## Syntax

voice-vlan mode

no voice-vlan

## Parameter

None

## Default

The default all port admin-status is disabled.

## Mode

Interface Configuration

## Usage

Use the voice vlan enable Interface configuration command to enable the OUI voice VLAN settings on an interface. Use the no form of this command to disable voice vlan on an interface. You can verify your settings by entering the show voice vlan mode oui Privileged EXEC command.

## Example

The following example shows how to enable the voice VLAN function in oui mode on an interface.

Switch(config)#

interface range fa1-3

```
Switch(config-if)#  
    voice-vlan  
Switch#  
    show voice-vlan mode oui interfaces fa1-8  
Voice VLAN Aging : 1440 minutes  
Voice VLAN CoS : 7  
Voice VLAN 1p Remark: enabled
```

### OUI table

OUI MAC	Description
00:E0:BB	3COM
00:03:6B	Cisco

# Show Voice VLAN

## Syntax

show voice-vlan

show voice-vlan mode auto

show voice-vlan mode oui [interfaces IF\_PORTS]

## Parameter

IF\_PORTS Specifies interfaces to display voice VLAN settings in oui mode

## Default

None

## Mode

Privileged EXEC

## Usage

Use the show voice vlan command in EXEC mode to display the voice VLAN status for all interfaces or for a specific interface if the voice VLAN type is an OUI.

## **Example**

The following example shows how to display the voice vlan auto mode and oui mode settings.

Switch#

```
show voice-vlan mode auto
```

Voice VLAN ID : 128

Voice VLAN VPT : 3

Voice VLAN DSCP : 55

switch#

```
show voice-vlan mode oui interface fa1-5
```

Voice VLAN Aging : 1440 minutes

Voice VLAN CoS : 7

Voice VLAN 1p Remark: enabled
