AC867 5GHz Ultra Long-Range Wireless Outdoor Customer Premises Equipment
IMPORTANT

To install this Access Point please refer to the Quick Installation Guide included in the product packaging.

Product Overview
Introduction

Key Features

• Up to 23/26 dBm transmit power enabling long range connectivity
• Supports IEEE802.11ac/a/n wireless standards with up to 867 Mbps data rate.
• Internal 19dBi high gain directional antenna
• Can be used with included PoE adapter or via 802.3at PoE 802.3at - capable switches. (EnStationAC)
• Can be used with included 24V PoE adapter (EnStation5-AC)
• Can be supply 802.3af power source used with included PoE adapter power adapter or via 802.3at PoE - capable switches (EnStationAC)
• Secured Guest Network option available
• Advanced 256-QAM technology to achieve optimal performance throughout ultra-long distance

Introduction

The EnStationAC/EnStation5-AC is a high-powered, ultra long-range 2x2 Wireless 802.11ac/a/n Outdoor Access Point with speeds up to 867 Mbps on both its high-powered 5 GHz radios. It can be configured as an: Access Point, Client Bridge or WDS (AP, Station & Bridge). The EnStationAC is designed to operate in a variety of outdoor environments. Its high-powered, long-range characteristics make it a cost effective alternative to ordinary Access Points that don’t have the range and reach to connect to a growing number of wireless CPEs who wish to connect to a business network. The EnStationAC supports the 5 GHz frequency band for communicating to other 5GHz frequency bands.

Maximum data rates are based on IEEE 802.11 standards. Actual throughput and range may vary depending on many factors including environmental conditions, distance between devices, radio interference in the operating environment, and mix of devices in the network. Features and specifications subject to change without notice. Trademarks and registered trademarks are the property of their respective owners. For United States of America: Copyright © 201 EnGenius Technologies, Inc. All rights reserved.
Access Points concurrently. Several EnStationACs can be networked in a campus setting using the 5 GHz band between countries. The EnStationAC is easy to install in virtually any location with its included PoE (Power over Ethernet) Adapter for quick outdoor installation. The EnStationAC enables network administrators to control its transmit power and features settings for selecting VHT80 bandwidth to perform AC transmission. The EnStationAC also supports wireless encryption including Wi-Fi Protected Access (WPA-PSK/ WPA2-PSK) Encryption and IEEE 802.1X with RADIUS.

System Requirements
The following are the Minimum System Requirements in order to configure the device.

- Computer with an Ethernet interface or wireless network capability
- Windows OS (XP, Vista, 7, 8, 10), Mac OS, or Linux-based operating systems
- Web-Browsing Application (i.e.: Internet Explorer, Firefox, Safari, or another similar browser application)
Package Contents

The EnStationAC package contains the following items:*  
• EnStationAC Customer Premises Equipment  
• PoE Adapter (EPA5006GP)  
• Pole Mount Strap  
• Wall Mount Bracket Base  
• Screw Sets Kit  
• Rubber  
• Sealing Nut  
• Dynamic Stick  
• Quick Installation Guide  
*(all items must be in package to issue a refund):

Package Contents

The EnStation5-AC package contains the following items:*  
• EnStationAC Customer Premises Equipment  
• PoE Adapter (EPA2406GP)  
• Pole Mount Strap  
• Wall Mount Bracket Base  
• Screw Sets Kit  
• Rubber  
• Sealing Nut  
• Dynamic Stick  
• Quick Installation Guide  
*(all items must be in package to issue a refund):
Technical Specifications - EnStationAC

Standard:
IEEE802.11ac/a/n on 5 GHz
IEEE802.3at
IEEE802.3af

Antenna
Internal 19dBi high gain directional antenna

Physical Interface
2 x 10/100/1000 Gigabit Ethernet Port with PoE support
   LAN(PoE) Port supports IEEE802.3at PoE Input
   LAN Port supports IEEE802.3af PoE Output

LED Indicator
Power
LAN 1
LAN 2
WLAN
WLAN LED (Weak, Medium, Strong)

Power Requirements
Include PoE Adapter, 54V/0.6A
IEEE802.3at support

Operation Modes
Access Point
Client Bridge
WDS

WDS Detail
WDS AP
WDS Bridge

WDS Station

Optimal Performance
Distance Control (Ack Timeout)
Multicast Supported
Data Rate Selection
Auto Channel Selection
BSSID Support

Easily Management
VLAN Tag / VLAN Pass-through
Guest Network
QoS: Complaint with IEEE 802.11e /WMM
RADIUS Accounting
Wireless STA (Client) connection list
Traffic Shaping (Per SSID)

Intuitive Tools
SNMP v1/v2c/v3 support
MIB I/II, Private MIB
Save Configuration as Default
CLI Support
WiFi-Scheduler/Auto Reboot
E-mail Alert

Reinforcement Security
WEP Encryption-64/128/152 bit
WPA/WPA2 Enterprise (WPA-EAP using TKIP or AES)
Hide SSID in beacons

Standard:
IEEE802.11ac/a/n on 5 GHz
IEEE802.3at
IEEE802.3af

Antenna
Internal 19dBi high gain directional antenna

Physical Interface
2 x 10/100/1000 Gigabit Ethernet Port with PoE support
   LAN(PoE) Port supports IEEE802.3at PoE Input
   LAN Port supports IEEE802.3af PoE Output

SSH

QoS (Quality of Service)
Complaint with IEEE 802.11e standard

Physical/Environment Conditions
Operating:
    Temperature: -20 °C to 60 °C (-4 °F to 140 °F)
    Humidity (non-condensing): 90% or less
Storage:
    Temperature: -30 °C to 80 °C (-22 °F to 176 °F)
    Humidity (non-condensing): 90% or less
Technical Specifications - EnStation5-AC

**Standard:**
IEEE802.11ac wave2/a/n on 5 GHz

**Antenna**
Internal 19dBi high gain directional antenna

**Physical Interface**
2 x 10/100/1000 Gigabit Ethernet Port with PoE support
LAN(PoE) Port supports 24V PoE Input

**LED Indicator**
- Power
- LAN 1
- LAN 2
- WLAN
- WLAN LED (Weak, Medium, Strong)

**Power Requirements**
Include PoE Adapter, 24V/0.6A

**Operation Modes**
- Access Point
- Client Bridge
- WDS

**WDS Detail**
- WDS AP
- WDS Bridge
- WDS Station

**Optimal Performance**
- Distance Control (Ack Timeout)
- Multicast Supported
- Data Rate Selection
- Auto Channel Selection
- BSSID Support
- Easily Management
- VLAN Tag / VLAN Pass-through
- Guest Network
- QoS: Complaint with IEEE 802.11e /WMM
- RADIUS Accounting
- Wireless STA (Client) connection list
- Traffic Shaping (Per SSID)

**Intuitive Tools**
- SNMP v1/v2c/v3 support
- MIB I/II, Private MIB
- Save Configuration as Default
- CLI Support
- WiFi-Scheduler/Auto Reboot
- E-mail Alert

**Reinforcement Security**
- WEP Encryption-64/128/152 bit
- WPA/WPA2 Enterprise (WPA-EAP using TKIP or AES)
- Hide SSID in beacons
- MAC address filtering, up to 32 MACs per SSID
- Wireless STA (Client) connection list
- Https Support
- SSH Support

**Technical Specifications - EnStation5-AC**

**Standard:**
IEEE802.11ac wave2/a/n on 5 GHz

**Antenna**
Internal 19dBi high gain directional antenna

**Physical Interface**
2 x 10/100/1000 Gigabit Ethernet Port with PoE support
LAN(PoE) Port supports 24V PoE Input

**LED Indicator**

- Hide SSID in beacons
- MAC address filtering, up to 32 MACs per SSID
- Wireless STA (Client) connection list
- Https Support
- SSH Support

Distance Control (Ack Timeout)
QoS (Quality of Service)
Complaint with IEEE 802.11e standard

Physical/Environment Conditions
Operating:
  Temperature: -20 °C to 60 °C (-4 °F to 140 °F)
  Humidity (non-condensing): 90% or less
Storage:
  Temperature: -30 °C to 80 °C (-22 °F to 176 °F)
  Humidity (non-condensing): 90% or less
Physical Interface

Dimensions and Weights
Dimension: 190mm (7.48”)
Height: 38mm (1.9”)
Weight: 527g (1.16 lbs)

1 WLAN Signal LED: Applied on Client Bridge/WDS
   (1) Red: Weak Signal: Connecting quality is bad.
   (2) Yellow: Connecting quality is Normal.
   (3) Green: Connection quality is Good.

2 LAN(PoE) Signal LED

3 LAN Signal LED of the 2nd Port

4 Power Signal:

5 LAN Port 1: Gigabit Ethernet port for RJ-45 cable.

6 LAN Port 2: Gigabit Ethernet port for RJ-45 cable.
Chapter 2
Before You Begin
In order to use the Access Point, you must first configure the TCP/IPv4 connection of your Windows OS computer system.

1a. Click the **Start** button and open the **Control Panel**

![Windows XP](image1)
![Windows 7](image2)

1b. Move your mouse to the lower right hot corner to display the Charms Bar and select the **Control Panel** in Windows 8 OS.

![Windows 8](image3)

1c. In **Windows 10**, click **Start** to select **All APPs** to enter the folder of **Windows system** for selecting **Control Panel**.

![Windows 10](image4)
2a. In Windows XP, click Network Connections.

2b. In Windows 7/Windows 8/Windows 10, click View Network Status and Tasks in the Network and Internet section, then select Change adapter settings.

3. Right click on Local Area Connection and select Properties.

4. Select Internet Protocol Version 4 (TCP/IPv4) and then select Properties.

5. Select Use the following IP address and enter an IP address that is different from the Access Point and Subnet mask, then click OK.
Note: Ensure that the IP address and Subnet mask are on the same subnet as the device.

For example: ENH220EXT IP address: 192.168.1.1

PC IP address: 192.168.1.2 - 192.168.1.255
PC Subnet mask: 255.255.255.0
**Apple Mac OS X**

1. Go to **System Preferences** (Which can be opened in the Applications folder or selecting it in the Apple Menu).

2. Select **Network** in the **Internet & Network** section.

3. Highlight **Ethernet**.

4. In **Configure IPv4**, select **Manually**.

5. Enter an IP address that is different from the Access Point and Subnet mask then press **OK**.

   **Note:** Ensure that the IP address and Subnet mask are on the same subnet as the device.

   For example: ENH900EXT IP address: 192.168.1.1
   
   PC IP address: 192.168.1.2 – 192.168.1.255
   
   PC Subnet mask: 255.255.255.0

6. Click **Apply** when done.
Hardware Installation

1. Remove the rear bottom panel.

2. Connect one end of the Ethernet cable into the main LAN port (PoE) of the Access Point and the other end to the AP Ethernet port on the PoE Adapter.

3. Connect the Power cord to the PoE Adapter and plug the other end in to an electrical outlet.

4. Connect the second Ethernet cable into the LAN port of the PoE Adapter and the other end to the Ethernet port on the computer.

5. Place the panel back into device

Note: The EnStationAC should ONLY be powered via Ethernet cable connected to included supports both IEEE 802.3at PoE (Power over Ethernet) or the included PoE Adapter. You may use either one as the power source. Do NOT use both at the same time.

Note: The EnStationAC can supply the 802.3af power source when used with included PoE Adapter.
Mounting the EnStation

Using the provided hardware, the EnStationAC can be attached to a wall or a pole.

1. EnStation
2. PoE Adapter & Power Cord
3. Bracket
4. Pole Mounting Strap
5. Screw Set Kit
6. Sealing Nut
7. Dynamic Stick
8. Rubber
Wall mounting the EnStation

1. Put the included rubber into the bracket.
2. Plug the dynamic stick into the bracket.
3. Screw the sealing nut and assembled parts, as well as tighten it.
4. Put the nock washer on the dynamic stick.
5. Assemble the mounting parts to the EnStation.
6. Determine the mounting location. Mark and drill two pilot holes aligning to the screw holes of the bracket.
7. Put wall anchors into the holes and insert screw into the wall anchor.
8. Screw and secure the bracket in the place.

Dimension:
A: Ø5.5*18 mm
B: Ø8*25 mm
Pole mounting the EnStation

1. Put the included rubber into the bracket.

2. Plug the dynamic stick into the bracket.

3. Screw the sealing nut and assembled parts, as well as tighten it.

4. Put the nock washer on the dynamic stick.

5. Assemble the mounting parts to the EnStation.

6. Thread the open end of the pole strap through the two tabs on the bracket.

7. Lock and tighten pole strap to secure bracket to the pole.
Chapter 3
Configuring Your Access Point
Configuring Your Access Point

This section will show you how to configure the device using the web-based configuration interface.

Default Settings

Please use your Ethernet port or wireless network adapter to connect the Access Point.

<table>
<thead>
<tr>
<th>IP Address</th>
<th>192.168.1.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username / Password</td>
<td>admin / admin</td>
</tr>
</tbody>
</table>

Web Configuration

1. Open a web browser (Internet Explorer/Firefox/Safari/Chrome) and enter the IP Address http://192.168.1.1

Note: If you have changed the default LAN IP Address of the Access Point, ensure you enter the correct IP Address.

2. The default username and password are admin. Once you have entered the correct username and password, click the Login button to open the web-base configuration page.

* The model name will be varied by different models

3. If successful, you will be logged in and see the EnStationAC User Interface.
Chapter 4

Building a Wireless Network
The EnStationAC has the ability to operate in various modes. This chapter describes the operating modes of the EnStationAC.

**Access Point Mode**
In Access Point Mode, EnStationAC behaves like a central connection for stations or clients that support IEEE 802.11a/b/g/n networks. The stations and clients must be configured to use the same SSID (Service Set Identifier) and security password to associate with the EnStationAC. The EnStationAC supports up to eight (8) SSIDs per band at the same time for secure access.

**WDS AP Mode**
**Client Bridge Mode**

The EnStationAC essentially acts as a wireless adapter that connects to an access point to allow a system of wireless access to the network in the Client Bridge mode. Since the computers are on the same subnet, the EnStationAC can broadcast to reach all end-devices.

If you use the client bridge mode in the EnStationAC, you can use the AP Detection feature to scan for Access Points within range. When you find an Access Point, configure the EnStationAC to use the same SSID and Security Password as the Access Point to associate with it.
WDS AP Mode

The EnStationAC also supports WDS AP mode. This operating mode allows wireless connections to the EnStationAC using WDS technology. In this mode, configure the MAC addresses in both Access Points to enlarge the wireless area by enabling WDS Link settings. WDS supports up to four (4) AP MAC addresses.
WDS Bridge Mode

In WDS Bridge Mode, the EnStationAC can wirelessly connect different LANs by configuring the MAC address and security settings of each EnStationAC device. Use this mode when two wired LANs located a small distance apart want to communicate with each other. The best solution is to use the EnStationAC to wirelessly connect two wired LANs, as shown in the following diagram.

WDS Bridge Mode can establish up to four WDS links, creating a star-like network.

**Note:** WDS Bridge Mode does not act as an Access Point. Access Points linked by WDS are using the same frequency channel. More Access Points connected together may lower throughput. This configuration can be susceptible to generate endless network loops in your network, so it is recommended to enable the Spanning Tree function to prevent this from happening.
WDS Station Mode

Station mode expands the WDS by receiving a wireless signal/service and sharing it through the Ethernet port.
Chapter 5

Status
Main Status

Save Changes

This page lets you save and apply the settings shown under Unsaved changes list, or cancel the unsaved changes and revert to the previous settings that were in effect.

Device Status

Clicking the Device Status link under the Overview menu shows the status information about the current operating mode.

- The Device Information section shows general system information such as Device Name, MAC Address, Current Time, Firmware Version, and Management VLAN ID

Note: VLAN ID information is only applicable in Access Point or WDS AP mode.
The **LAN Information** section shows the Local Area Network settings such as the LAN IP Address, Subnet mask, and DNS Address.

The **Wireless LAN Information 5 GHz** section shows wireless information such as Operating Mode, Frequency, and Channel. Since the EnStationAC supports multiple-SSIDs, information about each SSID, the ESSID, and security settings, are displayed.

**Note:** Profile Settings are only applicable in Access Point and WDS AP modes.

The **Statistics** section shows Mac information such as SSID, MAC address, RX and TX.

Connection

5 GHz Connection List

Click the connection link under the Overview menu displays the connection list of clients associated to the EnStationAC’s 5 GHz, along with the MAC addresses and signal strength for each client. Clicking Refresh updates the client list.

Note: Only applicable in Access Point and WDS AP modes.

WDS Link List

Click the connection link under the Overview menu. This page displays the current status of the WDS link, including WDS Link ID, MAC Address, Link Status and RSSI.

Note: Only applicable in WDS AP and WDS Bridge modes.

Realtime

The Realtime section contains the following options:

CPU Loading: 3 minutes CPU loading percentage information, it displays current loading, average loading and peak loading status. Left bar is loading percentage; button is time tracing. Interval is every 3 seconds
**Traffic Loading:** 2.4GHz and 5GHz and Ethernet port inbound and outbound traffic by current, average and peak time.

**Realtime Connection (Pkts):** Overview on current active network connections. It displays UDP and TCP packets information and other connection status. UDP connections curve is in blue; TCP connection curve is in green; others curve is in red. Below of chart shows connections source and destination.

**Client Bridge Connection Status**

Click the connection link under the Overview menu. This page displays the connection status between Access Point,
Chapter 6
Network
Basic IP Settings

IPv4/IPv6 Settings

This page allows you to modify the device’s IP settings.

<table>
<thead>
<tr>
<th>IPv4 Settings</th>
<th>IPv6 Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Network Setting</td>
<td>Static IPv6</td>
</tr>
<tr>
<td>IP Address</td>
<td>192.168.1.1</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>255.255.255.0</td>
</tr>
<tr>
<td>Gateway</td>
<td>192.168.1.1</td>
</tr>
<tr>
<td>Primary DNS</td>
<td>0.0.0.0</td>
</tr>
<tr>
<td>Secondary DNS</td>
<td>0.0.0.0</td>
</tr>
</tbody>
</table>

Primary/Secondary DNS: The primary/secondary DNS address for this device.

Save: Click Save to confirm the changes.

Spanning Tree Protocol (STP) Settings

This page allows you to modify the Spanning Tree settings. Enabling the Spanning Tree protocol will prevent network loops in your LAN network.

Spanning Tree Status: Enables or disables the Spanning Tree function.

Hello Time: Specifies Bridge Hello Time in seconds. This value determines how often the device sends handshake packets to communicate information about the topology throughout the entire Bridged Local Area Network.

Max Age: Specifies Bridge Max Age in seconds. If another bridge in the spanning tree does not send a hello packet for a long period of time, it is assumed to be inactive.

IP Network Settings: Select whether the device IP address will use a static IP address specified in the IP address field or be obtained automatically when the device connects to a DHCP server.

IP Address: The IP address of this device.

Subnet Mask: The IP Subnet mask of this device.

Gateway: The Default Gateway of this device. Leave it blank if you are unsure of this setting.
**Forward Delay**: Specifies Bridge Forward Delay in seconds. Forwarding delay time is the time spent in each of the Listening and Learning states before the Forwarding state is entered. This delay is provided so that when a new bridge comes onto a busy network, it analyzes data traffic before participating in the network.

**Priority**: Specifies the Priority Number. A smaller number has a greater priority than a larger number.

**Save**: Click **Save** to confirm the changes.
Chapter 7

Wireless
### Wireless

**Wireless Settings**

<table>
<thead>
<tr>
<th>Wireless Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Device Name</strong></td>
</tr>
<tr>
<td><strong>Country/Region</strong></td>
</tr>
</tbody>
</table>

**Device Name:** Enter a name for the device. The name you type appears in SNMP management. This name is not the SSID and is not broadcast to other devices.

**Save:** Click **Save** to confirm the changes.
This page displays the current status of the Wireless settings of the EnStationAC.

**Wireless Network**

**Operation Mode:** Select *Operation Mode*. The EnStation supports multi-operation modes: Access Point, Client Bridge, or WDS (WDS AP, WDS Bridge, and WDS Station).

**Wireless Mode:** Supports 802.11ac/a/n mixed mode in 5 GHz.

**Channel HT Mode:** The default channel bandwidth is 20 MHz/40/80 MHz. The larger the channel, the greater the transmission quality and speed.

**Extension Channel:** Select the upper or lower channel. Your selection may affect the Auto channel function.

**Channel:** Select the appropriate channel and frequency.

Select **Auto** to enable auto-channel selection.

**Transmit Power:** Sets the power output of the wireless signal.

**Data Rate:** Select a data rate from the drop-down list. The data rate affects throughput of data in the EnStationAC. Select the best balance for you and your network but note that the lower the data rate, the lower the throughput, though transmission distance is also lowered.

**RTS/CTS Threshold:** Specifies the threshold package size for RTC/CTS. A small number causes RTS/CTS packets to be sent more often and consumes more bandwidth.

**Client Limits:** Limits the total number of clients.

**Aggregation:** Merges data packets into one packet. This option reduces the number of packets, but also increases packet sizes.
**AP Detection:** AP Detection can select the best channel to use by scanning nearby areas for Access Points.

**Distance:** Specifies the distance between Access Points and clients. Note that longer distances may drop higher-speed connections.

**Save:** Click **Save** to confirm the changes or **Cancel** to cancel and return to previous settings.
SSID Profile

Current Profile: You can configure up to sixteen (16) different SSIDs (eight (8) per band). If multiple client devices will be accessing the network, you can arrange the devices into SSID groups. Click Edit to configure the profile and check whether you want to enable extra SSID.

SSID: Specifies the SSID for the current profile.

Suppressed SSID: Check this option to hide the SSID from clients. If checked, the SSID will not appear in the site survey.

Station Separation: Click the appropriate radio button to allow or prevent communication between client devices.

VID: Specifies the VLAN tag for each profile. If your network includes VLANs, you can specify a VLAN ID for packets passing through the Access Point with a tag.

VLAN Isolation: Restrict clients communicating with different VIDs by selecting the radio button.

L2 Isolation: Enable this function prevent client devices to communicate on both WLAN and LAN.

Save: Click Save to accept the changes.
Wireless Security

The Wireless Security section lets you configure the EnStationAC’s security modes: WEP, WPA-PSK, WPA2-PSK, WPA-PSK Mixed, WPA, WPA2, and WPA Mixed. It is strongly recommend that you use WPA2-PSK.

**Auth Type:** Select **Open System** or **Shared Key**.

**Input Type:**
- ASCII: Regular Text (recommended)
- Hexadecimal Numbers (For advanced users)

**Key Length:** Select the desired option and ensure that wireless clients use the same setting. Your choices are 64, 128, and 152-bit password lengths.

**Default Key:** Select the Key you wish to be the default. Transmitted data is **ALWAYS** encrypted using the Default Key; the other Keys are for decryption only. You must enter a Key Value for the Default Key.

**Encryption Key Number:** Enter the Key Value or values you wish to use. Only the Key selected as Default is required. The others are optional.

* Setting of WPA-PSK, WPA2-PSK and WPA-PSK Mixed (Pre-Shared Key):

**Encryption:** You may select AES, TKIP or Both (TKIP+AES) to be the encryption type you would like. Please ensure that your wireless clients use the same settings.

**Passphrase:** Wireless clients must use the same Key to
associate the device. If using ASCII format, the Key must be from 8 to 63 characters in length. If using HEX format, the Key must be 64 HEX characters in length.

**Group Key Update Interval:** Specifies how often, in seconds, the Group Key changes. The default value is 3600.

<table>
<thead>
<tr>
<th>Wireless Security - 5GHz</th>
</tr>
</thead>
<tbody>
<tr>
<td>Security Mode</td>
</tr>
<tr>
<td>Encryption</td>
</tr>
<tr>
<td>Group Key Update Interval</td>
</tr>
<tr>
<td>Radius Server</td>
</tr>
<tr>
<td>Radius Port</td>
</tr>
<tr>
<td>Radius Secret</td>
</tr>
<tr>
<td>Radius Accounting</td>
</tr>
<tr>
<td>Radius Accounting Server</td>
</tr>
<tr>
<td>Radius Accounting Port</td>
</tr>
<tr>
<td>Radius Accounting Secret</td>
</tr>
<tr>
<td>Interim Accounting Interval</td>
</tr>
</tbody>
</table>

* **Setting of WPA-Enterprise & WPA2-Enterprise (Pre-Shared Key):**

**Encryption:** Select the WPA encryption type you would like. Please ensure that your wireless clients use the same settings.

**Radius Server:** Enter the IP address of the Radius server.

**Radius Port:** Enter the port number used for connections to the Radius server.

**Radius Secret:** Enter the secret required to connect to the Radius server.

**Radius Accounting:** Enable or disable accounting feature.

**Radius Accounting Server:** Enter the IP address of the Radius accounting server.

**Radius Accounting Port** Enter the port number used for connections to the Radius accounting server.

**Radius Accounting Secret:** Enter the secret required to connect to the Radius accounting server.

**Interim Accounting Interval:** Specifies how often, in seconds, the accounting data sends.

**Note:** 802.11n does not allow WEP/WPA-PSK TKIP/WPA2-PSK TKIP security mode. The connection mode will automatically change from 802.11n to 802.11g.
### Wireless MAC Filtering

Wireless MAC Filtering is used to allow or deny network access to wireless clients (computers, tablet PCs, NAS, smartphones, etc.) according to their MAC addresses. You can manually add a MAC address to restrict permission to access the EnStationAC. The default setting is: **Disable Wireless MAC Filter**.

**Note:** Only applicable in Access Point and WDS AP modes.

<table>
<thead>
<tr>
<th>Wireless MAC Filter</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACL Mode</td>
</tr>
<tr>
<td><strong>Disabled</strong></td>
</tr>
</tbody>
</table>

**ACL Mode:** Determines whether network access is granted or denied to clients whose MAC addresses appear in the MAC address table on this page. Your choices are: Disabled, Deny MAC in the list, or Allow MAC in the list.

**MAC Address:** Enter the MAC address of the wireless client.

**Add:** Click **Add** to add the MAC address to the MAC address table.

**Delete:** Delete the selected entries.

**Save:** Click **Save** to apply the changes.
Wireless Advanced

Wireless Traffic Shaping

Traffic shaping regulates the flow of packets leaving an interface to deliver improved Quality of Service. The function will allow administrators to restrict the wireless bandwidth per SSID.

Enable Traffic Shaping: Check this option to enable Wireless Traffic Shaping.

Download Limit: Specifies the wireless transmission bandwidth used for downloading.

Upload Limit: Specifies the wireless transmission bandwidth used for uploading.

Save: Click Save to confirm the changes.
WDS Link Settings

Using the WDS (Wireless Distribution System) feature will allow a network administrator or installer to connect to Access Points wirelessly. Doing so will extend the wired infrastructure to locations where cabling is not possible or inefficient to implement.

**Note:** Compatibility between different brands and models of Access Points is not guaranteed. It is recommended that the WDS network be created using the same models for maximum compatibility.

**Also note:** All Access Points in the WDS network need to use the same Channel and Security settings.

To create a WDS network, please enter the MAC addresses of the Access Points that you want included in the WDS. There can be a maximum of four Access Points.

**Note:** Only applicable in WDS AP and WDS Bridge modes.

---

### Security:
Select None or AES from the drop-down list.

### AES Passphrase:
Enter the Key Values you wish to use. Other Access Points must use the same Key to establish a WDS link.

### MAC Address:
Enter the Access Point’s MAC address to where you want to extend the wireless area.

### Mode:
Select to disable or enable from the drop-down list.

### Save:
Click **Save** to confirm the changes.
Client Bridge/WDS Station Settings

**No.**: Display the setting value

**SSID**: You can click **scan** under AP detection to search perform the AP detection to select the proper SSID.

**Edit**: Click it to implement the advanced settings

Prefer **BSSID**: You can insert the prefer BSSID or enter the specific SSID to be associated with the Access Point.

**SSID**: You can implement the AP detection to select the proper SSID.

**Security Mode**: Select the correct security mode and insert the correct encryption type. Please refer the wireless security section in page 42.

**Save**: Click Save to accept the changes
Guest Network Settings

Adding a guest network allows visitors to use the Internet without giving out your office or company wireless security key. You can add a guest network to each wireless network in the 5 GHz ac/a/n frequencies.

SSID: Specifies the SSID for the current profile.

Suppressed SSID: Check this option to hide the SSID from clients. If checked, the SSID will not appear in the site survey.

Station Separation: Click the appropriate radio button to allow or prevent communication between client devices.

IP Address: The IP Address of this device.

Subnet Mask: The IP Subnet mask of this device.

Starting IP Address: The first IP Address in the range of the addresses by the DHCP server.

Ending IP Address: The last IP Address in the range of addresses assigned by the DHCP server.

RSSI Threshold: Enable the Fast Handover feature by ensuring that each client is served by at least one Access Point at any time. Access Points continuously monitor the connectivity quality of any client in their range and efficiently share this information with other Access Points in the vicinity of that client to coordinate which of them should serve the client best.

RSSI: Enter the RSSI (Received Signal Strength Index) in order to determine the handover procedure which the current wireless link will terminate. RSSI is an indication of the power level being received by the antenna. Therefore, the higher the RSSI number, the stronger the signal.
Chapter 8
Management
Management VLAN Settings

This page allows you to assign a VLAN tag to packets sent over the network. A VLAN is a group of computers on a network whose software has been configured so that they behave as if they were on a separate Local Area Network (LAN). Computers on VLAN do not have to be physically located next to one another on the LAN.

**Note:** Only applicable in Access Point and WDS AP modes.

**Management VLAN:** If your network includes VLANs, you can enable Management VLAN ID for packets passing through the Access Point with a tag.

**Save:** Click **Save** to confirm the changes or **Cancel** to cancel and return to previous settings.

**Note:** If you reconfigure the Management VLAN ID, you may lose your connection to the EnStationAC. Verify that the DHCP server supports the reconfigured VLAN ID and then reconnect to the EnStationAC using the new IP address.
Advanced Settings

SNMP Settings

This page allows you to assign the Contact Details, Location, Community Name, and Trap Settings for a Simple Network Management Protocol (SNMP). SNMP is a networking management protocol used to monitor network attached devices. SNMP allows messages (called protocol data units) to be sent to various parts of the network. Upon receiving these messages, SNMP compatible devices (called agents) returns the data stored in their Management Information Bases.

SNMP Enable/Disable: Enables or disables the SNMP feature.

Contact: Specifies the contact details of the device.

Location: Specifies the location of the device.

Community Name (Read Only): Specifies the password for the SNMP community for read only access.

Community Name (Read/Write): Specifies the password for the SNMP community with read/write access.

Trap Destination Address: Specifies the IP address of the computer that will receive the SNMP traps.

Trap Destination Community Name: Specifies the password for the SNMP trap community.

SNMPv3: Enables or disables the SNMPv3 feature.

User Name: Specifies the username for SNMPv3.

Auth Protocol: Selects the authentication protocol type: MDS or SHA.

Auth Key: Specifies the authentication key.

Priv Protocol: Selects the privacy protocol type: DES.

Priv Key: Specifies the privacy key for privacy.

Engine ID: Specifies the engine ID for SNMPv3.

Apply Save: Click Apply Save to apply the changes.
**CLI Settings**

<table>
<thead>
<tr>
<th>CLI Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLI</td>
<td>Enable</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>SSH Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSH</td>
<td>Disable</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>HTTPS Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>HTTPS</td>
<td>Enable</td>
</tr>
<tr>
<td>HTTPS Forward</td>
<td>Disable</td>
</tr>
</tbody>
</table>

**CLI**: The Command Line Interface (CLI) allows you to type commands instead of choosing them from a menu or selecting an icon.

**SSH**: Enable Secure Shell (SSH) to make secure, encrypted connections in the network. Secure Shell is a network protocol that allows data to be exchanged using a secure channel between two network devices.

**HTTPS**: Enable HTTPS to transfer and display web content securely. The Hypertext Transfer Protocol over SSL (Secure Socket Layer) is a TCP/IP protocol used by web servers to transfer and display web content securely.

**Email Alert**

You can use the Email Alert feature to send messages to the configured email address when particular system events occur.

Note: Do **NOT** use your personal email address as it can unnecessarily expose your personal email login credentials. Use a separate email account made for this feature instead.

**From**: Enter the email address to show the sender of the email.

**To**: Enter the address that you wish to send emails to.

**Subject**: Enter the text that you wish to appear in the email’s subject line.
**Username:** Enter the username for the email account that will be used to send emails.

**Password:** Enter the password for the email account that will be used to send emails.

**SMTP Server:** Enter the IP address or hostname of the outgoing SMTP server.

**Port:** Enter the SMTP port number to use for outbound emails.
Time Zone

Time Setting

This page allows you to set the internal clock of the EnStationAC.

- **Manually Set Date and Time:** Manually specify the date and time.
- **Automatically Get Date and Time:** Select and check whether you wish to enter the IP address of an NTP server or use the default NTP server to have the internal clock set automatically.
- **Enable Daylight Saving:** Check whether daylight savings applies to your area.

**Start:** Select the day, month, and time when daylight savings time starts.

**End:** Select the day, month, and time when daylight savings times ends.
Auto Reboot Settings

You can specify how often you wish to reboot the EnStationAC.

**Auto Reboot Setting**: Enables or disables the Auto Reboot function.

**Frequency of Auto Reboot**: Specifies how often you wish to reboot the EnStationAC by Min, Hour, Day or Week.

**Timer**: Select the day and enter the time you would like to reboot automatically.

**Save**: Click **Save** to apply the changes.
Wi-Fi Scheduler

The Wi-Fi Scheduler can be created for use in enforcing rules. For example, if you wish to restrict web access to Mon-Fri from 3pm to 8pm, you could create a schedule selecting Mon, Tue, Wed, Thu and Fri while entering a Start time of 3pm and End Time of 8pm to limit access to these times.

Status: Enables or disables the Wi-Fi scheduler function.

Wireless Radio: Select 2.4 GHz or 5 GHz from the drop-down list for the preferred band type.

SSID Selection: Select a SSID from the drop-down list.

Schedule Templates: Select a schedule template from the drop-down list.

Day(s): Place a checkmark in the boxes for the desired days or select the All Week radio button to select all seven days of the week.

Duration: The Start Time is entered in two fields. The first box is for hours and the second box is for minutes. The End Time is entered in the same format as the Start time.
Tools

Ping Test Parameters

This page allows you to analyze the connection quality of the EnStationAC and trace the routing table to a target in the network.

<table>
<thead>
<tr>
<th>Ping Test Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target IP / Domain Name</td>
</tr>
<tr>
<td>Ping Packet Size: 64 Bytes</td>
</tr>
<tr>
<td>Number of Pings: 4</td>
</tr>
</tbody>
</table>

**Target IP:** Enter the IP address you would like to search.

**Ping Packet Size:** Enter the packet size of each ping.

**Number of Pings:** Enter the number of times you wish to ping.

Traceroute Test Parameter

<table>
<thead>
<tr>
<th>Traceroute Test Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target IP / Domain Name</td>
</tr>
</tbody>
</table>

**Target IP:** Enter the IP address you would like to trace.

Speed Test Parameters

<table>
<thead>
<tr>
<th>Speed Test Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target IP / Domain Name</td>
</tr>
<tr>
<td>Time Period: 20 sec</td>
</tr>
<tr>
<td>Check Interval: 5 sec</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>IPv4 Port</th>
<th>IPv6 Port</th>
</tr>
</thead>
<tbody>
<tr>
<td>5001</td>
<td>5002</td>
</tr>
</tbody>
</table>

**Target IP:** Enter the IP address you would like to test.

**Start Ping:** Click **Start Ping** to begin pinging the target device (via IP).

**Traceroute Target:** Enter the IP address or domain name you wish to trace.

**Start Traceroute:** Click **Start Traceroute** to begin the trace route operation.
Device Discovery

This page allows you to discover devices from network for Operation Mode, IP Address, System MAC Address and Firmware version.
Account

This page allows you to change the EnStationAC username and password. By default, the username is: admin and the password is: admin. The password can contain from 0 to 12 alphanumeric characters and is case sensitive.

Account Settings

Administrator Username: Enter a new username for logging in to the New Name entry box.

Current Password: Enter the old password for logging in to the Old Password entry box.

New Password: Enter the new password for logging in to the New Password entry box.

Verify Password: Re-enter the new password in the Confirm Password entry box for confirmation.

Apply: Click Apply to apply the changes.

Firmware

Firmware Upgrade

This page allows you to upgrade the firmware of the EnStationAC.

To Perform the Firmware Upgrade:

1. Click the Choose File button and navigate the OS file system to the location of the upgrade file.
2. Select the upgrade file. The name of the file will appear in the Upgrade File field.
3. Click the Upload button to commence the firmware upgrade.

Note: The device is unavailable during the Firmware upgrade process and must restart when the upgrade is completed. Any connections to or through the device will be lost.
**Backup/Restore**

This page allows you to save the current device configurations. When you save your configurations, you also can reload the saved configurations into the device through the Restore Saved Settings from a file section. If extreme problems occur, or if you have set the AP incorrectly, you can use the **Reset** button in the Revert to Factory Default Settings section to restore all the configurations of the AP to the original default settings.

**Backup Setting:** Click **Export** to save the current configured settings.

**Restore New Setting:** To restore settings that have been previously backed up, click **Browse**, select the file, and click **Restore**.

**Restore to Default:** Click **Reset** button to restore the AP to its factory default settings.

---

### Backup/Restore Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Factory Setting</strong></td>
<td></td>
</tr>
<tr>
<td>- Backup Setting</td>
<td>Export</td>
</tr>
<tr>
<td>- Restore New Setting</td>
<td>Import</td>
</tr>
<tr>
<td>- Reset to Default</td>
<td>Reset</td>
</tr>
<tr>
<td><strong>User Setting</strong></td>
<td></td>
</tr>
<tr>
<td>- Back Up Setting as Default</td>
<td>Backup</td>
</tr>
<tr>
<td>- Restore to User Default</td>
<td>Restore</td>
</tr>
</tbody>
</table>

**Caution:** Please write down your account number and password before saving. The user settings will now become the new default settings at the next successful login.
User Setting

The function allows you to backup the current device configurations into the EnStationAC as the default value. If extreme problems occur, or if you have set the EnStationAC incorrectly, you can push the Reset button to revert all the configurations of the EnStationAC to the user default.

**Back Up Setting as Default:** Click Backup to backup the user settings you would like to the device’s memory for the default settings.

**Restore to User Default:** Click Restore to restore user settings to the factory standard settings.

**Note1:** After setting the current settings as the default, you should click the Restore to Default on the web interface for reverting the settings into the factory default instead of pushing the reset button.

**Note2:** Please write down your account and password before saving. The user settings will now become the new default settings at the next successful login.
Log

System Log

The EnStationAC automatically logs (records) events of possible interest in its internal memory. To view the logged information, click the Log link under the System Manager menu. If there is not enough internal memory to log all events, older events are deleted from the log. When powered down or rebooted, the log will be cleared.

Remote Log

This page allows you to setup the Remote Log functions for the EnStationAC.

Syslog: Enables or disables the syslog function.

Log Server IP Address: Enter the IP address of the log server.

Remote Log: Enable or disable the remote log service.

Apply: Click Apply to apply the changes.
Logout

Click **Logout** in Management menu to logout.

Reset

In some circumstances, it may be required to force the device to reboot. Click on **Reset** to reboot or to reset the EnStationAC.
Appendix
Appendix A

Federal Communication Commission Interference Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help

FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

IMPORTANT NOTE:

Radiation Exposure Statement

EnStationAC: This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 26 cm between the radiator & your body.

EnStation5-AC: This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 25 cm between the radiator & your body.
Appendix B - CE Interference Statement

Europe - EU Declaration of Conformity

This device complies with Directive 2014/53/EU issued by the Commission of the European Community.

- Declaration of Conformity

Please added certification standard in your user manual which depended on the test standards your device performed. or

- If the DoC should be a simplified version, please take below as reference –

Hereby, [Name of manufacturer] declares that the radio equipment type [designation of type of radio equipment] is in compliance with Directive 2014/53/EU.

The full text of the EU declaration of conformity is available at the following internet address:

- EN60950-1
- Safety of Information Technology Equipment
- EN50385
- Generic standard to demonstrate the compliance of electronic and electrical apparatus with the basic restrictions related to human exposure to electromagnetic fields (0 Hz - 300 GHz)
-EN 301 893

Broadband Radio Access Networks (BRAN); 5 GHz high performance RLAN; Harmonized EN covering essential requirements of article 3.2 of the R&TTE Directive
EN 301 489-1
Electromagnetic compatibility and Radio Spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements
- EN 301 489-17
- Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 17: Specific conditions for 2.4 GHz wideband transmission systems and 5 GHz high performance RLAN equipment

This device is a 5GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies.

In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services.

This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 – 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.

The frequency and maximum transmitted power in EU are listed as belows,

<table>

**Manufacturer Address:** No.500, Fusing 3rd Rd., Hwa-Ya Technology Park Kuei-Shan Dist., Taoyuan City, Taiwan (R.O.C.)
Appendix C - Professional Installation Instruction

Installation Personal
This product is designed for specific application and needs to be installed by a qualified personal who has RF and related rule knowledge. The general user shall not attempt to install or change the setting.

Installation Location
The product shall be installed at a location where the radiating antenna can be kept 25cm from nearby person in normal operation condition to meet regulatory RF exposure requirement.

Internal Antenna
Use only the antennas which have been approved by the applicant. The non-approved antenna(s) may produce unwanted spurious or excessive RF transmitting power which may lead to the violation of FCC limit and is prohibited.

Installation Procedure
Please refer to user’s manual for the detail.

⚠️ Warning:
Please carefully select the installation position and make sure that the final output power does not exceed the limit set force in relevant rules. The violation of the rule could lead to serious federal penalty.
